Overall, the table shows a rare classification of psychic which in principle also applies to societies and, from left to right, the occurrence of possible disturbances.
The *leftmost vertical column* shows their classification in Dimensions and Differentiations.
The Differentiations include everything personal and social relevant. I have described them in detail, for example, in the chapter Metapsychology.
The Dimensions represent fundamental meanings (a1-7) to each personal and social relevant. The bold-signed terms of cell Aa1: absolute (A) relative (R) and nothing (0) are keywords for all dimensions.
The *horizontal rows* show - from the left to the right - the development of psychical and social disorders up to schizophrenia or similar social disorders.
The column **A** includes Metapsychology, B to D Psychology, columns **E** to **N** Metapsychiatry, and columns **O** to **V** Schizophrenia or similar social disorders.
The 'psychic Relevant' per se one finds on the top horizontal row leftmost. Here I listed general and personal 'neutral' forms, functions and actions in columns **A** to **D** in all aspects.
This corresponds essentially to the classification of the parts 'Metapsychology' (column **A**) and 'Psychology' (**B** to **D**) in the above named publication.
I called the next bigger segment (columns **E** to **K**) 'Emergence and character of the It ' I understand the term 'It' as a new strange complex entity, created by 'inversions', which dominates psychic or social relevant (pr) systems. With Inversion, I denote a confusion of fundamental meanings. As fundamental meanings, I suppose the above-mentioned dimensions.
I.e., if absolute, relative or 0 resp. other fundamental meanings are confused, I speak of inversion. The confusion of such fundamental meanings is ubiquitous. Typical examples are ideologies.
These, as well as similar dogmatic attitudes in families or in the same individual, occur with simultaneous claim that absolutizes something Relative and at the same time negates and excludes others.
This leads to fundamental reversals of meanings. The column **J** should show with the symbol ‡, that the Its make strange Insert Realities and Invert Personal or social forms.
The Its have another effect on the personal systems in the long term than at the short term. In the column **K** the unfavorable long-term character of the It is shown
and its possible impacts in general from **L** to **N** and from **O** to **S** the impacts on a personal system. Finally, all possible symptoms of Schizophrenia (or similar social disorders)
are listed exemplarily from column **T** to **V**.
A process is important to understand the genesis of the disorders, which I called 'Spreading and Compression' and described closer in 'Metapsychiatry' - i.e. every inversion spreads in such a way, that it can cause all sorts of disorders, as well as one disorder can be caused by all sorts of inversions. Here I distinguish obligatory and optional effects ("main and secondary impact-directions" of the inversions). For example: One inversion in the dimension's aspect a4, caused by corresponding ideologies (e.g. in cell Ea4) causes obligatorily disorders in this a4 aspect, but all other disorders can be caused optionally. But, on the other hand, one disorder is able to be caused also by all other inversions (see column F).
