Summary table [Part of publication 'METAPSYCHOLOGY and PSYCHOLOGY, METAPSYCHIATRY and PSYCHIATRY, METAPSYCHOTHERAPY and PSYCHOTHERAPY. A new theory on psyche, mental disorders and their psychotherapy - in particular, schizophrenia.'] The links connect directly to corresponding sections of this publication. (2020-01-04)

Explanation

Overall, the table shows a new classification of the psyche and from left to right the possibilities of the emergence of mental illness, especially schizophrenia.

The ***leftmost vertical column*** shows the classification of psychical Relevant in Dimensions and Differentiations.

The Differentiations include everything psychically relevant at different levels. I have derived them from general language patterns, as I described in the chapter 'Metapsychology'.

The Dimensions represent basic meanings (a1-7) to each psychically relevant element. The bold-signed terms of cell Aa1: absolute (A) relative (R) and nothing (0) are keywords for all dimensions.

The ***horizontal rows*** show - from the left to the right - the development of psychical symptoms or disorders up to the schizophrenia.

The column A includes Metapsychology, B to D Psychology, columns E to N Metapsychiatry and columns O to V Psychiatry especially T-V schizophrenia.

'The neutral psychic Relevant' one finds on the top horizontal row leftmost. Here I listed general and personal 'neutral' forms, functions and actions in columns A to D in all aspects.

This corresponds essentially to the classification of the parts 'Metapsychology' (column A) and 'Psychology' in the above named publication.

I called the next biggest segment (columns E to K) Emergence and character of the If. The term If I understand as a new strange entity, created by 'inversions', which dominates psychic relevant (pr) systems, especially human. With Inversion, I denote a confusion of basic meanings. As basic meanings, I suppose the above-mentioned dimensions.

I.e., if absolute, relative or 0 resp. the other basic meanings are confused, I speak of inversion. The confusion of such basic meanings is ubiquitous. Typical examples are ideologies.

These, as well as similar dogmatic attitudes in families or in the individual, occur with an absoluteness claim that absolutizes something Relative and at the same time negates and excludes others.

This leads to fundamental reversals of meanings. The column I should show with the symbol ↕, that the Its Jouert realities and Jouert person, too.

The Its have another effect on the person in the long term than at the short term. In the column K the unfavorable long-term character of the It is shown

and his possible impacts in general from L to N and from O to S the impacts on a person. Finally, all possible symptoms of Schizophrenia are listed exemplarily from column T to V.

A process is important to understand the genesis of the disorders, which I called Spreading and compression ' and described closer in 'Metapsychiatry' - I.e. every inversion spreads in such a way, that it can cause all sorts of disturbances, as well as one disturbance can be caused by all sorts of inversions. Here I distinguish obligatory and optional effects

("main and secondary impact-directions" of the inversions). For example: One inversion in the dimension's aspect a4, caused by corresponding ideologies (e.g. in cell Ea4) causes obligatorily disturbances in this a4 aspect, but all other disturbances can be caused optionally. But, on the other hand, one disturbance is able to be caused also by all other inversions (see column F).
