Abstract

Notes: All parts of the whole preprint are published in https://www.new-psychiatry.com/
The `Summary table` provides a textual and tabular overview. This enables the reader to turn to subsequent chapters keeping the larger picture in mind.

In part Metapsychology I developed a general classification of everything that is psychically relevant.
• First, I hypothesize that everything that is psychically relevant is not only best expressed in language but can also be differentiated in analogy to basic language patterns. This 'Differentiation' can include everything that is psychically relevant.
• Second, I assign three basic meanings absolute, relative and nothing as keywords to each element that is psychically relevant. This is what I call the 'Dimensions' of the psychical Relevant. Since the respective Absolute is the determining factor for every psychical Relevant - as well as for every human being (!) - it is the focal point of this study.
In part Psychology, this general classification is transferred to the person. Again, I start from an analogy between language and psyche. This leads to some new interpretations of person and psyche.

In this part METAPSYCHIATRY, I also use the classification shown in part `Metapsychology` and start from the hypothesis that mental disorders are mainly caused by `Inversions` of the basic meanings, the dimensions, mentioned above. I.e., if absolute, relative or 0 meanings (or similar basic meanings) are confused, I speak of inversion. The confusion of such basic meanings is ubiquitous. Typical examples are ideologies. These, as well as similar dogmatic attitudes in families or in the individual, occur with claim to absoluteness that absolutizes something Relative and at the same time negates and excludes others. This leads to fundamental reversals of meanings: What was a Relative, now becomes a 'strange Absolute' (sA) and the negated becomes a 'strange Nothing' (s0). We will discuss it later, how strange Absolute and Nothing form pairs of opposites, 'all-or-nothing-complexes', which I have generally called 'It' and in the person 'strange Self' (sS), because these terms describe very well what is meant: 'it'= a general, unspecified cause of an occurrence (e.g., It makes me angry / sad / sick ...), 'strange Self'= the strange personal center.
Those Its, or strange Selves, represent new, strange, independent entities which can cause 'strange, second-rate Realities' (general and personal) and thus also mental disorders. If the entire psyche (i.e. all aspects of the psyche) is involved in this process, psychotic symptoms may ensue.

1 Summary table (Read with zoom!)
2 Not to be confused with the Freudian 'Id'. To the difference see 'The It' in this publication.
If, however, these events only affect one or a small number of aspects, then, depending on the nature of these aspects, symptoms will arise which are 'merely' neurotic, psychosomatic, or of another category. In my opinion, these diseases can only be explained if they are based on disturbances in the absolute sphere of a person. If a person is able to accept problems as a part of life, considering them to be only of relative importance, it is highly unlikely that this person will succumb to mental illness. However, when 'something' Relative is absolutized and becomes established as an Absolute, this Absolute will function as an It or strange Self which determines the person. This 'something' will be given too absolute a status, whilst the person will be attributed too relative a status. This 'something' will attain too much independence, whilst the person will become too dependent. This 'something' will become the subject, whilst the person becomes its object.

This 'something' will become personified, whilst the person will become 'something'. This 'something' will dominate the person and not the person the 'something'. This is the 'victory' of the Relative over a person.

To understand the genesis of such disorders, it is important to look into a process that I name 'Spreading and compression'. By spreading, every inversion may cause multiple disorders, just as a disorder may be caused by a variety of different inversions. This process is explained in more detail in part 'Metapsychiatry'.

As described in part PSYCHIATRY and summarized in the 'Summary Table', these 'Its' or strange-Selves can cause various diseases. It is in particular at the example of Schizophrenic psychoses that this becomes most obvious. From this point of view, I think the problem of the psychodynamic genesis of psychoses is solved theoretically and in principle.

In part Metapsychotherapy I analyze the 'psychotherapeutic quality' of the most relevant worldviews and religions.

In part Psychotherapy I will examine the most well-known psychotherapeutic schools of thought.

In the chapter 'Primary Psychotherapy' I introduce a theory that is free of ideology and which I believe to be the best against mental disorders.
METAPSYCHIATRY

'Every ideology is (potentially) deadly - it demands and justifies different victims.'
(Andrea M. Meneghin)

‘Man is an ideological animal.’ (Louis Althusser)

Introduction and Overview

I define metapsychiatry as a theory which reflects on psychiatric topics from higher points of view. These are above all worldview viewpoints. Therefore, one could also speak of ‘philosophy of psychiatry’. However, metapsychiatry also includes sociological, psychological, neurological, biological, and language spheres since these also deal with important psychiatric and psychological issues.

Note: The term ‘metapsychiatry’ is used with slightly different connotations in American English. That meaning is rarely used in German.3

While metapsychology focuses on things that are important to our soul, metapsychiatry focuses on what of those matters can make us mentally ill and how that happens, resp. which of the psychical relevant matters are pathogenic or ‘sick’ themselves. Generally speaking: Metapsychiatry is about everything that has to do with mental illnesses.

Since the causes of mental disorders may be in person or environment, a metapsychiatric view is indispensable about this topic. We may be affected by positive or negative, healthy or morbid factors in our surroundings, in our fellows and even in nature, which is often not taken into consideration. Therefore, usual psychoanalysis and psychotherapy can become one-sided. I reflect on this area from (general) linguistic, existential-philosophical and religious-scientific perspectives. Their common theme at issue here is what I call ‘the strange psychological Relevant’ or ‘strange, second-rate realities’, which include mental illnesses, too.4

I hypothesize that ‘inversions’ of basic meanings are the main causes of the emergence of these strange realities and thus mental disorders. Such reversals of basic meanings arise, above all, by attitudes that make a claim to absoluteness that excludes other attitudes. ‘Isms’ or ideologies are typical examples of this.5 If by that a Relative is absolutized then it

---

3 The term “metapsychiatry” is used in American English with other connotation. This meaning is hardly used in German.

"Metapsychiatry" is a term there for spiritual teaching and form of psychotherapy developed by the psychiatrist Thomas Hora (1914-1995) → https://en.wikipedia.org/wiki/Metapsychiatry. As a psychotherapeutic method, however, this is not the same as the metapsychiatry I described here, but the approach of Thomas Hora, who tries to apply psychotherapy to spiritual, religious, is also helpful. However, I have significant differences to his opinions, as he introduced them in his well-known book "Beyond the Dream".

4 I also use the Classification in these chapters as I have presented it in part ‘Metapsychology and Psychology’. (Look if necessary there).

5 I use the terms ‘ideologies’ or ‘isms’ as terms for all attitudes with claim to absoluteness, not only for social but also for the doctrinaire and the like attitudes in families and individuals!
becomes a strange Absolute (sA), and an actual Absolute becomes strange Nothingness (s0). The strange Absolute and the strange Nothingness are connected and constitute a new, dominant entity that I call 'It'.

These 'Its' produce strange (second-rate) realities - which form the basis of mental disorders. (e.g., 'It makes me sick'). Inversions and their effects may appear in an individual as well as in societies. While it is obvious that both spheres are interconnected, showing similar characteristics and dynamics, this study will primarily investigate the personal area, since this publication, our focus is on mental disorders.

Mental disorders emerge whenever a complex in a person (a combination of personal Its) has reached particular characteristics and extents. Of course, complexes found in society or individuals environment may cause mental illness as well - however, to do so, they need first to be internalized and personalized.

Following the logic of this argumentation, primary causes of pr changes/disorders and thus also mental disorders will ultimately (!) need to be sought in an Absolute. All other causes are necessarily second-rank - these are causes that are results of other causes. Therefore, the pathogenesis of mental disorders originally begins mostly with the patient's attitude to an Absolute and finally leads to disorders, of which some are mental disorders.

This is a very interesting and complicated process that will be discussed only briefly now.

The usual inversion has two parts, which are inextricably linked:

1) The absolutization of a Relative (R)
2) The negation of an actual Absolute (A¹).

To 1) Note: For the sake of simplicity, the 'Relative' stands in this publication for everything, which is not an Absolute.

By an inversion, something Relative is made absolute and can establish a strange Absolute (sA). Instead of the primacy of the Absolute and the subordination of the Relative (R), the Relative wins by the inversion the upper hand about the Absolute. As sA, the newly absolutized Relative displays very different characteristics than that which was originally purely Relative: on the one hand, it is inherently relative, on the other hand, it has some absolute traits since it is absolutized. Thereby, a strange new entity is created within reality or a person which is autonomous and dominant.

In the next step, this new sA constitutes a system of domination. As a new Absolute, it has the power to subdue other Relatives. It cut them off the influence of the actual A. Thus, it

- In this publication, the term 'ideology' has the meaning of a dogmatic worldview [https://en.wikipedia.org/wiki/Ideology], 2019.
- I will discuss the role of the negative Absolute (¬A) later.

Notes:
1. The It is always in three parts but may appear predominantly in two parts or one part. Therefore, I do not always speak of the whole It, but sometimes only of its parts: the strange Absolutes (sA), All and Nothing, etc., if their characteristics are in the foreground.
2. The abbreviations are also made clear in this Graphic or you can find all Abbreviations in the appendix.
3. These preliminary statements are further elaborated in the course of work.
4. As said - this 'It' is not identical to S. Freud’s ´Id´.
forms a system as a new strange Absolute (sA) with subordinated Relatives. Regarding the person: The new sA subordinates and changed the person in the area in which it prevails. We shall see later that this dominance of the sA about the person is not purely negative but also positive. This fact plays an important role in understanding mental disorders.

To 2) The establishment of this sA-system is accompanied by a negation of these three actual Absolutes:
1. The + A, 2. the –A, 3. the personal `absolute attitude'. (More on that later.)
Thus, the corresponding actual world/reality/personality is lost.

Thereby, however, the process is not completed. Since every new sA also becomes an opposite to an actual A (or to another sA), the Absolutes enter into a struggle for supremacy in the respective spheres of reality or person. This means that we are often exposed to very diverse contradictions and tensions, which are based on various Absolutes. Sometimes a sA may be fighting another sA but, sometimes it is making pacts with others sA, too - however, every sA will fall into opposition and contradiction to the actual Absolutes. At the same time, every sA or It is divided within itself into opposite parts. So long as the inversions persist, these will persist. It is for this reason that the world/ the person is unable to find peace and is prone to develop mental disorders.

We return to the hypothesis that a great number of different inner and outer worlds/realities exist: an actual world and many, strange, second-rate worlds and we find that all these worlds have absolute and relative (AR-) dimensions and consist of the 4 main aspects (BLQC) resp. of 23 individual aspects regarding the `General Differentials'. These different worlds are determined by their respective Absolutes, which form center and basis for the relative areas dependent on them. How we live, whether we are healthy or sick, will depend on such external and internal worlds/realities. But since an A always governs these worlds/realities, one might say that, first and foremost, our lives depend on these A. For an individual, the Absolutes in his/ her inner world have a direct, definitive influence, while the external world (environment) has a more indirect influence on the person. In this respect, the question is important how the person can shield their internal world against a pathogenic environment. Fortunately, the first-rate world is stronger than the strange worlds/ realities in the long term. As said: While the first-rate world is guided by A, the strange worlds are dominated by strange Absolutes. We will see below that the restoration

_______________________________

8 1. The actual absolutely Negative (−A) is not at issue here.
2. The terms strange and second rate (or ²) in this script have the same meaning. Sometimes I will use the one, sometimes the other term, to add interest for the reader.
Synonyms are also the terms actual and first-rate; while `ns' stands for `new, strange'; BLQC for being, life, quality, connections.
For more detail, please see the section `Metapsychology'.
(‘religio’) of the dominant position of the actual A is an essential objective of therapy.

Acquiring an understanding of the causes and nature of mental disorders may be difficult for the following reasons:

• The person is embedded in relationships and contexts and that’s why illness may have causes that are exterior to the individual.
• Causes of illness can have impacts for other people and not for the polluter himself.
• Inversions can cause many, not just mental disorders.
• The causes of mental disorders are often hidden, indirect and very complex.
• The affected is often not aware of the actual causes of mental disorders.
• Every inversion diversifies resp. spreads in such a way that it can cause many different disorders, and on the other hand one disorder can be generated by many different inversions.
• The negative may not have only negative impacts, and the positive may have negative impacts. That’s why the positive can also be a cause of mental disorders.
• Often, subjective experience and objective facts are not identical: This means that disorders might be experienced positive and health negative. But in an objective view, too, illnesses are also not absolutely negative and health not absolutely positive.
• Disorders or their causes may also be considered to be positive by society and therefore encouraged (e.g. workaholism).

The most commonly used terms and abbreviations here

A = The Absolute
R = The Relative
WPI = World resp. reality; Person and I
sA = strange Absolute
sS = strange Self
∀ = strange All
0 = Nothingness
It = complex of strange All and 0 (‘dyad’) or of pro and contra and 0 part (‘triad’) in the core.

Now I will exactly explain in the following paragraphs:
1. The ‘inversion’.
2. I describe how the inversion creates the strange, dominant entity that I call ‘It´ and how this ‘It´ changes reality and people.
3. I show how these ‘Its´ unite to form bigger complexes and which role they have with regard to the pathogenesis of mental disorders.
INVERSION - CONFUSION OF FUNDAMENTAL MEANINGS

"There are things of the first order and things of the lowest order. ... By exceeding the permissible space, things feel abused ... the things of the first order that have been pushed into the last place are dying of exhaustion. Conversely, however, ... it happens that things that have been pushed into the first place do not thrive but dry up and shatter."
José Ortega y Gasset.⁹

Definition:
By 'inversion' I mean confusion of fundamental meanings.¹⁰
This can lead to formation of strange, dominating entities ('It'), which produce strange, "inverted" realities (W²), like mental illnesses.

Similar definitions:
- Inversion = ideologizations/ Isms which are dominant in the affected person and connected with a negation of the actual Absolute.
- In religious terms: Due to an inversion, God and the Self are replaced by something other.

To some terms:
Inversion = Confusion of fundamental meanings.
Reversals = Results of inversions.
Examples: subject-object-reversal, person-thing-reversal, etc.
See all reversals in Summary table column U.

Special reversals:
- Reversal into the opposite
- Reaction formation = Reversal into the opposite as a defense.

Note: I'm sorry, in some places I do not exactly differentiate between inversions and reversals.

Which Factors Precede an Inversion?
The story of creation in the Bible is an example of the emergence of the aforementioned strange realities, the 'world'. The snake claims: "You will be like God." This idea tempts us to doubt God. To me, this is the basic structure of all inversions which may still serve as a model today. This basic pattern can generally be found in the most diverse ideologies, specifically in temptations by populist leaders, drug use, prostitution, and, quite unremarkable, in many everyday situations.¹¹
Those who seduce us offering a free bait so that we enthrone that which appears to be the Absolute, which will, however, eventually come to dominate us.
Thus, in the very beginning, before the inversion occurs, there is almost always a seductive

---

10 Here exemplary the confusion of the Absolute (A) and the Relative (R) which serve as guiding concepts.
11 In this publication, the term 'ideology' is a keyword for all inversive attitudes.
idea of a strange positive Absolute - or a threat through a strange negative Absolute, too. Can we not all of us relate to this story? Is not every one of us similar to Adam and Eve? Do we not all eat the fruit of the tree of knowledge every day, constructing ideologies which, for a short while, seem reasonable or beneficial to us but will, in the long term, prove harmful? (See also Theodicy).

Even after psychoanalysis, situations of temptation and failure are very important.

**Distinctions**

**Major and Daily Inversions**

It is not only the universal topics of humanity but also daily issues and worries such as illnesses, problems with our partners or children, success and failure, money or no money - all these subjects may invade the absolute-sphere and therefore acquire existential relevance. Inversions may be quickly changed, or they may last for a lifetime like a mindset that may be found in societies or families for several generations.

The range of possible inversion is nearly unlimited. I shall systematize them in a later section. The common denominator of all these behavior patterns (or rather, of their underlying attitudes) is the affected person's subordination to a strange Absolute and their negation of that which is the actual Absolute.

**Inversion and Behavior**

Existential attitudes, opinions, and beliefs are generally “located” in the absolute sphere of the person. Concrete behaviors depend upon them and are therefore relative in comparison to them. Thus, it is not possible to draw completely safe conclusions from concrete behaviors about primary attitudes.

In association with that topic, I also want to draw focus on the difference of a relative and an absolutely taken personal trait: A relative one is relativized by a higher positive Absolute (+A, God) - an absolutely taken not. Example: I can be scrupled, without it determining me.

**Inversion and Sin**

On the distinction between inversion and sin, I would briefly like to say that inversion is more comprehensive than sin and the affected is often unaware of its presence. Sin is commonly understood with an act of conscious, free will, as a violation of the Ten Commandments.

It is possible to have inversions without sinning.

Objectively, sin, as well as inversion, are of relative importance; subjectively, however, they are frequently of absolute importance. Inversion is by no means the negative or even evil, rather something strange and second-rate which often acts as an emergency solution despite all the disadvantages.

**Inversion and Repression (Freud)**
Freud’s concept of repression corresponds, in part, to the concept of inversion, provided the definition involves the repression of that which is an Absolute by that which is a Relative. According to the psychoanalytic conception, the repressed Absolute would then recede to the subconscious. A more extensive discussion of differences between Freud’s theory of repression and my analysis can be found in the unabridged German version.

**Inversion and 'Contra-inversion'**

The absolutization of something/someone is always automatically accompanied by an absolutization of the polar opposite and a negation. This means that with each strange Absolute, the relevant contrary and adversary opposites emerge - often only existing latently. I call the complexes thus formed 'It', which will be discussed later (→ It).

Every inversion may lead to the genesis of its polar opposites, dilemmas, paradoxes. (See e.g., Ambivalent and paradoxical reactions.)

The emergence of opposites also goes hand in hand with the emergence of fusions (mergers) and negation. Likewise, fusions generate opposites and negations as well as negations promoting opposites and fusions. (See e.g., Overview of possible interactions in W².)

In my opinion, the literature of this theme (KW `dialectics`) looks only at the dynamics of opposites and not at the simultaneous emergence of fusions and negations.

**Individual and Societal Inversions**

a) **Individual** inversions: the inversions or ideologizations first arise in the absolute spiritual sphere of a person but their effects can be found everywhere: in the spiritual and psychological sphere as well as in material and somatic spheres. The material and somatic changes can be secondary causes for further changes. However, the primacy of spiritual causation cannot better be proved than the primacy of material causation.

b) **Societal** inversions: the inversions affect not only individuals but also groups or whole societies. Here, they can be found, above all, as different ideologies or `isms`, as well as in countless attitudes and convictions which exist in small groups such as families. Globally, they are in social strata and societies, in successive generations, in the mainstream as much as in more marginal worldviews and ideologies.

In the following chapters, the character of ideologies, their `Its` and effects will be described. These ideologies are not only negative and have positive sides however, in the long term, they always prove more or less oppressive, require sacrifices, exclude others and are potentially pathogenic.

**Brief Illustrations of Inversions**

A Relative (R) becomes an Absolute (A) and an Absolute (A) becomes a Relative (R) or 0. Both are connected and form an It.
In due to inversion $R$ will grow more important than $A$, while $A$ will become less important than $R$ or turning into 0.

**Symbolic Images of Inversions**

The graphics illustrate inversions concerning different aspects of the dimensions involved. In essence, it is the same process that is portrayed in diverse ways. From left to right:

a) Left, we can see how $A$ loses its position in the center, while the Relative takes this place in the center.
b) A Relative becomes dominant over the Absolute. In the sphere of a person: $R$ becomes superior to $P$.
c) The Absolute is no longer regarded to be fundamental, while the Relative is regarded to be fundamental.
d) The Absolute is no longer thought to be first-rate but second-rate, while the Relative becomes first-rate.
e) The Absolute is no longer believed to be comprehensive, while the Relative is deemed to be comprehensive. Everywhere there are ‘displacements’ of the center and ‘breakages’ between the first-rate starting point and the new strange situation.

**Inversions and their Effects from the Perspective of Linguistic Analogies**

Grammatical and syntactical analogies remind us of the hypothesis that aspects of an individual's psyche are revealed by that which is represented in nouns, verbs, and adjectives

- i.e. `structures` (forms), `movement` and `qualities`; while psychical interconnections are expressed by syntax, by that which subjects and predicates represent.

One can examine the changes in the `structures` (forms), `movement`, `qualities` and interconnections are caused by the inversions.

Translating the steps previously mentioned into these linguistic analogies, one might say:

In a first step, a person who is a primary subject makes with inversion an object (the Relative) to a primary subject; thereby becoming himself an object.

As an object, the affected person can merely act as a secondary or second-rate subject (syntactic analysis).

Another analogy to grammar lies in the fact that the subject forces the object into a certain form by the aid of a verb as predicate. “The verb dominates the object.” (W. Jung).

The `Summary table` essentially follows this classification. For a more detailed analysis, please see the unabridged German version.

---

12 More precisely, it is, of course, only the words that are relevant to man.
How are Inversions Expressed? (Linguistic Analysis)

Often, inversions are not immediately recognized in every-day life, particularly since they might appear in different forms and modes of expression. Inversions emerge from certain attitudes and are expressed in very diverse ways: in specific patterns of behavior, ways of thinking and speaking, etc. Most clearly, inversions express themselves in the language which is employed in communication. Since inversions invariably affect the absolute sphere, they can be revealed in the inadequate use of following absolute words or absolute statements, like:

- Absolute nouns: God, devil, idol, saints and the sacred, or nominalized absolute adjectives.
- Absolute verbs of action like: to swear, adore, idolize, hate, curse, dogmatize, ideologize, etc.
- Absolute auxiliary verbs e.g., (absolute) must, will (want to do), must not.
- Absolute Adjectives: e.g., absolute, by oneself, actual, categorical, definite, primary, independent, total, surreal, irrelevant.
- Superlatives.
- Absolute adverbs (= circumstances) e.g., always, forever, never, impossible, unbelievable, definitely not, in no way, obvious, entirely clear, first-rank, certainly, etc.
- Absolute prefixes and suffixes e.g., un-, -less, etc.
- Universal-statements = sentences that include absolute words, proverbs or universal statements.

Systematization: Inversions (partly facultative)

I limit myself here in regard to the multiplicity of possible inversions to known ideologies. Besides, there are, as mentioned, countless other "private", nameless, dogmatized attitudes. [Notes: ↔ means inversion.]

I will discuss aspects one by one: Inversions of the dimensions, inversions of the differentiations and the units.

Inversions of the 7 Aspects of Dimensions

- a1) (Key aspect) Absolute and Relative are mixed up /mistaken (↔)
  Relative (R) becomes strange Absolute (sA) and the actual Absolute (+A, −A and absolute attitude´) becomes nothing (0).
  Source: all ideologies, some worldviews.
- a2) The Self ↔ the other.
  A strange other is seen as an actual Self, as actual identity, as identical to itself - and the actual Self is seen as strange or irrelevant.
  e.g., Determinism, operationalism, some philosophies of identity.
- a3) The actual ↔ the possible.
  The possible, artificial, fake, surreal will be denoted as actual, real, etc. - and the first-rate realities/ truths will be seen as irrelevant.
  e.g., Realism, objectivism, positivism, antirealism, idealism, relativism, formalism.
- a4) Uniform ↔ partial.
Parts are treated as a whole - and the whole as a part.  

- a5) Unconditional ↔ conditional.  
Conditional becomes unconditional and vice versa.  
e.g., Monism, holism, universalism, integralism, totalitarianism, expansionism.  
- a6) First-rate ↔ second-rate.  
Second-rate becomes first-rate and vice versa,  
e.g., If one makes a main thing to a minor matter and a minor matter to the main thing. Further: radicalism, extremism.  
- a7) Independent ↔ dependent.  
Dependent things become autonomous - and the independent things are seen as dependent or irrelevant.  
e.g., Autopoiesis, evolutionism, philosophy of immanence.  

**Inversion of the Main Differentiations**  
- I. Being (spirit ↔ matter).  
F.e: idealism, immaterialism, ontologism, spiritualism / materialism, naturalism, formalism, structuralism.  
- II. Live ↔ function.  
e.g., Hylozoism, dynamism, energetics, functionalism, partly philosophies of life, vitalism.  
- III. Absolute ↔ relative qualities.  
e.g., Perfectionism, positivism, idealism / negativism.  
- IV. Subject ↔ object-connections.  
Relative connections are treated like absolute connections and vice versa.  
Objects are treated like subjects and vice versa.  
e.g., subjectivism, objectivism, relationism, epiphenomenalism.  

**Inversion of the Units**  
- On 1. Everything ↔ something.  
Something is seen as everything - and everything is seen as nothing.  
- On 2. Transcendence (God, heaven, spirit) ↔ immanence (world, matter, partly humanity).  
Things are seen as people and vice versa.  
- On 4. I⁴ ↔ I⁶ and I ↔ others.  
Others/people or the own I are absolutized - and the own or strange Absolute is being negated.  
'Ego' as a common term for an absolutized I.  
- On 5. Spirit ↔ soul, body of a person.  
The human body (or parts of the body) or functions such as look, physical capability, or well-being are absolutized - and the actual Absolute spirit, such as the unconditional dignity of the person is relativized or negated.  
Additional aspects such as ownership, morality, ability, etc: see unabridged German version.
Importance of Inversions for the Development of Mental Illnesses (interim result)

I am convinced that inversions, besides the ~A, are the most common and primary (!) cause for mental disorders.

On the other hand, the connection between inversions and mental disorders is never definite, because:
- Every inversion also has positive effects! Therefore, inversion is definitely not the bad or evil but more like an emergency solution.
- Also, the +A can have negative results/ consequences, comparable to the pain we have to bear at the dentist.
- The decisive factor for the pathogenesis of mental disorders is not some kind of mistake or confusion per se but that those are connected to the Absolute. Confusions of the Relative are ubiquitous. Everything 'earthly', our every-day-life, our communication, our way of thinking and our perception is more or less alienated, paradoxical, senseless, traumatizing, etc without us getting ill automatically. Only if something becomes of absolute relevance, it dominates over us and if it is not compensated by something other, mental disorders may occur.
IT - THE NEW STRANGE ENTITY

Note: Readers, who do not wish to go into the topic deeply, may skip this chapter and continue reading with the chapter "The personal It and the strange Self".

Introduction

In this chapter, I will discuss in more detail the consequences of inversions. From inversions can arise a new entity, a complex, which creates new, strange realities, so also new, strange personal parts.

This new, strange, dominant entity I call 'It'. The inversion of fundamental meanings thus leads to the formation of something that has materialized and can act and function by itself. Something was created, that disconnected itself from the creator and is no longer the creator's objects but a new, strange, independent subject, with its own impact and with power to expand. In the role of the new subject, it dominates us humans or our surroundings that now become objects. This 'It' has its own structures and effects, which I will describe later.

The It in general

Why Did I Choose the Term 'It'?

The term 'it' denotes an unspecified cause of an occurrence. W. Jung: "The pronoun (it) is only a formal, empty subject [Wahrig: 'seeming subject'] associated with ... impersonal verbs ... but also with verbs of physical or mental sensations, verbs of lack or need ...".

I distinguish between a 'little it' and a 'big It'. The 'little it' is subjugated to the I-self. The 'big It' that is at issue here dominates the Ego. Therefore the term 'It' is used here to describe an 'it' with absolute importance for a person. It is created by inversion, which causes a 'little it'/ something to be absolutized and to become a 'big dominating It'. Then I do no longer own it but It owns me. Therefore, this It is the cause for an event within a person that the person cannot directly control or influence. In every-day language, we also often use the term It to describe that something (usually something unknown) controls us: “It kills me on the inside.”, “It makes me sick.”, “It confuses me.” and so on. Other than the term I, It also indicates indeterminacy and subconsciousness. All these characteristics match very well with the 'It' described in this publication. These It play a special role in the emergence of mental disorders. (See later more).

14 Duden 1973, KZ 1148.
15 W. Jung, p. 337.
‘It’ with Similar Meaning by Other Authors

• The It, described by S. Freud, applies to one of the three instances besides I and super-ego.16

• G. Groddeck describes it in a similar way. As far as I know, he mentioned the important role of the It within our inner life in “Book of the It”, even before Freud did.17

• Paul Auster: “What that ‘it’ referred to Quinn has never known. A generalized condition of things as they were, perhaps; the state of ‘it-ness’ that was the ground on which the happenings of the world took place.” (New-York Trilogy, p. 135).

• Georg Büchner in ‘Danton’s Death’: “What is it in us, that lies, steals and murders? We are puppets and unknown powers pull the strings; ... we are not ourselves!” (Act 2, Scene 5).

• Thomas Wolfe wrote about “… that something that lived and wove in the dark, while the people slept, which happened secretly, rejoicing and victorious all over the country …”.18

• A.J. Cronin: “The stuff is in my body. It’s myself... I am the it itself.”19

• In the book LTI, Victor Klemperer describes the language of the Third Reich. I think language and spirit of the Third Reich are also the language and spirit of a special It (or –A). His description of a Nazi-march in LTI is an example of two typical characteristics of the It: hyper-identity and juxtaposition of lifelessness and 'hyper-vitality'.20

• The features that Stefan Zweig gives the ‘daemon’ in his book ‘The Struggle with the Daemon’ essentially correspond to an ‘It’.

• It is typical, that also a horror film (by Stephen King) is called ‘It’.

Brief Characterization and Definition of the It

It = complex, originated by inversions, which became independent and dominates and changes WPI.21

It imitates first-rate Absolutes but has completely different characteristics and effects.

It is the fundamental basis for mental disorders.

However, the It is not “the evil” or solely negative because it also contains positive sides, which are very important for its persistence and penetrance.

It is among many other characteristics - strange and divided.

---

16 Freud called the German ‘Es’ in Latin ‘Id’.
   The term ‘It’ used by me includes the Freudian Id, but it is however much broader.
18 In: 'Death, the Proud Brother'.
19 A.J. Cronin in 'The Adventure of a Black Bag'.
20 Klemperer about language in general: “Language writes and thinks not only for me, it also distracts my feeling, it controls my entire spiritual being ...” (p.24)
21 WPI = world, person and I.
An It consists of three opposite parts: a pro-sA, a contra-sA, and s0-part\(^22\) ("triad"), although it may also appear as a one-part or two-part ("monad" or "dyad"). Why does an It always consist of three parts? In other words, why does an inversion always create three opposites?

Example: I idealize one matter (+ absolutization). This matter, however, as a Relative, has apart from the absolutized positive, also a negative and a negated side, and these two sides are also absolutized (‒ and 0 absolutization).

At the beginning of absolutization, the It often appears one-sided / one-part (like a 'monad'), later often bipartite (like a 'dyad'), although in reality, it has three parts. Rarely one experiences the It with all three parts as 'triad' because mostly one part dominates.

In one part, like a monad, the It appears when one of its parts (pro, + part, contra, - part or 0 part) is activated and the other two are repressed or displaced. For example, if I absolutize my strength, then I must negate my weaknesses and everything else that contradicts strength. But the repressed or negated parts remain latent.

Bipartite (like a 'dyad') one experiences the It when two of its parts are simultaneously "activated", e.g., everything and nothing, pro and contra, pro and nothing, contra and nothing.

In this way, the It has many opposites and different effects, depending on which part dominates. (I will explain these processes in more detail later.)

![Diagram of It parts](image)

The figure shows the different designations of It-parts and how they relate to each other. The parts of the It, on the one hand, opposing each other but are interdependent on the other. In this way, the It has many contradictions, depending on which part dominates.

For example, regarding aspect a4: The It is the dominant inverted, the too divided (± all or nothing) and the too fused. And this is how it works: inverting (reversing), splitting and fusing.

In this way, the It acts in all WPI areas: it makes inversions (reversals), divisions (opposites) and mergers (the same) with realities, people and with the ego.

I repeat:

In the absolute sphere, prevail other laws and characteristics as in the relative sphere. If something Relative has penetrated into the absolute sphere and is taken absolutely, although it is not an Absolute, then a very peculiar structure arises, a hermaphrodite, a strange, which is inherent but not identical with the actual being, that has its own characteristics and dynamics, which partly agree with those of the actual being but partly

\(^{22}\) 1. Synonym used: pro = +, contra = −.

2. sA = strange Absolute

3. I also count to the pro-sA the asA = absolutistic sA (also hyper-A); To contra-sA, I also count the rsA = relativistic sA (= strange relativistic one), which I will discuss later.
oppose them. The greater the distance between a sA and the +A, the smaller the accordance.

The (p)It has strange characteristics, esp. those of a material strange absolute, strange Self. As such, it is no longer primarily the actual spiritual and the living, but, above all, strange material or thing and functional. The materialization also means that it is no longer directly available and changeable but only to change in the long term by new attitudes. (Detailed representation of the character of the It see in ‘Summary table’, column H.)

That is also, the more the It is removed from the influence of the +A, the less exist the laws of life or the living spirit but mechanical or physical laws, since now it is less about spirit but about materialized being and its functions. In parallel, chaos arises.

The Its are like parasites that became part of the host organism (WPI), although they still remain strange and dominant; Although both, the parasites and the host organism, entered into a dependency in which both have advantages and disadvantages, it is more beneficial for the parasites (the It) and contains some kind of danger for the host (e.g., to become ill). The It dominates certain spheres of reality, so also the person and sometimes submits under them (but ultimately to its own advantage).

The It creates and binds its own Relatives and forms with them a separate unit (like nucleus and cytoplasm of the cell).

The It tries to expand itself and to dominate other It.

The It forms further Co- or Contra- or 0-forms, which act similar or in opposition to the primary forms.

The It forms bigger complexes and second-rate units, systems, personalities - all of which together form second-rate realities/ worlds.

Possible synonyms for the It in General:

Dyad, triad, parasite, symbiont, paper tiger, chimera, delusion, fool's paradise, phantom, a figment of imagination, bastard, miscarriage, new strange, self-deceit.

Symbol of It in equilibrium: ☯.

I Ideologies as Examples for Collective It

Ideologies (‘Ism’) are dogmatized worldviews, which means that they are determined by strange Absolutes. Ideologies, as collective It, are the main representatives of the It.

The person as the cause of such ideologies becomes the last authority.

As mentioned I see in ideologies (‘official’ like ‘private’) essential causes for mental disorders.

Systematized I have listed them in the ‘Summary table’ column E.

See also ‘Which Its correspond to which ideologies’.

23 No wonder we become confused or even paranoid when we are "infested" by them.
The Emergence of the It

Introduction

I repeat: The absolutization of a Relative or the negation of an actual Absolute can be the beginning of the emergence of the It. It does not matter, whether it started with a break-in of the Relative into the absolute-sphere, which caused a loss of A, or if it started with a negation of an actual A, which enabled the R to break into that “empty space” of the absolute-sphere. The absolutized R and the negated A become sA and s0 and form together a new, strange instance: the It.

As said, the It differentiates and dimensionates itself by the (+ or −) all-or-nothing principle. The new strange Absolutes (resp. ‘All´) and 0 become the centers of new, strange personal or impersonal realities/worlds, which they dominate. The inversions are like acts of creation that enable to establish a variety of new strange worlds/realities. These second-rate realities have their own characteristics and rules that we want to get to know better in the following paragraphs. They live or die depending on their centers - the It. Although these processes are very complex and run side-by-side in many spheres, I have to divide them into separate steps for the sake of comprehension before I present an overall view. The different steps should be understandable when remembering the hypotheses, that every reality is AR dimensioned and BLQC differentiated.

In the following section, the emergence of all possible It-parts and their sides will be presented. At first, I will discuss the emergence of a two-part It (dyad) to then discuss the emergence of a three-part It (triad) an finally their different sides.

The Emergence of the Parts of the It

Depending on the kind of inversion, the It may appear as dyadic It (all or nothing), or as triadic It (pro-sA, contra-sA and 0 resp. asA, rsA and 0).

All-and-Nothing Emergence

In the following paragraph, I will describe how inversions originate a dyad (‘dyadic/ binary It´) in the form of ‘All and Nothing´. These two parts of the It are created by the basic mechanism of the inversion:

By totalization and by negation = all-or-nothing mechanism.

The following illustration will make it easier to understand that process.

The graphic shows the emergence of the new dimensions of the It, referring to the all-or-nothing concept: From an absolutized Relative¹ or totalized All¹ emerge strange All² - and a negated All¹, and something Relative¹ become strange Nothing (0). The underlying inversion is illustrated by using a gray color.
This all-or-nothing is a main characteristic of any It. Both parts of the dyad are connected with each other closely. They are basically two sides of the same thing, of the It. Although they are as if they were welded together, they are also separated from each other and are opposites. They are friends and enemies at the same time. They depend on each other and destroy each other. However, they coincide in their shared opposition against the first-rate AR resp. reality¹.

There are no nuances between all-or-nothing.
Because the 'all' (Ⱨ) is either a positive or a negative strange Absolute (+sA or −sA), I deal with the emergence of these two sides of the 'all' there in the next section. But because on the other hand in the comparison to 'nothing' the term 'all' is common, I use it in this sense ('all or nothing'), too.

All/ Everything abbreviations: ∀, All² (or only All).
(On the Emergence of nothingness see later.)

Emergence of the Strange Absolute (sA)

"The Egyptians created Gods out of the things they were scared of, and out of the things they wished for." Egyptian tour guide.

Strange Absolutes (sA) are being developed if Relatives are taken as absolute.²⁴

Everything that is relative can be absolutized.
That applies to things, people and especially experiences in childhood. Those experiences may seem to be positive in the sense of temptations, negative in the sense of traumatizations, or the third main-group, which is a negation of the child or its existential needs. Then, those people were not able to build basic trust as a child. Something else happened instead: Trust in something, that is really only of relative worth, too much mistrust towards a relative negative, or no trust at all. At a certain point, it does not matter anymore if something is misabsolutized positively or negatively. They are two sides of the same medal, as contrary as they might appear.

Here the French saying "Les extrêmes se touchent." - "The opposites are touching each other."

In the western society as an achievement-orientated society, deeds and successes (asp. 15) are probably absolutized the most. Also, sexuality (asp. 6), ownership (asp. 9), other people as role models (asp. 3) and some other aspects are playing a big role in our society. The church is probably most endangered to absolutize morality or itself as an institution (asp. 12 and 3). The rationalism absolutizes mind (asp. 16) and the romantic absolutizes emotions (asp. 7) etc.

It is also about certain, nameless attitudes, that are dominant and internalized in families.

²⁴ Similar to Freud's concept of fixation.
Internalized I will call them strange Selves. Many absolutizations or “craziness” in society or families are viewed as the right conducts of life and are therefore being encouraged. They are an important cause of mental disorders.

I agree with M. Siirala, who talks about direct relations between schizophrenia of the individual and `schizophrenia´ of the generality. I will also try to show here connections between the different familiar and social ideologies and their inversions on the one side, and the different illnesses of the individual on the other side.

Types of the sA: +sA (= pro-sA), –sA (= contra-sA); asA and rsA. With nothingness, they are parts of a triad.

Symbol of sA: ☯ Yin-Yang.

**Positive strange Absolute** (+sA/pro-sA)

Synonyms: False Gods, ideals, love-objects, 'drugs', glorified objects, wrong centering, etc.

As strange Absolutes they represent above all: strange or substitute sense, strange or substitute identity, -truth, -reality, -unity, -safety, -reason, -autonomy and -freedom.

Compared to the +A, the +sA appear more fascinating, more direct, more provable, more touchable.

**Emergence**

Something Relative is viewed as absolutely positive/right, without being it.

Typical examples for +sA are: Money, power, health, youth, sex, achievement, performance, the relative good and right, morality, fidelity, knowledge, wisdom, control, the human itself, especially idealized people, the own person, “saints” or other earthly matters.²⁵

![Diagram of absolutes and their inversions](image)

The graphic illustrates, how a part of the absolute-area is being conquered by a relative positive. Therefore that absolutized area adapts to the characteristics of the strange positive Absolute.

The affected defines him-/herself now by the absolutized ideal and therefore gives up his/her own first-rate definition and identity! Because the established ideals and their increased requirements cannot be fulfilled in the long run, therefore, they start to promote their opposites. (See I. Kant: basic virtue is a good will. If that is missing, the other virtues may also become evil and dangerous.)²⁶

The +sA becomes the most important in two different ways: it becomes the best (subjective) and the most expensive (objective). The +sA does not only imitate the +A but exceeds it in its positive effects. Therefore, it is very tempting. However, these hyper-positive effects are connected to bigger disadvantages that appear later.

---

²⁵ The positive misabsolutization is always a partial denial of the actual reality because its negative parts are omitted!

**Negative strange Absolute** (−sA /contra-sA)

Synonyms: false friends, false objects of hate, false deadly sins, false demonization.

**Emergence:** Relatives, that are taken absolutely negative as absolutely bad/evil.

Typical examples: immorality, fault, illness, weakness, inferiority, impotence, failure, sorrow, death, conflicts, problems, aggression, the evil, loneliness, traumas, certain people.

−sA are also often recognizable when using “I definitely cannot...”.

For example: "I cannot be angry!"，“I definitely cannot become like my dad!”.

The graphic illustrates how a relative negative breaks into the absolute-area (o how a lack in the absolute-area is being replaced by the relative negative). With that absolutization, it gains the characteristics of a strange negative Absolute.

+Absolutizing of Relative Negative and − Absolutizing of Relative Positive

Whenever a positive Relative is absolutized positively, the impacts will be much lower, than if a positive Relative is absolutized negatively or a negative Relative is absolutized positively.

(Also see: Ambivalent, paradoxical behavior, Inverted, paradoxical world.)

+sA and −sA: Greatest Enemies and Best Friends

+sA and −sA depend on each other and exclude each other at the same time. They fight each other or promote each other. ("Evil never thrives better than when an ideal precedes it." Karl Kraus). They are opposites and nevertheless the same. Like a reflection in a mirror, where the opposites are however the same. The devil is then only a co-player of the false God in the same game. The phrases “Les extrêmes se touchent” (The opposites are touching”) or: “The extremes are equal”, “Extremes are often together”, “The extraordinary is equal” and so on, express the same statement.

Every It carries potentially its own enemy and its nothing in itself, and is so doomed to fail in the long run.

**Life and Death as sA**

For most people, earthly life is probably the most important positive and therefore the death the worst sA. One could understand all other sA as their precursors / predecessors or their consequences. It would be very necessary to characterize these as death² and life², since it is not the actual death and the actual life but the absolutizing of earthly forms of existence.

Both condition each other: the greater our greed for life, the greater our fear of death. And the greater our fear of death, the greater our greed for life.

---

27 I.e.every evil except the −A.
But also from a certain point, you find the opposite (→ Reverse into the opposite): the greater our fear of death, the sooner we want to die. And the more we live greedily, the less fear we have before death because we then repress it. (All possibilities can also coexist at the same time.)

This possibility that death and life can mutually reinforce, although they are completely opposite, is a characteristic of their second-rate reality. For me, this possibility is also a sign that this is not the last issue. Only complete death (after Rev. 20: 6, the "second death") and eternal life are completely incompatible and mutually exclusive.

Absolutistic sA (asA) and Relativistic sA (rsA)

The following graphic illustrates the creation of asA and rsA detailed.

This graphic illustrates the emergence of asA and rsA.

The Absolute without the Relative becomes absolutistic A without R \[\rightarrow\] asA is absolutistic, hyper-absolute
and many or all absolutized Relatives become all / many R* \[\rightarrow\] rsA is relativistic, hyper-relative

There is a contrary opposition between asA and rsA.

- asA = the absolutistic sA is a strange Absolute, that is without or totally separated from any Relative.
  (In contrast to that, the actual A 'surrounds' the Relative). The asA are superelevated, distant conceptions of God, or idealized humans (idols, rulers), that have no connection to reality.
- rsA = relativistic sA = the totalized Relative. That refers to the point of view of relativism, that everything is only relative and that there is no absolute truth. That means that we are not dealing with a single (or a few) strange Absolutes (as with pro- and contra-sA) but we are facing a variety of Relatives, that determine WPI.

Examples for rsA:
- The every-day life (or whatever is relevant at this situation) dominates P.
- The present media world with its excessive distractions.
- The digital era if it creates a digital world without a superior Absolute.

Hints:
1. Although the asA and rsA are special absolutizations, they are principally not different from the other sA, so that I subsume them there.
2. The asA and rsA are described and differentiated more detailed in the unabridged German version.

Strange `Absolute Attitude´

In itself, the `absolute attitude´ is absolutely free in the choice of + A or –A. However, if relative choices are absolutized, strange 'choice absolutes' are created.
(See also `Absolute attitude´ of the I.)
Emergence of the Nothingness

Synonyms: Zero, nothing, vacuum, emptiness, deficiency.
Shortcuts: s0, 0² or mostly 0.
I have already mentioned, that parallel to the absolutization of a Relative, there will be a negation of actual A., As a result, a defect in the absolute-sphere, an empty space, a nothingness emerges. That nothingness itself is not actual but a second-rate (²), a pseudo-nothingness but something that will be experienced as total nothingness. It has three sides: a positive, a negative, and an own, empty side, that will be discussed below.
With the choice of the nothingness, a person also chooses the opposite strange All or sA. Therefore, negation creates contradicting opposites. Negation means: A is negated, ignored, superfluous, deselected, not considered, repressed, excluded etc.
Personally, that usually means the negation/ devaluation of a person´s actual Self.

What are the Absolutes, that are negated?
= the three actual A: +A , −A and the personal ´absolute attitude´.
• Negation of +A:
What is +A? Believable assurances to a person, such as formulated by religion, human rights, or love.
(Here categorized by the 7 aspects of dimension).
  1 – The unconditional love of God, i.e. every person is loved by God for its own sake.
  2 – The unconditional personal identity, the Self.
  3 – The uniqueness of a person.
  4 – The integrity of a person.
  5 – The unconditional right to exist of a person.
  6 – The unconditional dignity of a person.
  7 – The right to self-determination of a person.

The person leaves his/her inner paradise an inverts him-/herself if he rejects such absolute assurances.
One could also say: Inversion also happens, when a person does not believe to be unique, unconditionally loveable, equal, free, etc.
• Negation of −A
Attention to the negation of the −A¹ is also important because by its negation another negative, which in itself is only relative, takes its place and gains absolute significance for us.

---

28 Example Mephisto to Faust: Nothing you will see in eternally empty distance, not hear the step you are doing, find nothing solid where you rest. Faust: In your Nothingness, I hope, the All I will recover. (Goethes Faust Part 2, Act 1)
29 The vulnerability-stress model (which for the purposes of this paper describes the impact of adverse sA) must complement the one hand by an availability-seduction model (the impact of positive sA group) and on the other by a quasi negationability-negation-model (which indicates the impact of s0).
30 Absolute promises are not: health, material possessions, success, etc.
That means, that something that only worries us in a relative way and only appears to be a relative problem, becomes now unbearable and seems to be insoluble. Now, the person is scared of something, that is only relative fearsome at all.

• Negation of the ‘absolute attitude’:  
  As said: In itself, the ‘absolute attitude’ is absolutely free in the choice of + A or –A. Ideologies, however, either negate this choice ("man has no free will") or overexpand it ("man is completely free").

**Examples of the Emergence of the three It-parts**

• Example: + / −/ 0

Concerning the quality, every Relative is only more or less positive, negative or neutral. In the case of an absolutization that changes: the fluent transitions of more or less positive and negative (good and bad) are polarized and totally disconnected. Now, certain things or people are categorized as ‘absolutely good’, ‘absolutely evil’, ‘black or white’ or similar, although they are not. The affected experiences specific relative things in an absolutely good or bad (...) way or that was taught to him/her that way in the past. Because of that, he/she now only sees the world/ the things that (extreme) way. Like looking at it with a magnifying glass, everything seems to be bigger/ more extreme than it actually is. There is nothing (0) between these opposites.

It is important to say, that this person often has certain advantages first and mainly disadvantages later on.

The graphic shows how something Relative changes after an inversion. It is polarized, compressed and finally divided into +sA, −sA and 0. The original unit is basically torn into the different, opposite parts. On the other hand, those parts are connected with each other very closely. (Symbol on the right)
• Example: strength/ weakness

This illustration shows how an inversion creates by absolutizing of Relatives certain It-parts: a pro-sA out of strength, a contra-sA out of weakness and a nothingness (0) out of others (and out of through the absolutization negated Relatives itself). The following differentiation can be made then: A first part, that I will call pro-sA , here strength*, a contrary opposite part, which is the contra-sA, here weakness* and a contradictory opposite part, the zero-part (s0), the nothingness*.31

I want to explain the origin of the three It-parts by means of this example: (partly repetition). Two Relatives, here 'strength' and 'weakness' are relative opposites. We can see, that both terms (or their meaning) are not separated sharply of each other but into each other go over. The curve of the 'strength' reaches in the area of the 'weakness' and vice versa. That means both terms are not representing anything absolute. Neither the strength is absolute, otherwise, it would be almighty, nor the weakness is absolute, otherwise, it would be impotent. Instead, strength contains some of the weakness and weakness contains some of the strength. Strength and weakness, therefore, create a polar couple. They are on opposite sides but do not exclude each other. They are part of something bigger, something whole (+A). They are part of that bigger unit, without being identical. Besides them, there is something other with that they are also connected. It is not called strength nor weakness but they are also a part of it, without losing its own identity. Strength and weakness have a relative relation to this other, just like they have a relative relation with themselves. How is that situation changed due to an inversion?

Strength is not understood as relative but as absolute, as almighty. Weakness is seen as powerlessness that has to be avoided (‒sA contrary to +sA). That also means that this absolutized strength (strength*) excludes weakness or anything similar - such as other

31 The * should make the absolutization clear again.
absolutized parts exclude their opposites. With that, the opponents are not only relative opposites but absolute opposites now. There is now a contrary and a contradictory opposite for every part. However, they also depend on each other and are strongly connected to each other, too.

The Emergence of the Three Sides of any It-part

So far, we established how inversion can create three parts (‘triad’).
Now the hypothesis is, that each of these three parts also has three sides.
How can these originate? Explaining the emergence of the three parts of the It, we assumed that every Relative in \(W^1\) has a relative opposite, which is also absolutized if an absolutization takes place. (Besides that, a nothingness is created).
Parallel in addition, I assume that in \(W^1\) not only every Relative faces to another Relative but that every Relative also has his relative opposite (and other) in itself.
Put in other words: One Relative contains above all what the term calls, besides, however, also its relative opposites. I.e. one can recognize by a Relative in \(W^1\), on the one hand, one side (the main side), which the term calls, besides, however, also two ‘sub-sides’: one, that represents its relative opposite and one that represents others. Now in the case of the absolutization not only the main side become absolutized but also the sub-sides. Every part, Pro-sA, the Contra-sA and 0 get thereby beside his main side two absolutized reverse sides (which are mostly suppressed).
Example: strength/weakness

Using the example of the absolutization of strength and weakness, this illustration shows how the three sides of each It-part are formed. Since strength usually also ‘contains’ some weakness, the inversion causes that side to be absolutized as well and represents a negative side of the pro-sA ‘strength’. Finally, strength does contain not only some weakness but also something else (others), which becomes 0-side of the pro-sA. The same applies to the two other parts, contra-sA and 0. The * should emphasize again that these are absolutizations.
Examples of Different sA with their 3 Sides:

• The 3 sides of the + *
  1. The main side of the + *: e.g., correct decisions / successes / strength ... are great.
  2. The negative side of the + *: e.g., the agony of choice, the pressure to succeed or to be strong.
     Or Goethe: "Nothing is more difficult to bear than a number of good days."
     Also: the more + * the higher the drop height.
  3. The 0-side of the + *: e.g., the + I do not care, resignation, etc.

• The 3 sides of the – *
  1. The main side of the – *: e.g., poverty, war, murder, immorality, illness ... are bad.
  2. The positive side of the – *: e.g., morbid gain, ↓"fall height", emergency lie, sweet sin, tyrant murder.
  3. The 0-side of the – *: e.g., the – I do not care, repression.

• The 3 sides of the Nothing²
  1. The main page of nothingness: e.g., strange emptiness, nothing.
  2. The positive side of nothingness: e.g., Nirvana, belle indifference, the advantage of repression.
     If I have nothing, I cannot lose anything. 32
     It is easier to dispense completely with everything than half.
  3. The negative side of nothingness: e.g.,
     horror vacui, one is burned out, desolate, abandoned, lost, left alone, godforsaken.
     The nothing stares at a desolate one from empty eyes (caves).

The contradictory main and reverse sides correspond to paradoxes (→ Emergence of paradoxes).

Summary: It as a nine-sided Triad

It is about the It as a triad, as a 9-sided It.
The It as a triad shows three parts: Pro, contra and 0, as well as 9 sides: 3 times +, 3 times – and 3 times 0.
Considering the sides, that also means: Each side can be based on one of the three parts.
For example: If P² is contented, than that well-being can be based on a pro-, contra-, or 0-part - such e.g., I feel content because I was morally (+ of pro-part), or immorality was tempting (+ of contra-part) or I am contented, when living beyond morality and immorality (+ of 0-part).
This also means that every event (such as a symptom) can be interpreted differently in four ways:
It is a first-rate event or it can be assigned as a second-rate event to the pro- or contra- part or 0-part of an It.

32 R. M. Rilke: “And we, animals of the soul, confused by everything in us, not yet ready for nothing; we grazing souls: do we not implore the Allotter by night to grant us the not-face which belongs with our darkness?” Das Karussell, Reclam, p24.
As said before, the It is like a chameleon: it can appear and act one-sided, two-sided or three-sided, depending on which of the sides or parts are activated. In comparison to +A¹ and –A¹, that are not divided and have no backsides, the Its present themselves as centers of second-rate realities, divided into two sides (all-or-nothing)³³ or three sides (pro-, contra- and zero-part) which also have backsides. Therefore, the characteristics and dynamics in W² are very different from W¹.

The Different Valences of the It

- Considering the orientation of valences, the following differentiation can be made:
  1. The opposites („hostilities“)
     a) contrary opposites
     b) contradictory opposites
  2. The `pacts´ / fusions
  3. The `nothings´ (nothingnesses)

- Considering the localization of the valences:
  1. Inner powers / valences inside the It.
  2. Power / valences of the It to the outside.

There are similarities to the theories of valence in language.³⁴
(See also `Overview of all It-valences´ below).

It-parts as Opposites, Fusions and Negations

I distinguish:

- An absolute opposite: between +A and –A.
- Relative 'opposites' (= polarities) between different Relatives.
- Strange absolute opposites (that’s what it’s all about here):
  contrary opposites between Pro/+sA and Contra/‒sA,
  contradictory opposites between All and nothing resp. ±sA and nothing.

[Hints: I use Pro and + as well as Contra and – synonymously; * indicates the absolutization. For Pro/+ you can use: idol, ideal*, love*, luck*, etc. For Contra/‒sA you can use: `devil', taboo*, hate*, etc., Yin-Yang ♦ is a symbol of the It opposites in balance.]

In parallel, one can distinguish: An absolute connection between the + A / God and the person with a + absolute attitude. Further: relative and strange absolute connections as fetters → fusions.

I mentioned: If a Relative is absolutized, its opposite is absolutized as well. I.e. with the

³³ Strictly speaking, the ‘all’ is also divided in pro and contra - but appears as a counterpart of nothing first in one piece.
³⁴ See if necessary in the unabridged German version.
strange `All` we also choose the strange `nothingness` . With the strange positive Absolute (resp. pro-sA) we also choose the strange negative Absolute (resp. pro-sA) and vice versa; and the strange 'nothingness' with them. Thus every uncorrected inversion creates a dyad (all-or-nothing) or a triad (Pro-sA, Contra-sA and 0). In other words: a false God gives birth to a devil and vice versa, an ideal* creates a taboo* and vice versa, love* creates hatred* and ever nothingness too, etc.

The It is defined by the fact, that the mentioned parts are contradicting and too similar at the same time. The parts are facing each other like a reflection in a mirror. They are like contrary twins (dyad) or triplets (triad). 35

An It-part excludes the others but at the same time, it includes/ binds or negates them. That’s why one finds, that opposites attract, or fight or negate each other. And the same with fusions and negations. One can also say that opposites are never only contrary but also the same. Similarly, pacts also contain opposites and both negations (0). Second-rate realities and personal parts are at the same time too contrary (contradictory) as too equal and too null.

In everyday language opposites are known in the form of the expressions “black or white” or “friend or enemy”.

The mentioned statement that the extremes are touching themselves (“Les extrêmes se touchent”) marks also the situation very well, they are extremely apart from each other as well as they are chained at the same time. A picture and its reflection also represent the double-character of such pro- and contra-forms. One may say: Nothing is as similar and as dissimilar at the same time as its reflection.

Depending on the situation, any of the three It-parts can be dominant. That means that the It can be very different, contradicting and crazy but also uniform and neutral. It seems to be the same at first, then the opposite to finally disappear in the nothingness.

Opposing It (fig. left) or It with similar Co-forms (fig. right) may
a) combat or
b) make pacts / reinforce / merge with
c) neutralize, dissolve each other or
- depending on which of their sides are "activated"!

35 Similarly ‘Oxymora’ as a rhetorical device.
This illustration presents how two (or more) Its interact with each other, using their different sides comparable with gear-wheels. The Pro-sA-part of the It is illustrated without a pattern, the Contra-part is gray and the zero-part is illustrated with dots.

They agree in the fight against W¹. As soon as another enemy is in sight, they create a pact. As soon as the enemy is defeated, they ruin their own fellow campaigners. That already shows the fundamental characteristics of disorders in society and also within an individual.

Main links regarding opposites in this publication:
- Complex personal dynamics and relationship-disorders
- About the emergence of paradoxes
- Ambivalent, paradoxical behavior
- The opposites in the realities
- +sA and –sA: greatest enemies and best friends
- Reversal into the opposite
- Inverted, paradoxical world
- Anticathexis (in ‘remedies of defense’)
- Opposites in Schizophrenia and their Dynamics
- Solution (of the opposites)

I cannot go into more detail here about dialectics as the philosophical doctrine of opposites. There is an extensive literature. As far as I know these, the discussions are almost only about the dynamics of pseudo-absolute opposites (in the sense of sA).

Analogies in physics and cybernetics
- Physics: - "For every action, there is an equal and opposite reaction." (Newton: 3rd mechanical law). Regarding the dynamics of opposites: see parts of the atom.
  - One could also interpret nuclear fission, nuclear fusion and radioactivity (decay) as special dynamics of second-rate realities.
- Color generates a complementary color.
- The pursuit of balance, KW self-regulation, and feedback. (For details see unabridged version).

The Opposites in the Realities
In W¹ there is only one absolute opposite: The opposite between +A and –A. All the other opposites in W¹ are only relative. Therefore, it makes sense, to talk only about differences or polarities when it comes to those spheres. There are R¹ that are polar opposites of another R¹ and are therefore representing relative opposites. Both of them create certain opposites-pairs or antipole-pairs, that could also be named “dipoles”, or “tripoles”. In W¹, the relative
single parts are permeated and embraced by +A. They show fluent passages and no harsh limits. Here is variety and no homogeneity. You could also say: Since no R¹ is absolutely limited from another one, they are all connected to each other (through the +A). Every part contains some of the other parts as well. Humans, however, have to put the different parts into words to communicate with each other. Those words are separate from each other. They indicate the specific irrelevant pole of the meaning of something, without mentioning all the other meanings along with it.

Whenever we describe an opposite or difference in our every-day language, it usually does not indicate whether it is a relative or an absolute opposite - unless it is specifically expressed. However, for the understanding of our topic, that difference (relative, absolute or pseudo-absolute) is of great importance.

In the second-rate realities, especially in their centers, the Its, those differences are not perceived as relative but as absolute - but in reality, they are pseudo-absolute. With that, the named opposites do not only represent opposites in general but also paradoxes, splittings and contradictions.

(More see in ‘The personal It’ or in detail in the unabridged German version.)
Overview of all It-valences

**Pacts** arise by the same parts / sides with the same connotations and by the opposites with contrary connotations. Shown by continuous lines → parts / sides are / are equal.

**Opposites/ contradictions** enmities arise by equals with contrary connotations, and by opposites with the same connotations. Shown by dashed lines → Parts / sides are / are contrary.

**Neutralizations, annulments** arise by the same ones, in which the 0-page is activated at the same time, and by contradictory ones with activated 0-pages. Shown by dotted lines → parts / pages neutralized.36

The graphic also helps to understand the main paradoxes. Originally in W¹, i.e. non-absolutized, those phenomena do not create pacts (equals), enmities (opposites) or neutrals. They only became such because of inversion.

---

36 The connection between 'Co-pro' and 'pro' symbolizes a pact between a pro-form and a co-form ('co' = together with).
Which Its Correspond to Which Ideologies?

Trial to allocate ideologies in the sense of this publication.

Hypothesis: The dynamics and interactions between the Its and the ideologies are the same. 37

Like the Its all ideologies would have both: misabsolutization and negation. An ideology, or sA, cannot integrate its opposite ideology but must fight it, although at the same time it owes its existence to its opposite.

And one can conclude that all ideologies are potentially pathogenic - and even more so the more unlike they are to the positive Absolute (+A), or in other words, the less love they impart.

---

37 Note: As I have mentioned, I mean with 'ideology' not only the well-known political ideologies but also ideologized familial and individual attitudes.
The personal It and the strange Self

“If there is a dark power, that is evil and treacherous enough, to insert a thread in our inside and to pull it tight and to drag us down dangerous and mischievous ways..., then it has to adjust itself to us and has to become like we are; only that way we believe in it and make the room for it that it desires to fulfill its mysterious work.”

Explanation of Key Terms:

$sS = \text{strange Self = strange personal Absolute}$. Qualitatively further distinguished in:

$+sS = \text{the positive strange Self. Here equated with } \text{pro-}sS$.  
$-sS = \text{the negative strange Self. Here equated with } \text{contra-}sS$.  

[as $sS = \text{absolutistic } sS$ (also hyper-Self) and $rS = \text{relativistic } sS$ are not dealt with further in this abstract.]

$p^{\forall} = p\text{All} = \text{personal absolutized All}$. [Quantitative description of a strange Self. Mostly used in the contrast to the non-Self, $p0 = \text{personal nothingness}$.]

$p\text{It} = \text{personal It}$: complex, that controls that person (P) and that contains two (all and nothing) or three (pro-, contra-$sS$ and 0) parts as a dyad or triad.

Hints: Where the difference between `p It 'and `sS' does not matter, I use both terms synonymously.

Since this chapter is only about personal topics, I omit often the abbreviation `p' for the sake of simplicity.

Synonyms and Characteristic Terms for $p\text{It}$

- Strange-, pseudo-, spare-, help-, emergency-, substitute-, compensation-, false-, divided center/ -Self of a person.
- 'homunculus', demon, parasite, devil, false friend, inner tyrant. Also: It as the dominant unconscious.

Introduction and Overview

Everything that was described concerning the Emergence of the It, in general, also applies to the personal It.  

Analogical to the general It-description one can say: Due to an inversion, something Relative will be taken as absolute and the actual personal Absolute, the Self, is being negated. The absolutized Relative may be of the person himself, or he may have an external origin. In both cases, something new, strange and personal is created with its own characteristics and dynamics. I.e. a strange, second-rate Absolute, the strange Self, is created in the personal absolute-sphere after a misabsolutization. With this misabsolutization, the person also negates a part of his/her Self, so that there is not only a strange Self in the center of the person but also a “non-Self”. Those new, strange, central powers within the person are

---

38 Since I assume that some readers only read the one or the other section, I have repeated here the most important.
called the personal It in this publication. The personal It embodies a new and strange, controlling power, that exists along with the original first-rate power. Initially, P has had dominance but loses its power continuously and becomes the loser in this situation.

A very important fact is, that the individual is convinced that the strange Self and not the actual Self is the right one. P is convinced to get major advantages from the choice of the strange Self. That fact is also a reason for holding on to the illness and therefore refusing to become healthy again. (Also see later: Freud's morbid gain and Resistance).

The new strange personal feature appears like a kind of strange person within us. Of course, no real new person is being created but features, that imitate the actual person, take a certain spot within a person or are taken instead of the actual person. Later on, we will discuss how the new strange personal parts can “talk” to us in the shape of acoustic hallucinations, or do many other things with us.

The comparison with a homunculus as some kind of false person, within us, is apparent and is used as a model for the described personal It in the following sections. Firstly, it is important to remember, that strange Self and non-Self, like a kind of homunculus within a person, are both dimensioned and differentiated in a characteristic way, which affects P in its psychical center. That becomes apparent in what I will call the Subject-object-reversal. That means, that wherever the sS/resp. It is in control, the person loses its subject-role, and now becomes the It as subject and which determines the person as its object. With that, the person does not live first-rate anymore but second-rate, only functioning through the certain It. The second major result is a personalization of the It and a reification of the person. Things are seen as something personal and a part of the person becomes a kind of thing.

Looking at the dynamics (verbs or predicates), the focus of the beginning of the emergence of p It is: The It becomes independent, changes and lives by itself. That process affects all of the seven aspects of dimension and the connected differentiations of the It.

Mutation and Adaption of the It to the Person, and vice versa

Depending on where the p It is established, two main changes can be discovered:
1. The It changes P in its sense, according to its pattern resp. the person adapts to the It. But also:
2. The It adapts to the person. It becomes more like the person, such as a parasite that is adapted to the host organism.

Brief Overview of Origins and Structure of the Personal It and the Second-rate Personal (P²)

1st step (inversion) was: P inverts R and A (that was discussed on top).
2nd step (realization): the absolutized R (R*) becomes sS = strange Self and the actual Self becomes non-Self. Both are building the core of p It.
3rd step: simultaneous differentiation BLQC (Being, Life, Qualities, Connections become strange).

4th step: The p It subjects further Relatives and forms new strange personal (P²).
That is, an absolutized something with originally relative dimensions and differentiations changes into a new strange personal "unity" (P²) with new strange dimensions, differentiations, and connections, and the actual Self and personal are lost at this sphere. (The emergence of the p It can also be found in the `Summary table`, column G.)

This graphic illustrates the development of the personal It (left to right). On the very left, there is a person with a healthy self- and relative-sphere. Rightwards, the inversion of a Relative and the Self is symbolized. After that, the creation of an It-center (as Yin-Yang symbol) is being illustrated, which finally creates its own relative-sphere, as shown in the picture on the very right. You can also see, that the p It controls a part of P but the other part of P still contains the actual Self and has a first-rate relative-sphere, too.

**Structure of the Personal It**

Parallel to the structure of the general It, this is about the structure of the personal It. Every p It, such as every other p unit, has three main dimensions: personal strange Absolute resp. strange Self, its relative sphere and nothingness and four main differentiations: strange personal BLQC.

**Appearances of the Personal It**

The personal It is per se a 'triad' and built of three parts (pro +, contra – and 0). However, it may appear different:
- as monad (with only one direction of action)
- as dyad (like binary split)
- as triad

The emergence of the personal It as a nine-sided triad happens analogously to the generally described creation of the nine-sided triad and is therefore not described again (See here).
Symbols
• Personal It as a nine-sided triad:

These symbols represent the personal It as a nine-sided triad. Both graphics also illustrate how a person\(^2\) is caught within the triad.

• Yin-Yang ☯ is a symbol of the It opposites in balance.

Comparison to Similar Terms
• Freud’s ‘Id’ (see general part).
• Self- and object-representations:
I think:
- Everything relative may be a self- or object-representation (interior or exterior).
- The Its are special representations because they are dominating. Here, they are described also with the terms of their parts: strange Self and non-Self.

Main Characteristics of the Personal It
The personal It (p It) has the same main characteristics as the It in general. I want to address only briefly how they concern the person.
The p It has strange characteristics, especially those of a strange Absolute and of a strange nothing.
It bonds its own Relatives, differentiates itself and therefore creates its own, independent and personal unit.
It controls the specific spheres of a person. It tries to expand or it conquers other Its.
It builds complexes and second-rate, personal systems. Altogether, they form a second-rate, personal reality.
It is no longer freely available for P\(^2\) but able to be voted out by P\(^1\), however, it still does not disappear right away.
The further p It moves away from +A, the more do mechanical and physical rules apply instead of the rules of life or of the living spirit since the It is more materialized than the spirit.\(^{39}\)

\(^{39}\) Parallel to this, a chaotization, takes place.
How Can You Recognize the Personal It?

Terms such as “always”, “never”, “absolute”, “definitely”, “no way” “for sure” and so on, indicate an absolutization. Common phrases are: “I hate you”, “I love that more than life”, “You are my all” or similar.

Also very typical: “I have absolutely to do that.”

Everyday It and Lifelong It

Such as described in the section of the general Its, the p Its may be very fugitive but also may stay for an entire life. A thought, that only lasts and dominates for a short time would be equivalent to a fugitive It. A traumatizing experience in early childhood is an example for a lifelong It.

“Choice” of the p It

The decision of which strange Absolutes (sA) resp. Its is going to be established, often depends on the initial conditions. If a child lives in a disturbed family, it will probably adapt to the sA of the parents (mainly unknowingly). Or the child tries to compensate these disadvantages with the opposites: if the child is overwhelmed with arguments and aggression, it will probably absolutize harmony and peacefulness as a reactive response, to protect itself. Or, if disorientation, confusion and follies dominate a family's life, a possible defense mechanism would be protecting itself by focusing on prudence and regulation. With that said, misabsolutizations are often results of unconscious defense mechanisms of childhood, that appear to be a relief of unbearable situations. To put in other words: Many times, misabsolutizations are the results of our inner protection, which eventually becomes more of prison or too costly.

(See also: Mental disorders from biographical perspective).

As adults, we adapt at such Absolutes (partly passive, partly active) usually because of short-term advantage. More about the Different forces/ valences and connections in the personal It, see the corresponding remarks in the general chapter.
Dimensions of the Personal It

The Strange Self (the Strange Personal Absolute)

Terms

I repeat: The strange Self (sS) corresponds to the strange Absolute within a person. I call it the strange Self to differentiate it from the general strange Absolute and because the term 'self' is more personal and less general. The terms `strange Self' and `personal It´ I usually use synonymous unless I distinguish differently. 40

Typical examples for the Strange Self

as +*: achievements, idols, the ego, health, knowledge, status;
as –*: traumas, failure, impotence, illness, death;
But all Relatives are also possible as sS.

“False Self” and Other Terms

“Thanks to Winnicott, we know about the concept of the true and the false self, whereby the false self adjusts to the needs of an insufficient environment and the true self stays concealed and split off.” 41

Janov uses the term 'unreal self´ and R.D. Laing uses the term 'divided self´.

Any of the terms mentioned above describes only a certain aspect of the strange Self but does not include all aspects at once, which would hard to do. The term 'strange Self' emphasizes the alienation of the person, 'spare-self' emphasizes the replaceability, 'conditional self' emphasizes that I only feel myself if I fulfill certain conditions, and so on. Taking all the different psychical aspects into consideration, different terms might be found that are also good suitable. To me, the term 'strange Self' seems to be best. The term 'false self' appears one-sided negative because the sS also contains positive sides and no human is free of it and the term "divided self" does not call the possibility of fusions.

40 The equality of the strange Self and the personal It is all the more justified if one also regards the non-Self as a kind of strange Self.

Such as the actual Self, the strange Self contains a core, the core-strange-Self, and connected, second-rate, strange Relatives, that are BLQC differentiated.

Whenever I speak of the strange Self, I am referring to the entire strange Self (and not only the core), unless I specify it differently.

### Emergence of the Strange Self

**Because of the importance: partial repetition.**

How is the emergence of the strange Self (sS)?

It is originated after the same principles than a general It/sA: After an absolutization of R, or a negation of $A^1$, which where not corrected, a new and strange (ns) center is being established and differentiated within a person, a strange Self, which is experienced as the actual Self. With that, some kind of a dominant strange object is developed within us. Unlike other internalizations or introjections, that ‘personal strange object’ takes over the role of the Self including all its characteristics. Thus, a new personal reality is created, which will determine us. That is different than characteristics or personality traits that are created within us if those are only of relative importance.

Later on, we will see how the strange Self negates the actual Self. The strange Self behaves like the actual Self resp. personal Absolute and tries to adjust its features. Therefore, the affected person experiences it with those absolute features and accepts it as his/her own Absolute. Although the sS is not able to ever fully replace the actual Self, it achieves a partial success: It partly represents the Self and becomes very similar to it. That causes a typical situation for mental disorders to occur: The strange Self is being experienced as the own Self and the own Self is being experienced as strange (or as nothing). That’s why the affected person has feelings of alienation most of the time. If the identification with a strange Self is
far progressed, the identity feeling can properly turn round itself: Then the person can have subjectively a good identity sensation, although he/she is objectively very alienated - and he/she can feel vice versa strong alienation, although he/she is objectively self-determined.

Examples: Obligation and Possession as Strange Selves (sS)

The graphic illustrates the emergence of two strange Selves* (dotted lines) with two new Egos (= strange-Is), besides the first-rate I in the middle, which is based on an actual Self.

1. Left: A Relative (here obligation, aspect 12) is being absolutized and invades into the self-area. A strange Sel created in the self-area, from which an Ego is now operating. That causes a partial self-loss and a division of the self-area and the Ego.

2. Right: Another illustration of the emergence of a strange Self and Ego: The I leaves the center and establish itself in the relative edge area (here possession, aspect 9). Possession is becoming the new strange center, from which the Ego is now operating.

I want to explain the resulting situation more detailed by using the graphic from above. Let us assume that a person views the performance of his/her obligations as absolute (aspect 12). The performance of obligations is then superior to the Self. The self (confidence, esteem, determination) is now mainly made conditional on the performance of obligations. As long as the performance of obligations is subordinated to the I, the I-self dominated, remained the boss in his own house and could handle adequately from this position with an offense against obligation, i.e. relaxed and free enough. Then I-self "knows" that my Self is the more important, first-rate, more valuable etc. and that the fulfillment of obligations in contrast to it has a relative meaning. However, if the performance of obligations became a strange Self, it now claims the same characteristics as the ones that are only supposed to be owned by the actual Self. But now the Ego cannot simply with willpower get rid of the strange Self because it is materialized and personalized in the meantime.

The terms `strange Self´ and 'It' describes very well, that something strange has been created, that takes its effect by itself and that determines me (e.g., It tears me apart, It depresses me, and so on). With that, they already show the main characteristics of mental disorders. The strange Self owns entelechy and its own dynamics in that position. New, strange dynamics and rules also determine the person in his/her center. They appear to be personal and some sort of self-propelling. As mentioned before, in the beginning, the person has some short-term, subjective advantages by installing a strange Self, although later on, the disadvantages will increase. All inverted parts of a person are as if they are put into new roles. However, the original, actual Self will always exist along, although it is weakened. With the inversion to a strange Self, the absolutized Relative is subjectively more absolute, more unconditional, more primarily (too important), more independent, more lively, more personal, more real
and more similar to the Self than it was before. Fortunately, it is impossible for the SS to become exactly like the Self. Besides the strange Self, the partial negation of the actual Self also causes a non-Self to be developed, which I discuss below.

+ and – Strange-Selves
(Note: +sS and –sS are synonymous with pro-sS and contra-sS).

Such as we differentiated the strange-Absolute as +sA and –sA, we can also distinguish the strange Self as +sS and –sS. +sS and –sS of the same aspect belong together. Per se, they are two relatively contrary poles of one aspect but now separated due to an absolutization, although rigidly connected also to each other.

Absolutized opposites are depended and separated from each other at the same time. They are the opposite and the same simultaneously. Such as a reflection in a mirror is the same but yet converse. They depend on each other and exclude each other at the same time. They coincide and are different in addition. Superficially, they are enemies but when it comes to fighting a third person (object), they are accomplices.

+ Strange-Self (+sS)
Synonym: pro-Self or super-Self. Personal as false God, golden calf, crutch, corset, also fixed or false ideals/objects of love/ glorified; 'drugs' (otherwise see +sA).

– Strange Self (–sS)
Synonym: against- or contra- or anti-Self, personal as: false enemies, or objects of hate, false demonization, traumas (otherwise see –sA).

Strange-Self as Dyad with Reverse Sides

Using the Yin-Yang symbol, the illustration shows a +sS and a –sS in pro- and contra-position with its contrary reverse sides. (The non-Self and the 0-sides of +sS and –sS are not shown here).
About the meaning of the reverse sides of the sS:
We are about to discuss a very important aspect, that illustrates parallels to S. Freud's term of morbid gain. Neither the strange Absolute nor the strange Self is solely negative (such as the Relative). Although they are generally unfavorably, they also have positive sides, that are determining in individual cases, whether an sS can be emerged and stay for a long time.
More specific: By using specific strange Selves, the affected person can stabilize or restore his/her inner balance. The strange Self gives and takes. It replaces Absolutes with similar Relatives. The strange Self is neither an enemy within us, that has to be defeated nor the God, which has to be glorified.

Difference between Strange Selves and Traits or Personality Signs
The strange Self is always of absolute importance for the affected person. Character traits can be of absolute or relative importance for a certain person, while a strange Self is always of absolute importance. In the everyday language, it remains uncertain if for instance, such as the need for harmony is of relative or of absolute importance for a person. However, in psychodynamics, the difference is important. The absolute position of the trait will cause all results of a strange Self, which still closer to be discussed. This is not in the case of a trait with relative meaning in such a way. Then the effects of the trait will have only relative results. The person, for example, will not be able to be split by them. The situation is comparable with somebody, with pleasure alcohol drinks (personality trait) and another who is dependent on alcohol.

The Non-Self
Shortcuts and synonyms for the non-Self: p0², p0, not-Self, personal nothingness.

Emergence:
The emergence of the non-Self is equal to that of the general It, the all-or-nothing-principle by sacrificing the actual Self.⁴² (See if necessary `All-and-nothing emergence` in general).
The non-Self includes, regarding the dimensions above all absence or loss of sense, identity, reality, unity, safety, freedom, personal foundation, and autonomy. The non-Self includes, regarding the differentiations above all absence or loss of the first-rate personality, vitality, qualities, subject-role, and connections.
Origins: above all nihilism and materialism.

⁴² E.g. • M. Foucault: "No truth about the self is without the sacrifice of the self." p 324
• F. Nietzsche: "I love all who are like heavy drops falling one by one out of the dark cloud that lowers over man: they herald the coming of the lightning and succumb as heralds." Cit. 'Thus Spoke Zarathustra'; Ch. 5.
The 7 Aspects of the Dimension of the Personal It

(Similar to the General It. For more detail, see unabridged German version).

Differentiation of the Personal It

Differentiation of the personal It/ strange Self by

1. Structuring (here above all personalization)
2. Vitalization
3. Qualification
4. Contextualization, subjectivization

The personal It or strange Self is established in a person at the border of spirit and body - initially, in the shape of a spiritual misabsolutization, that crosses the border to the physical, which then becomes a new form of strange being and life with specific connections. In this form as a personal It, it dominates the person and becomes an essential cause for mental disorders. It personalizes itself, becomes alive, specially qualifies itself and creates new, strange connections. Therefore it becomes a new strange personal being, life, quality and subject with a new context.

This personal It corresponds in the organic sphere probably certain centers (I think not only in the brain) with particular functions that are connected again with other relevant structures functionally and organically with each other. The structures and functions have strange, in particular, all-or-nothing or pro-contra-or-nothing characteristics.

Especially to 4. The p It becomes a new strange determining subject.

The main influence on the person is: The It makes P to its object.
Here, another additional characteristic of the strange Self/ It becomes visible: The strange Self takes the position of a personal, vivid subject, whereas P or the I take the position of an object. 44

While the I-self as the subject was based on solid ground before, that unit is being disturbed: An sS becomes a new and strange basis for the I-parts and turns them into being its object, instrumentalizes and functionalizes them - a situation that is prototypical for mental disorders. It may be referred to as Subject-object-reversal because whatever is supposed to be the object is now the subject and vice versa. As further consequences in this aspect one can also name subject-object-split and fusion or identification, which will be discussed later. In contrast, there is in the first-rate reality only a sort of difference between the actual subject (God or I-self) and the objects (inner and outer reality) but there is no splitting.

43 Personal It and strange Self are named synonymously here too.
44 A strange I-self forms, figuratively speaking, a kind of new strange person or homunculus. Is it any wonder if, people hear voices or feel obsessed, for example in this situation?
A real splitting only takes place between +A and –A.
Analysis of speech/language (see unabridged German version)

**Kinds of Personal It (overview)**

Such as the It is in general, the p It also can be differentiated by:
- origin and kind
- localization
- appearance.45

**Origin and Kind**

See mainly: *The It in general*.

<table>

**About 'Libido' and 'death drive’**

“In classical Freudian psychoanalytic theory, the death drive (German: ‘Todestrieb’) is the drive towards death, self-destruction and the return to the inorganic chemistry.”46 “The death drive opposes to Eros as the tendency toward survival, propagation, sex, and other creative, life-producing drives ... Usually, there is a mixture of the death drive and Eros, such as there is always some sort of aggressive parts in a healthy intimate relationship, which helps to satisfy a person with himself. The loss of balance of the two tendencies leads to mental disorders.”47

If you focus on Freud's extended understanding of the term 'Libido', it becomes obvious, that it is very similar to the discussed positive absolutization. (However, Freud's Libido does not refer to the actual positive Absolute but more to the absolutized Relative.) In this publication, I have almost equated 'love' with the first-rate Absolute (God) but love will

45 The changes are so experienced without to be so. In fact, the strange-Self is only similar to the Self but it is experienced as if the strange-Self is the actual Self.
nevertheless, without God, become a +sA as Libido, as it is presented in certain publications but it is overstraining the human being. A similar parallel can be found between Freud's 'Destrudo' and the strange Nothing (0²) and the −sA.

Special Cases:

The Ego as Strange Self

The Ego or ego-parts are absolutized and form a strange Self, or a p It.
+ Ego* = ideal-Ego usually along with narcissism;
− Ego* = ‘anti-ideal-ego’, usually together with self-hatred;
0 Ego * = self-abandonment.
Luther: "homo incurvatus in se ipsum" ("the man bent back in himself").

The ´One´ as It

E.g. One does not do that - and so you have to make it (normativism).
The different Ideologies as personal Its, see general chapter!

By Localization

I believe that the p Its cannot be localized in a specific sphere of the brain but they are psychical complexes that have been materialized and are dominating the person. Like a web, they are spread throughout multiple spheres of the brain and the body and have specific “second-rate” impacts, that will be discussed further later on.
Where can the Its arise? In all realities.
If in a person = personal It; Otherwise, as group-It, society-It, and so on.

Appearances of the Personal It

The pers. It is in itself a 'triad' and consists of three parts (pro +, contra – and 0).
However, it can differently appear as follows:
- as a monad (with only one effective direction)
- as dyad ['duality'].
- as triad ['trinity']
Even if the p It appears as a monad or dyad, it is `really` always a triad because the hidden, latent parts have not disappeared and can be activated at any time.

_________________________

48 Examples: Directions in Humanism, Anthroposophy, The Work of Byron Katie, etc.
**Monovalent sS/p It (Monad)**

The personal It appears as a monad, one-sided, monovalent and monistic if:

1- only one part of the personal It is activated
for example the all or the nothingness, one –sS or one +sS, etc.
2- two or more parts of the It, or their sides are participating with each other and only have one effect.

Also representatives of different ideologies often act monadic. For instance, they pretend to own the one and overarching truth. Whoever is not on their side, is against them. So with that, they appear to be all and all else is nothing.

**Ambivalent sS/ p It (Dyad, Hermaphrodite)**

(Also see ‘Strange-Self as dyad’).

This is about the ambivalent personal strange Self, or It, that is playing an important part in the psychopathology. It specifically stands for divisiveness, ambivalence, contrast, contradiction and conflicts.

It partly stands for paradoxes and follies, as well.

The contradictions, divisiveness, or paradoxes may exist:

1 – In a strange Self or non-Self.
2 – Between different parts of a personal It.
3 – Between two or more sS or Its.
4 – Between an sS or It and an actual Absolute.

About the Ambivalence of the p Its:

The p Its are not only structured by the all-or-nothing-principle but the 'all', the 'totally' is - at least potentially - a divided unit, split in two (or more) connected opposites. On the opposite of this split unit (split into pro-sS and contra-sS), there is, on the other hand, the strange nothingness, so that arises like a triangle (triad) after which p It is primarily structured and in which a corresponding dynamism takes place.

As mentioned before, the choice of an absolutized ideal also includes the (unknowingly) choice of the specific opposite (an anti-ideal) and the deselection of the ideal also includes the deletion of the anti-ideal - and the other way around.

The p Its, such as the It in general, are very contradicting in their characteristics.

The ambivalence (or trivalence) of the p Its does not only explain their complicated dynamics but also explains the paradoxes and the follies, that can be found in many mental disorders.

Similar conclusions can be found in the psychoanalysis. I am thinking of the so-called mixture of drives in S. Freud’s theory, who believed that the sexual drive and the death drive are mixed regularly. Alike, Lacan, who said that the death drive can be found in every other
Those points of view are very similar to that of mine, although I believe, that the mixtures are not only about the drives but about every kind of Relatives (which includes the drives). That becomes clear when looking at absolutizations of Relatives because both poles of them fused together (according to the drive-mixture) but also stand in opposite position (which probably corresponds of Freud’s "drive-segregation").

**Analogy: Characteristics of the It and the Mental Disorders**

One can compare psychic disorders with similar characteristics as the sS resp. p Its: they are of an independent, "active" and of quasi-personal nature. I think that with mental disorders, always the Self is affected. In contrast to changes in the relative sphere, where you find only easy disturbances.

**EMERGENCE OF STRANGE, SECOND-RATE REALITIES**

"This reality is nothing for me!" (A patient)

(Optional chapter. If the reader is only interested in the Emergence of the strange, second-rate personal, see there.)

**Introduction**

This chapter is about the general effects of the Its on different realities: worlds/persons and I (WPI). The Its create second-rate realities² (WPI²). These take a part of the first-rate reality¹ (WPI¹). Therefore, they are connected with a loss of first-rate reality. Relative realities become (pseudo)first-rate and the first-rate reality becomes irrelevant (or subordinate). But first-rate reality can only temporarily be superseded by second-rate realities in spheres where the It/sA are active. Since the first-rate reality is stronger than the second-rate realities, the first-rate reality is never fully gone/lost, so that there are always first-rate and second-rate spheres of reality existing side by side. The second-rate realities are dominated by one, more, or many Its, that force their traits on them. One It generates WPI² in its whole domain, which is about all 23 aspects away with the main effect which the It itself represents. (More see later). In this chapter, the emergence of second-rate realities should be discussed generally. As said, specifics of the personal changes you find in the next chapter.

---

49 Literature in Mertens, Peters and under keyword "mixed drives".
50 For the sake of simplicity, I take 'W' alone as a collective term for WPI.
51 To offer some variety, I sometimes speak only of It and sometimes of It/sA resp It/sS if I want to emphasize the role of an It-part in a person.
Terms Regarding the Second-rate Realities/ Worlds (W²)

I often take as a synonym for second-rate realities = second-rate worlds = W². The second-rate realities include WPI² = [World, Person, I]²

I am writing first-rate reality deliberately in the singular and second-rate realities in the plural because these exist so.

Overview of the Phases

The different phases of emergence of the second-rate realities can be categorized as follows:

1st phase: Inversion and emergence of the It as described.

Now: 2nd phase: It produces WPI².

Overview of all It-effects on WPI, see unabridged German version or in the Summary table.

Emergence of the Different Spheres of W²

So far, we described the It as new strange dominant, which core is made out of All² (pro/contra) and Nothingness². Now we will see, how the It expands and how It causes new strange realities (WPI²).

This graphic shows how the It (including all It-parts) irrupts in the first-rate reality and what is created by that:

1st The created second-rate reality (here: world, people, I) is being dominated by the It-parts.

2nd WPI are put in a suppressed, relativized position (illustrated by the gray shade). They are also changed in the sense of the respective It - they become ‘it-similar’. On the other hand, you can see that WPI is sometimes able to get something positive from pro-sA-parts (‘hyperforms’) because the It incorporates those parts as well.

3rd The It-parts are in italics to show that they too are changing. They adapt to the new strange reality, too.

4th The dashed line shows the loss of first-class reality.

5th The inner splittings of the It and also the WPI are indicated by the solid lines.

---

52 - The terms ‘reality’ and ‘world’ are often used synonymously and abbreviated ‘W’. Otherwise, the concept of reality is superior to that of the world. I could not abbreviate reality with ‘R’ because that abbreviation stands for the Relative.

- Second-rate is not equivalent to the meaning of a first-rate Relative.

- The terms ‘reality’ and ‘world’ also include whole societies, their cultures and the environment.

53 - As I read after the conception of this publication, C. G. Jung also speaks of different realities, whereby his concept of a “second reality” resembles the concept of the “first-rate reality” used here, and vice versa, his concept of “first reality” resembles the concept of “second-rate realities” used here. (See also B. Staehelin: ‘Trust and Second Reality’).

Also, the term of the second worlds used in general language usage says the same thing.
The It works in the same way how it is. It is totally pro or totally contra or totally 0 and causes WPI also to become too pro, contra or 0. Therefore, one can speak of a "principle of creation of a too equal, an opposite and nothingness" in the second-rate realities caused by the Its.

The It determines the specific reality, changes the reality and makes it similar to the It. The difference, however, is that the action described occurs at the expense of the units affected since this process is associated with a loss of prime reality, even though it seduces the oppressed person with greater benefit in the beginning. Different Its determine in the form of the prevailing zeitgeist various groups or societies or generations.

The following spheres of these second-rate realities (WPI²) shall be distinguished:
1. The It (as a dominant center).
2. The sphere dominated by the It, which can be subdivided into:
   - Pro-sphere (= + hyper-forms with Co-forms, participants, functionaries, followers, accomplices).
   - Contra-sphere (with opponents).
   - 0 sphere, negated or sacrificed sphere.

The individual spheres overlap.

[Basic possibilities of deviation from the optimal probably reflect a similar classification: too much (= pro-forms or hyper-forms), false (= contra-forms) and 0 (nothing). Incidentally, I think that the mental disorders discussed later have similar patterns, too.]

Chronological sequence: At the beginning, there is a pro-dynamic: The It first forms a pro-sphere (+ hyper-forms) in WPI - but at the cost of first-rate reality. Its loss causes the formation of the + hyper-forms, which finally become so expensive that the system² tips over to the opposite (contra or 0 forms). (→ Reversal into the opposite)

Generally formulated: pairs of opposites* exist at the expense of first-rate reality. If a pole* is too expensive, it turns into an opposite (or vice versa). The system² can oscillate between two extremes until it dies or finds an emergency solution or the actual solution.

Examples, see in 'Personal Relationship Disorders'.

Important:
1. All Its require sacrifices.
2. The sacrificial-sphere of WPI is getting bigger throughout the process because the Its are using WPI to stay alive and to stay dominant.
Roles of the It(s) in W² as Dictators, Parasites and Offenders

In the second-rate realities, the Its are like dictators with their helpers, that dominate everything else in their territory. They also can be compared to parasites/ viruses/ demons - depending on their respective properties. The Its force their programs onto the realities, usually by using the principle of all-or-nothing. Just as the examples demonstrate, they act in various ways. Sometimes their actions are paradoxical or contradicting, but they are never solely negatively. Especially in the beginning, their effects appear to be very positive. In the long run, however, they become disturbing and pathogenic. Everything is subordinated to them: the truth, the freedom, the reality, other people and finally the affected reality resp. person itself. Although the person seems to be heightened in the beginning, he/she ends up being degraded. (It as offender and the Person as victim see below).

Hierarchies in W²

There are rigid hierarchies from It/sA to its R, as well from It/sA to other It/sA. (Typical for W²).
Second-rate systems of our inside can be compared to Totalitarian states: There is a central, powerful It that dominates everything, such as a dictator. One level below that, there are contributors/ participants/ functionaries, and on the bottom are powerless people, who are receiving the orders. The system is very sensitive: If only one of the participants is being questioned or attacked, the whole system is endangered. Therefore it reacts accordingly hard and merciless but it also sacrifices its own contributors if necessary. The It subjugates its own Relatives like subjects. Although it gives them a second-rate center/sense/support, it takes away their independence. The new strange Relatives have to sacrifice themselves for the It if there is any kind of hazard. An It, however, will never sacrifice itself for its own members. However, in the end, the It is also powerless if it is without its Relatives, its subordinates. It can be compared to dictators who are quite helpless without their people. Thus, the Its are overpowering as well as powerless, (pseudo)absolute and irrelevant at the same time. (Compare to Therapeutic hierarchies of the first-rate reality)

Hypotheses about the It-effects

• The Its affect not only the individual but also entire societies - ultimately our world as a whole. (More later.)
• The Its change WPI in their sense. That WPI becomes `It-similar. (Just as the other hand, It adapts to WPI).
• The It-effects are not total, but they are all the stronger and pathogenic, the larger the difference is between the sA and +A.
• The Its work beyond their own aspect.
All Its cause changes in all of the 7 aspects of dimension and in all of the 4 main aspects of
differentiation.
The It of a certain aspect also causes the main changes/defaults in its specific aspect, while It causes side effects but also facultative effects in all the other aspects. Example:
Absolutization of truth has a special impact concerning the question true or false but it also has an impact on all the other aspects. Suppose a family has absolutized truth, then the family is subjected to the dictates of unconditioned truth-telling. This sa truth* will then also determine certain spheres of being, life, the qualities and relationships (BLQC) of the family. Also, two opposite poles, which can be called "lie" and "indifference" arise. (See the section 'Spreading and compression').

• All Its can have all results - also positive ones

All Its are principally able to cause any kind of second-rate forms.
All Its have all kinds of results, negative and positive results. I.e. a –It may cause +² and a +It may cause –². Therefore, the reverse side of a –It can have positive effects and the reverse side of a +It can have negative effects. For example: I am not allowed to feel good, I am not allowed to accept love, love is negative; If I am being hated it is positive. Or illness* is giving identity² or sense³ and so on. Also: Every It may cause illness, as well as health. Although the It usually causes illness. The contradicting effects of the Its are important for understanding the paradoxes and certain psychopathologies.

• The juxtaposition of contradictions and the difficulty of understanding the It.
The strangeness, the contradictory, the split, the fused, and in the truest sense of the word 'craziness' appear to be particularly striking as It-effects.
Here, I mainly use very general and basic terms that change when used in specific spheres. Splitting of a married couple would be called divorce or breakup, a splitting of the inner Self would be referred to as split personality or schizophrenia. However, I believe that the basic principles of the emergence of those so-called second-rate realities and their characteristics, are very similar and are connected with each other.

The new, strange, second-rate realities lost the actual Absolute and are therefore not unequivocal, unique (etc.) but ambiguous, paradoxical, contradicting (etc). This contradicts our usual thinking and talking. We speak possibly of the fact that this or that person is chaotic, another richly, a third haughty. Or that the environment is either way etc. I.e. we often see only the superficial, "activated" pole of something. But in fact, the second-rate reality or the person also carries the corresponding opposite and a 0-part in itself. Therefore we have per se to do with doubly or triply split units, so for instance with ‘finite infinity’, ‘dead life’, ‘poor wealth’, ‘empty fullness’, ‘strange Self’, ‘sweet revenge’, ‘liberating illness’ and so on, but that's not what you say.

54 This ambiguity of our existence has been portrayed authoritatively by H. v. Hofmannsthal (for example, in his "Chandos Brief"), Novalis, and more recently P. Auster.
It-effects on the Dimensions of WPI

About a1: Disturbance of the Absolute

“*I am the spirit of always saying no ...*” Mephisto in Faust

With regard to the It-effect in this aspect, one can formulate:
It negates, disturbs or hyper-absolutizes WPI.

About a2: Disturbance of Identity

Referring to the It-effects in this aspect, one can formulate:
It alienates, uniforms or hyper-identifies the spheres of reality in which it penetrates.
(More in "Disorder of the person’s identity").

About a3: Disturbance of Reality

Referring to the It-effects in this aspect, one can formulate:
It derealizes, falsifies or over-realizes the spheres of reality that are dominated by It.
Hypotheses: Not only the It in this aspect but also all the Its of the other aspects cause some sort of loss or falsification of reality. Artificial realities are being created and the actual reality will be experienced as falsified or negated. On the other side, a part of reality can become one-sided or unambiguous (‘hyper-reality’) due to hyper-realization.

About a4: Disturbance of Unity

Referring to the It-effects in this aspect, one can formulate:
It chaotizes or splits or fuses subordinated spheres of reality.
(More in "Disorder of the person’s unity").

About a5: Disturbance of the Unconditioned

The Its in this aspect unsettle, misprogram or determine and fix.
Thus, the corresponding Its generate fixations, cause unconditionals, provide preconditions, urge, admit no exception - and on the other hand: Its release and forsake WPI.

About a6: Disturbance of the Priorities

The Its in this aspect uproot, dislocate or make extremes.
Its make actual priorities as second-rate or negate them.
They also generate "hyper-centers" and "hyper-causes" (e.g., in the form of false causes).
Also: Results will become causes/ and causes become results or nothing.
(Further, see "Causes and Results" in Metapsychology).
The It/sA are often like exponents: They potentiate a negative or a positive situation.
The Its of this aspect also have effects of Its of the other dimension aspects. All Its also lead to more or less great loss of overview meta-level/ "horizon".\textsuperscript{55}

**About a7: Disturbance of Independence**

WPI become due to the Its more or false dependent or -independent and the Its dominate and automatize WPI-parts.

**Changes of Differentiation**

**The 4 Main Spheres of Differentiation**

Overview of changes:

**About I. Disturbance and Reversal of Being**

„It always happens the same in history: an ideal, an elevated idea coarsens itself, is materialized.“ (B. Pasternak)

The Its disturb and mistake matter and spirit.

The Its **destroy, materialize** (reification) or **ideologize** WPI

That means that mechanical or physical laws and patterns often are foregrounded and dominate the spirit in the second-rate realities that are determined by Its. It also means, that the second-rate being is mainly too material, objective and tangible and that the realities are more monotonous and mechanized. People who are so constituted come close to robots and machines, and have corresponding dynamics (↑ functions) - or it is a being full of ‘strange spirits’ or it is both, side by side.

(See also corresponding experience in a psychosis, for example, later on).

**About II. Disturbance and Reversal of Life**

The Its disturb and confuse life and functions. The basic impacts in this aspect are:

---

\textsuperscript{55} Parallel in the literature: "The lost horizon" by James Hilton.

\textsuperscript{56} They have, as already mentioned, the characteristics of the Its, too.
The Its gain life and vitality and WPI only function or die. (Inversion of life and functioning). Only in the role of a participant, WPI will be hyper-vitalized.

About III. Disturbance and Reversal of Qualities

The Its disturb and confuse the qualities. The Its in this aspect have gained absolute quality, while WPI only receives a relative quality or no quality at all. They disqualify or misqualify WPI. The misqualification may also contain that they put WPI in the role of a participant and functionary and then WPI will be of oversized, quasi-absolute importance. That importance can be positively or negatively connoted. The inversion of qualification may also consist of the inversion of negative and positive or other qualities.

About IV: Disturbance and Reversal of Subjects, Objects and Contexts

The Its disturb and confuse subjects and objects. Due to inversion, the Its as original objects became subjects and cause now original subjects (especially persons) to become objects. The person is no longer the master in its own house. This will be discussed more when talking about the It-effects on a person (Subject-object-reversal). The Its in this aspect also cause mistakes of the connections: Relative connections become unconditional, absolute connections (e.g., guilt - punishment) and relative disconnections become absolute. That causes misconnections and misseparations to appear.

Change of Units

1. Negation (All or Nothing)

"Since Copernicus, man seems to have got himself on an inclined plane - now he is slipping faster and faster away from the center into - what? into nothingness?" F. Nietzsche

The main effect in this aspect is: the Its negate and destroy. More specifically: They create All² but especially nothing². As ideologies, they mainly appear in the shape of totalitarianism, reductionism and nihilism. They alter WPI especially in a nihilistic, total and reductionistic way, so that WPI is being negated, destroyed, isolated, or (as a participant) totalized. This mainly causes a loss of first-rate all and individual. Therefore, the reality appears to be emptied, isolated or totalized. The splitting can be called 'all-or-nothing-splitting'. The It 'claims' all* or nothing*.

An example of that would be the digitization of the world, of life with all its advantages and disadvantages. If objects are digitized, it has rather advantages but the digitalization of the person originates considerable disadvantages because the living is lost.
2. Profanation
The main effect in this aspect is: the Its profane.
The Its as ideologies, especially in the shape of superstition, spirituality, secularism and atheism profane, demonize or idolize WPI. WPI thereby loses above all first-rate the positive Absolute (God, love, sense) and thereby there originates a state of godlessness, lovelessness and futility or strange gods.

3. Reification and False Personification
The main effect in this aspect is: the Its (especially personal Its) reify the personal and personalize themselves\textsuperscript{57} or other things. (Further, see the Disorder of person and things)

4. Deindividualization
The main effect in this aspect is: the Its de-/ misindividualize or hyper-individualize.

5. Despiritualization
The main effect in this aspect is: The Its causes soullessness and spiritlessness and somatize (themselves or something). The Its negate or even kill actual spiritual, mental or psychical areas or change them. Spiritlessness and soullessness are being created in certain systems (e.g., something becomes senseless, spiritless or is being ideologized.) It-effects of this aspect can be found in all of the ideologies. Especially they can be found in the spiritual sphere as a consequence of spiritualism, in the psychical sphere as a consequence of psychologism, and in the physical sphere as a consequence of the so-called healthism.

Detailed representation concerning the person, see chapter Emergence of the strange, second-rate Personal.

Illustration of Different Strange Realities
Generally speaking, I believe that the Its affect our world as a whole. This creates a juxtaposition of first and second-rate realities. (→ The juxtaposition of different realities)
Here are concrete examples.

Different Social Systems
Many social systems show some of the features of the named It-effects. For example: splittings in poor and rich; powerful and powerless; alive and killed and so on, or in the shape of contrary social orders like communism/capitalism; or in the form of deadly ideologies that may cause consequences like the Holocaust, genocides, racism, nationalism and so on. They are also made up like the all-or-nothing-principle resp. pro- or contra-

\textsuperscript{57} Keyword ‘homunculus’.
principle and can be divided into disturbing-sphere, participant-sphere and sacrificial-sphere. As mentioned before, all of the second-rate realities show the named characteristics and this the more, the more a negative became positively absolutized or a positive negatively absolutized.

Otherwise put: In a society, where brutality, contempt of mankind, aggression, war (and so on) is viewed positively and opposite trends are suppressed at the same time, the negative characteristics of the second-rate reality will be seen more and more. A society, where humanity and peace (etc.) are being valued, and that therefore is very similar to an actual positive world, is less divided and less disturbed. However, here on earth, no society can be formed that is perfect and without the named second-rate characteristics.

**Different Environments**

It/sA and their consequences can also be found outside of the person in different environments.

Example: Ecological damage, armories (etc.), as results of the It/sA and with effect on the person.

Concerning families see later in `Personal system and relationship disorders`.

**Virtual Worlds**

The virtual worlds, that are gaining importance, also belong here if they dominate the person.

**Ideologies**

Important mindsets, ideologies, or religions belong here if they dominate the person. They are not the bad/evil themselves because they also have positive parts. They are determined by collective strange Absolutes. They should not be fought but criticized and a person should pay attention to them and should try to integrate the positive aspects.

In human history, there were many misabsolutizations. Usually, they can be recognized as the named ideologies including their advantages and disadvantages. They are forms and aspects that are always created in new ways that are still the same eventually and that are all representing the same or similar 'games'.

The most important ideologies have already been mentioned (See `Summary table` column E and Correspondence with Its). Especially the social sciences, mostly the social psychiatry and the systematic therapies focus on these topics. In contrast to them, I will try to present known problems from a new perspective. I repeat that I am convinced that the mentioned second-rate forms and their dynamics cannot just be found in a general form (environment etc.) but also within the person (and they are both connected to each other). Here as well as there they are essential foundations for diseases and just as one can speak of sick people, one can also speak of sick (and disease-causing) societies and environments.
Summary

The general It-effects can be summarized as following:
They create new strange realities, which are called second-rate realities, too.
Those second-rate realities are structured according to all-or-nothing-pattern: The suppressed reality-sphere is either being adapted to the certain It completely, or it is seen as contrary/hostile or is being negated and liquidated.
Considering the different dimensions (a1-a7), the Its mainly cause the following changes:
Negation and relativization; homogenization and alienation; derealization and falsification; conglomeration and splitting (and merging); destabilization and malprogramming; dislocation and displacement; dependence and suppression of different realities (WPI).
Considering the 4 main differentiation, the Its mainly cause the following changes:
Destruction and materializing; killing and functionalization; dis- and false qualification; desubjectivization and instrumentalization; disbanding or defective connections.
Considering the pr units: Destruction and isolation; negation and profanization; depersonalization and reification; deindividualization and massification; despiritualization and somatization; castration and disorder of love.
The listed terms are meant to be understood as keywords - More can be gathered from the following chapters about the person or the Summary table.

EMERGENCE OF THE STRANGE, SECOND-RATE PERSONAL

Introduction

So far, we briefly discussed the emergence and the general effects of the Its. Now, the effects of the Its on the person (P) will be illustrated more detailed because it´s for our topic most important.
Note: For the sake of variety, I sometimes only speak of one It, sometimes of the Its in the plural or of three I-parts (pro +, contra –, 0).

Comparison of the It-effects on the Reality in General and the Person Specifically

The effects of the Its on the person are very similar to the effects of the Its on reality in general. The main difference is that the person has direct access to the absolute-sphere. That means that P has an absolute choice. In contrast to that, non-personal subjects do not have the choice to accept nor to reject an inversion. Only the choice and/or the identification with an inversion can lead to the emergence of a personal It. In essence, then something becomes personal and personal becomes like something.

Transference of Its from Other Realities

The Its can originate from the person himself or can also be transferred to P by other systems. That transference happens over the systems A-spheres. Disorders in society, such as splittings can cause disorders (splittings) within the individual people. The transference of disorders does not occur one to one, i.e. the disorder within the person does not have to be
the same as the disorder in society. Due to the fact, that the opposites are very close to each other, the individual is often affected by one of the contrary disorder!

**Person-It-Reversal**

As well as the It changes parts of the reality after his picture, as described on top, it also changes parts of the person after his picture. In this chapter, we will discuss how the It forces its characteristics onto the person. I will call this general change person-It-reversal. The It gets quasi-personal characteristics and becomes like a person and forces its characteristics onto the person. Those changed personal spheres will be called second-rate personal = P².

But besides these changed, strange personal spheres, there will always be 'healthy' P¹ parts remaining, which is very important for the therapy.

The It and the person switch roles.58

Considering the 7 DM-aspects:59 The It becomes similar to the first-rate personal: pseudo-absolute, pseudo-self, pseudo-real, pseudo-uniform, pseudo-autonomous, pseudo-individual and pseudo-spiritual.

On the other side, actual personal aspects are changed by the It and become: too relative resp. irrelevant, strange, non-actual, divided, heteronomous, materialistic and apersonal.

With that, the person becomes like the original It. Considering the DF-aspects: The person exchanges (lively) being with only existing, life with functioning, heavenly luck with earthly thrill and the subject role with an object role. Now, the person is an object and dominated by the It as a strange subject.60

Besides, the person exchanges individuality with egocentricity or uniformity, freedom with distance or constriction, reality with unreality or ‘hyper-reality’, security with defenselessness or armor, and so on. (See also ‘The subject-object-reversal’).

58 For the person-thing-inversion, see later.
59 → DM aspects: the 7 dimension aspects are meant.
60 Instead of the rule of the It over the person, one can also speak of the rule of the objects * (of the absolutized objects) over the person as subject. (See later). Also Th.W. Adorno has dealt with this.

“Objects” can also mean the rule of the material over the spiritual. So also the rule of the actually dependent over the independent.
All Parts of the P² (Overview)

- Concerning the spheres, P² consists of the strange Self in the absolute-sphere and its relative spheres.
  (As mentioned, the strange Self is only apparently absolute but it is absolutely experienced by the person concerned.)
- Concerning the rank, P² is of second-rate or 0.
- Concerning the orientation we find three P²-parts:
  1. pro- resp. +part (hyper-forms/participants/functionaries)
  2. contra- resp. –part
  3. sacrificial-part (P0)
There are also (still) first-rate parts = residual-P¹.

The strange person (P²) is multiply divided:
On one side the person is similar the It, and on the other side he/she is mainly their victim; On one side the person is his/her own master and on the other side he/she is his/her own slave; On one side the person is his/her own God/idol and on the other side his/her own devil/enemy; On one side the It of P became personal and on the other side the person became like a thing; On one side the It of P became strange subject and on the other side P became strange object.

The introduced classification of the second-rate personal and the different parts of p It are arbitrary.
It mainly shows the negative nature of the Its. The It-core in its role as a second-rate subject mainly acts as the offender. In its further sphere, there are the most damaged or sacrificed parts. However, we must relativize this point of view because the Its also have positive

---

61 In this table, 'strange' is only a keyword for all possible second-rate characteristics.
aspects for the person (especially at the beginning) in form of + hyper-forms of which the person participates (as participants and functionaries).

Because it is important, I repeat that P² has not only disadvantages but also hyper-positive aspects such as hyper-self, hyper-identity, hyper-security, hyper-well-being, hyper-activity, hyper-vitality, too much love and so on.

Is the Strange It Some Kind of Homunculus within Us?

- The It in this publication is very similar to what is understood when using the term homunculus. I mentioned it already. The It and homunculus are similar when it comes to the idea of something being created within us that has personal characteristics, especially a certain autonomy, that cannot be directly willingly influenced by the person.
- The similarity of an It, or of a homunculus to a person is the greatest when the It represents a real person, e.g., when another person was idealized by the affected person. (Also see: causes for Delusion and hallucinations).

Depending on how useful or harmful the homunculus is within us, it effects like a dictator and tyrant, a virus or a parasite. But the best-case scenario is that it lives within us as a symbiont. In that case, it is neither the good nor the bad.
- The ‘homunculus’ usually has a complicated structure formed of different Its that operate jointly on the one hand and fight and hinder each other on the other hand.

Changes of the Personal Dimension Spheres

Every It/sA disturbs more or less all 7 dimension aspects (DM) of the person. They disturb above all the right of self-determination, the identity, the authenticity, the uniqueness, the unity, the unconditional dignity, the right to live, the independence and the freedom. It can be compared to a disorder of general human rights.

a1 Disorder of the Absolute Area of a Person

The Its, which affect this aspect, have a nihilistic or relativistic or absolutistic character. That means:
- they negate the personal Absolute, or
- they relativize the personal Absolute, which will also be alienated, divided, suppressed, falsified and insane, or
- they may also hyper-absolutize the absolute-sphere of a person. E.g. by the idolization of a certain part of the person.

The main effect of the Its on people is their negation. With that, the person loses the first-rate personality, the Self and other connected characteristics on the territory of an It.

P Loses More than He/She Gains

An It was created as follows: mainly too pro (hyper) too strange resp. contrary, less 0.
The impacts of the Its on P are the other way around: The focus is on the negation of P, then there is the alienation and creation of opposites, and then there is a little bit of pro-participation. That means that the It mostly steals parts of the person and only gives back a little part. Therefore, the It is mainly acting as an offender and the person is mainly the victim.

The Loss of one Aspect also Means the Loss of Other Aspects.

For example: The loss of identity is also a loss of security, reality, unity of a person, their priority and basis, their independence; and also means the loss of the first-rate spirit, live, quality, subjectivity and so on - but also first-rate relative spheres are being lost.

**a2 Disorder of the Person's Identity**

The Its of this aspect mostly cause P to become too uniform, alienated, or over-identified. Ideologies of this aspect would be uniformism, determinism and philosophies of identity. Everyday examples are sentences like “you are just like your mother”, “you are a blighter”, “you are the greatest” (and similar).

In this aspect, I also discuss the following topics because they are essentially related to identity:

1. Transformation and alienation
2. The emergence of paradoxes.

**1. Transformation and Alienation**

In our life, we are confronted with the phenomenon that everything that is psychically relevant can be transformed.

In a passive direction, from outside to inside: For example: consequences of other people’s actions can be internalized. In the active direction, from the inside out: Physical or psychical things are expressed in actions and functions. There are many changes on the way from outside to inside or vice versa.

We can also find analogous changes in the language.

I want to give a specific example of that. Suppose someone is raised in a chaotic family, then he can become chaotic. If we analyze the process, we will find out that there are four steps.

1. 1st step: The parents confuse the affected person.
2. 2nd step: The person is getting confused.
3. 3rd step: The person is confused.
4. 4th step: The person is chaotic.

Let us also consider the additional, following steps:

- 5th step: The strange Self (sS) (here: the confusion*) acts in him: It disorders and dissolves him and
- 6th step: a) P disintegrates and b) and his actions become more disordered and irregular.

What happened? To answer that in a very basic way, one could say that the parent’s behavior causes something to emerge within the affected person. Something, that acts by
itself and causes the person to malfunction and act false.
The analysis of language shows the change in a similar way: A verb (to confuse) becomes substantive (the confusion) which makes a verb again. More specifically: 1st step: verb (to confuse) → 2nd: processual passive (getting confused) → 3rd: participle (is confused) → 4th: adjective (chaotic) and a new substantive (the confusion) → 5th step: The strange Self (sS) (here: the confusion*) acts in him: it disorders and chaotizises him and 6th: a) processual verbs (the person disintegrates) with b) new adverb (actions and procedures become more disorder and irregular).
The sequence illustrates how in the person concerned strange-new can originate, which affects by itself (!) and changes our actions and functions. The actions also get a too functional character because they don’t come from the real I-self, like the first-rate actions but from strange Selves resp. strange-Egos.
Broadly speaking: The I-self lives above all but the strange-Ego functions or reacts more.
Just as a quick reminder, I believe that the described changes are only possible if the absolute sphere of the person is disturbed. An actual Absolute compensates such disturbances.
Disturbances are caused seldom by one sA only but more often by many sA with corresponding mainly negative actions. Example: One cannot only be confused because he/she has been confused by others but also because the person has become disoriented, oppressed, disenfranchised, devalued, infantilized, etc.
a) From the inside towards the outside:
The behavior of a person is alienated by strange-Selves in the person (P).

b) Exterior signals are being alienated by strange-Selves of a person, too.

2. To the Emergence of Paradoxes

I saw various things that looked the same and same things that looked different and I searched for the reason.

Hypotheses
Paradoxes may occur:
1. due to inversion, when first-rate aspects become second-rate
or when second-rate aspects become first-rate. 62

2. If sA change their characteristics,
   a) if one or more equal sA become contrary,
   b) if one or more contrary sA become equally.

![Diagram](image)

This Fig. is intended to show that one sA has three parts that are quite oppositely connoted, and that the 3 opposing sA can have the same connotation if a backside is activated. That paradoxically, one can experience the same sA quite opposite, and a contra-sA just like a pro-sA, if its backside is activated. Or you can also experience a pro-sA and a contra-sA as 0.

(See also ‘Paradoxes and Schizophrenia’ and ‘Inverted, paradoxical world’).

**a3 Disorder of Personal Reality**

The It that mainly affects this aspect comes from ideologies like realism, objectivism and positivism.

It is hyper-realistic, false and deceptive or unreal.

It effects on P or parts of him:

1. It derealizes a person.
2. It distorts and inverses a person’s reality and causes a contradiction between different realities.
3. It hyper-realizes a person. P often has a compensatory-profit then, by a new personal reality that appears to be positive in the beginning.

An It paradoxically causes the affected person to view unreal aspects of him/herself as real and real aspects as unreal.

**a4 Disorder of the Person's Unity**

Main effects:

1. It splits the person.
2. It creates new strange split personal parts that contradict each other or fuses personal parts or
3. It creates new strange personal hyper-units by fusing.

Possible ideologies: Monism, syncretism, structuralism, pluralism, atomism, reductionism.

Paradox: The person experiences the actual personal unity now as dissolved or split or other personal parts fused.

An additional paradox is that the same personal part may be experienced in different ways.

(See also: Splittings and fusions in schizophrenia).

---

62 That, as is known, paradoxes can arise through the confusion of object and meta-level, says something similar.
About Fusions

“If I do not have it, I fall apart” - a patient

The It fuses with parts of the person or fuses different parts with each other. It is as if parts of the person are being compressed and merged. That may cause a feeling of being a compact wholeness, that saves the person from being divided. Although this may be the case temporarily, splittings are encouraged in the long term by the fusions. Fusions and splittings occur side by side or alternately. What can be split (see the section below) can also be fused by the It. (E.g., subject-object-fusion, fusions of different objects, etc.)

About Splittings

(This topic reappears when discussing Schizophrenia).

Inversions can lead to splittings in all known spheres:

This means that there can be divisions in all aspects of the dimensions and differentiations. (e.g., subject-object-split, matter-spirit-split or soul-body-split).

Like a single person, so a whole group of people, a society (like any system) can be split (and also fused, suppressed, scared, etc.).

Double messages, paradoxes, contradictions (or similar) are caused by splittings. Messages that are too one-sided or too general are caused by fusions.

The main splittings, or breaking points within P:

\[ P^2 \begin{cases} \text{pro} \mid \text{contra} \\ \text{ALL}^* \end{cases} \]

The main splittings in \( P^2 \):
1. between the first-rate \( P^1 \) and the second-rate \( P^2 \).
2. between the all and the nothingness of \( P^2 \).
3. between the pro- and contra-parts of all.

Additional splittings are possible between all parts of \( P^2 \).

Briefly about Subject-Object-Splittings

Due to an inversion, a first-rate subject becomes an object. Or it may only function as a second-rate subject, as strange-I and also loses the connection to its original first-rate objects.

That causes a splitting within the subject-sphere into a first-rate and a second-rate subject, as well as a splitting of the strange subject and a first-rate object.

Between a first-rate subject and second-rate objects emerge only relative contradictions because the first-rate subject can tolerate second-rate objects.
Briefly about the Emergence of Opposites

Inversions cause opposites: 63
Consequence: Side by side of opposites:
narcissism # self-hate
fear # lust
hate # love²
too much proximity # too much distance etc.
(You can read the possible opposites in all aspects in the Summary table in column N. They are marked there on the one hand by ↑ and on the other hand by ↑. Otherwise see also ’It-parts, opposites ...’).

a5 Disorder of the Person's Safety and Freedom

1. This It makes the person insecure. It causes a loss of safety and freedom.
2. It misprograms the person. It sets up demands on P. It forces, compels and does not allow exceptions.
3. It causes hyper-safety and hyper-freedoms.
   Its are like golden cages within our soul.
   Possible ideologies: Dogmatism, determinism, partly skepticism, libertinism.

a6 Disorder of Personal Bases and Levels

1. The It uproots and levels P. It steals the person’s actual basis.
2. It twists and falsifies the personal basis: what used to be peripheral, will be the basis and what used to be the original basis will be the new strange periphery. On the one hand, the It uproots and undermines the personal base and causes a displacement of P on the periphery. On the other hand, It establishes many new centers. It results in a mix-up of center and periphery.
3. It forms also personal hyper-centers. The person has compensatory-profit with such new strange personal centers.
   Possible ideologies: fundamentalism, radicalism, extremism, eccentricity.
   Always there is a loss or a disorder of the first-rate personal center/ base.
   Also: All inversions resp. It/sA cause more or less of a loss of “height”/ overview/ meta level/ horizon.64

About the inversion of Causes (Problem Shifting)

The Its shift causes and problems. Then we don´t ask, for example, anymore for the real causes of our illnesses but only for secondary causes. (Further, see ´Causes and Results´ in Metapsychology).

63 But also pacts, see elsewhere.
64 An important symptom in schizophrenia, see there. E.g., pictures of schizophrenic artists are usually without horizon.
a7: Disorder of the Person's Independence and Ties

1. The Its cause the person to be dependent. They steal the person's autonomy as well as good ties. Or
2. The Its inverse and alienate the personal autonomy and ties. Or

The person has a substitute gain by this new strange autonomy - or P has the expensive advantage that he/she no autonomy must venture, no responsibility must take over. Possible ideologies: determinism, evolutionism, philosophy of immanence.

In general, there will be a loss/disorder of the person’s autonomy and tie.

Changes of the Personal Differentiation Spheres

Main Differentiations

I. The Its Change the Personal Being

Main disorders:
1. The Its destroy the personal being, or
2. The Its cause a disorder, inversion or alienation of the personal being. They create new strange personal being. They change the personal being in their sense. Then the personal being is similar to the being of the Its.
3. The Its create personal hyper-forms.

II. The Its Change the Person's Life (Dynamics)

1. The Its kill, or reduce life, or
2. The Its disturb, twist and falsify our life. That life is similar to the life of the Its. They replace living with functioning and role behavior.
3. The Its cause above all at the beginning hyper-vitality, "hyper-life", hyper-activities. The person appears especially as an automat, machine, official, apparatchik, role player and or life seems dead and dead things appear alive.65

III. The Its Change Personal Qualities

1. The Its disqualify the person. The result is a loss of primary personal qualities.
2. The Its change the qualities of the person, above all because they falsify these, twist and disturb.
3. The Its can cause personal hyper-qualities - as a rule, linked with accordingly raised emotions.

65 Schizophrenic people experience often like that.
Paradoxes due to the Inversion of Qualities

The sensations of various qualities of $P^2$ do not match the actual qualities. In this way, something negative can be perceived and handled positively and something positive negatively. For example: Illness is better than health, the object-role is better than the subject-role, matter is more important than soul, things/objects are more important than people.

Two Kinds of Luck (and Misfortune) in Two Kinds of Realities

"First I make you happy," says the ideal "but then I will kill you!"

In the first reality rules the 'holy spirit'. In the second-rate realities, something rules what one could call „(un) holy substance". The „holy spirit“ is God, is love. What, however, would be the „(un) holy substance“ after which we often thirst more than after the Holy Spirit? These are our +Its which are like drugs or symbionts in us, on which we are dependent because they give us something that we believe to need absolutely.

It is known, that endorphin and dopamine are being released in certain moments of joy. Those hormones can be compared to the substance that we can receive from our Its.

What do the two kinds of luck look like?
1. the actual luck: has no costs, comparable to luck through love.
2. strange 'luck' such as libido, ecstasy, rush, high, flow and thrill is addicting and therefore there is a cost.

That kind of luck is dependent on different substances, situations or people. They promise “speed” and “power”, they “boost”. The dynamics are marked with all-or-nothing, with a highly increasing $+^2$ curve, that is soon to be decreasing and to drop into the negative if there is no new “stuff” being given.

I believe that anything that is positively absolutized can cause an addiction.

Especially the non-substance addictions are underestimated! 66

Only the actual +A has no potential to be addicting and even gives heavenly luck.

$P^2$ can perceive happiness as misfortune or misfortune as happiness, as 'black happiness' (Victor Hugo) when the misfortune affects others.

Two Kinds of Misfortune:
In parallel, I am convinced that there are also two kinds of misfortune: the actual and the strange.

By that, I mean that we regard relative misfortune as absolute misfortune when we are dominated by a -sA / It. An example would be the loss of the mentioned (pseudo-) absolute

66 I heard again and again from job addicts that their job is their hobby and their fun. What could be wrong with that?
happiness. In itself, P¹ would not have to fear earthly misfortune. The absolute misfortune is only the negative Absolute (−A).

IV. The Its Change P as Subject and the Personal Connections

1. The Its desubjectivize, which means that P loses his/her first-rate subject-role. The Its destroy or chain personal connections.
2. The Its inverse, alienate and disorder P in his/her role as subject: They turn P into an object. (→ Subject-object-reversal). P² appears as object.
3. The Its make misconnections: Incoherent topics become coherent and vice versa.

The Its create personal hyper-subjects and function as such. (Also: Its create hyper-objects).

The Subject-Object-Reversal

Here, an important characteristic of the ItsA, or the strange Sel is represented. They now take the position of a quasi-personal, living subject and P/I, on the other side, takes the position of an object - a situation that is typical for mental disorders. This process can be referred to as subject-object-reversal because whatever is usually the object, became subject and whatever is usually the subject, became an object.

It is the "victory" of the object over the subject or the dictatorship of the objects. Who is actually acting, when someone says "I" am acting? Is it the I or is it an It? The subject-object-reversal also causes a change of the characteristics of the new subject and the new object: The original object does not become a "real" subject but a kind of subject, a second-rate subject. It plays the role of a subject but is not a real subject and can therefore be termed a "subjectoid" or "sobject" (meaning a pseudo-subject). Or the original object becomes a false object, a kind of "objectoid".

The same applies to the original subject, who can neither be a real subject nor a real object but becomes a second-class subject or object. Both are hermaphrodites. As a rule, a second-rate subject (subjectoid) is an object of one's own (or other people's) ideals. Such a second-rate subject can only see objects in other subjects and handles them as such. A second-rate personal / ego is usually the object of his own (or other people's) ideals. So a second-rate personal / ego sees only objects in other people and handles them like these.

Due to the subject-object-reversal, the original first-rate connection of subject-object is lost and a subject-object-splitting applies.
Besides the subject-object-splitting, there are **subject-object-fusions**, since the Its resp. strange-Selves cause splittings as well as fusions.

In relationships, the It mainly acts in the role of a (pseudo-)first-rate subject. That means that the It can directly cause processes, without P being able to influence it. In addition to dysfunctions, behavioral disorders are the result: behavior that is not (or only partially) influenced by P, so that the person feels powerless and controlled by extraneous power (especially in schizophrenia).

There is a parallel between subject-object splitting and **God-world-splitting**.

**Disorder and inversion of Bonding and Separation**

“The It misconnects, replaces, separates.” With that, there are disorders of connections/relations, etc. on the one side, and separation, splitting, etc. on the other side. There are new, strange connections/relations. (e.g., there are new problems at places where they do not belong, solutions are brought up where there are no possible solutions, etc.)

Loose relations become weldings, knots, chains: The Its create connections that are too stiff and automatic in shape of processes, procedures, automatisms etc. Examples: order and obedience; mistake and punishment; interpersonal: “tit-for-tat”, etc. There are also determinant connections that seem to be similar, such as it is described as a chain of associations in psychoanalysis.

(Relative) separations, differences become absolute splittings or unrelatednesses. Where there was a connection/relation, there is now separation. Where there were splitting and difference there is now fusion/welding. The associated symptoms play a major role in neurosis and psychosis ("craziness"). The "atypical connectivity" in autism could also arise in this way.

**Single Differentiations**

In the following paragraphs, I want to discuss some single aspects more detailed.

**Aspect 1: Personal Area of “All and Nothing”**

1. The Its **destroy**. There is a loss of first-rate personal all and nothing. (→ nihilism). The It also isolates.
2. The Its inverse and alienate everything personal.
3. It can also totalize (generalize) P-parts. That means Its can create "hyper-everything" (→ relativism).

About 1: The It wants everything for itself. It wants the whole person. If the person refuses, the It threatens P with the nothing. The It claims the right of exclusiveness. Motto:
“Whoever is not with me, is against me.”
The all says to Ego: “You are super good or bad.” And the Nothing says: “You are a nothing if you are not all!”

Aspect 2: Worldview and View of God.
1. The Its profane. They negate and replace God and love. They cause a loss of transcendence, of God, love and sense. C. G. Jung was convinced that the “loss of soul” was the main problem of the modern world. According to him, about one-third of his clients were affected by the “pointlessness and lack of relevance of their life”.
2. The Its of this aspect pervert and falsify transcendence (God) and immanence (the “world”). On the other hand, earthly, worldly matters are being idolized or demonized. It is the “Victory of immanence over transcendence.”
If we live in inverted roles or worlds, we are people without heaven, without transcendence, without God whose foundations are undermined, only because we trust the strange more than the real and have for it got false gods and false devils. Such as the subject-object-reversal, the God-world reversal is not only connected to negation and a change of God and world but also a God-world-splitting, or a God-world-fusion.
3. The Its may also cause an excessive and one-sided transcendence and immanence (→ Aspect).

Aspect 3: The Person and the Things
The P-changes, considering the three P²-spheres in this aspect can be illustrated as follows:
1. The Its depersonalize P. The result is a loss of first-rate personality.
2. The Its inverse and alienate the person and the things. Therefore the things will dominate the person.
“Victory of the things over the person”, KW: “factual constraint”.
3. The Its may cause hyper-personal or hyper-things.

About the Person-Thing-Reversal
An original thing has been personalized, while the person has been depersonalized and reified. Therefore whatever used to be “thing” or “object”, is now personal and the other way around.
The person also feels like a thing (an instrument, machine, puppet etc.) and/or like a strange person (represented by the dominating It) and/or like a nobody. 70
The inversion leads to mechanization of the person and to a humanization of the machine = alienation of the original human/alienation of the original machine.
Such as The subject-object-reversal, the person-thing-reversal does not only causes a

70 These characteristics, as also mentioned below, are found mainly in the schizophrenic psychoses.
negation and a change of person and thing and a person-thing-splitting, but it also causes a person-thing-fusion.  
(See more about ‘Person-It-reversal’ and The subject-object-reversal).

The following single aspects are part of the `Summary table` and are only discussed briefly. All Its change the personal aspects (as already described) in three basic kinds of ways: 
1. The Its negate the first-rate aspects. 
2. The Its falsify (~) the aspects. 
3. The Its cause specific hyper-forms. 
The main effects of It are negation and falsification of the person. Positive hyper-forms are especially found at the beginning of an inversion because they seduce the person. One-dimensional It-effects are very rare. Most of the time, multiple, contradicting personal forms are created simultaneously. 
Note: The partly named ideologies stand for many, often still more important unnamed individual or familial ideologies! (Further ideologies can be found in the Summary table column E.)

Aspect 4: I and Others

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>de-individualized</td>
<td>↓ I, individuality/community → loss of I, loss of you</td>
</tr>
<tr>
<td>mis-individualized</td>
<td>~ strange I</td>
</tr>
<tr>
<td>hyper-individualized</td>
<td>↑ Ego (Super- or Hyper-Ego)</td>
</tr>
</tbody>
</table>

Aspect 5: Spirit, Body, Mind

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>de-spiritualized, lifeless</td>
<td>↓ spirit, body, mind → loss of spirit, body, mind</td>
</tr>
<tr>
<td>somatized, mis-inspirited</td>
<td>~ strange spirit, body, mind</td>
</tr>
<tr>
<td>ideologized</td>
<td>↑ hyper-forms, ideologies</td>
</tr>
</tbody>
</table>

Aspect 6: Gender, Love, Sex

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>neutered</td>
<td>↓ sex, love, gender → without sex, without love</td>
</tr>
<tr>
<td>feminized, masculinized</td>
<td>~ sex, love, gender e.g., spare-sex, spare-love</td>
</tr>
<tr>
<td>sexualized</td>
<td>↑ hyper-forms (e.g., excessive sex)</td>
</tr>
</tbody>
</table>

Aspect 7: Emotions

The Its control our emotions/feelings.

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>unsatisfied</td>
<td>↓ conditions, emotions → apathy/insensibility, sorrow</td>

<tr>
<td>doped</td>
<td>↑ hyper-forms like a thrill, kick, etc.</td>
</tr>
</tbody>
</table>
Aspect 8: Will

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>demotivated</td>
<td>↓ will, voluntariness, goal → abulia/lack of will</td>
</tr>
<tr>
<td>mis-motivated</td>
<td>~ mis-aspiration, false will, addiction</td>
</tr>
<tr>
<td>hyper-motivated</td>
<td>↑ hyper-forms e.g., hyperbulia, also addictions.</td>
</tr>
</tbody>
</table>

Aspect 9: Ownership

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>exploited</td>
<td>↓ ownership → lack, defaults</td>
</tr>
<tr>
<td>indulged</td>
<td>~ false owning</td>
</tr>
<tr>
<td>supersaturated</td>
<td>↑ hyper-forms: overloading, hyperphagia.</td>
</tr>
</tbody>
</table>

Patient: “I am overwhelmed and buried again and again and have to dig my way out every day.”
Possible ideologies: capitalism, mercantilism, ascetism.
Note the book of Erich Fromm: ‘To Have or to Be’.

Aspect 10: Power and Abilities

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>weakened, overwhelmed</td>
<td>↓ possibility, power → powerlessness, weakness</td>
</tr>
<tr>
<td>mis-conditioned</td>
<td>~ mis-conditioning, false ability</td>
</tr>
<tr>
<td>hyper-, mis-exponentiated</td>
<td>↑ hyper-forms e.g., “omnipotence”</td>
</tr>
</tbody>
</table>

Aspect 11 Order, Necessity

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>disordered</td>
<td>↓ order, law → disorder, chaos</td>
</tr>
<tr>
<td>disorganized</td>
<td>~ false order, laws, necessities</td>
</tr>
<tr>
<td>forced, compelled</td>
<td>↑ hyper-forms e.g., determination, being fixed</td>
</tr>
</tbody>
</table>

Aspect 12: Obligations, Orientation

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>disorientated, distracted;</td>
<td>↓ direction → lack of direction</td>
</tr>
<tr>
<td>mis-regulated, manipulated</td>
<td>~ mis-direction</td>
</tr>
<tr>
<td>tempted</td>
<td>↑ hyper-forms e.g., moralism</td>
</tr>
</tbody>
</table>

In present, the distraction due to an enormous variety of media plays a big part.
Consequence: loss of direction and overview; Or: one-sided, fixed directions.
Possible ideologies: moralism, legalism / anitmoralism.

Aspect 13: Rights, Allowances

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>blocked, inhibited</td>
<td>↓ rights, control, freedom → loss of control, inhibition</td>
</tr>
<tr>
<td>mis-regulated, -controlled</td>
<td>~ compensatory-freedom/ -control</td>
</tr>
<tr>
<td>un- / hypercontrolled</td>
<td>↑ hyper-forms: hyper-freedom, hyper-control</td>
</tr>
</tbody>
</table>

Consequences of It/sA: exterior and inner totalized systems also produce areas free of the rule of law.
If $P^2$ offends against an absolutized superego, then it has no longer a right to grace and is to punished.
Possible ideologies: liberalism, laissez-faire-view, constricting ideologies. According to Lenin: “Confidence is good, control is better!”

**Aspect 14: Creativity**

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>sterilized</td>
<td>↓ creativity → lack of creativity e.g., stereotypes</td>
</tr>
<tr>
<td>falsely caused</td>
<td>~ false creations, ghosts</td>
</tr>
<tr>
<td>overgrown</td>
<td>↑ hyper-forms: over-production, excrescences</td>
</tr>
</tbody>
</table>

**Aspect 15: Actions/ Behavior**

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>paralyzed, inactivated</td>
<td>↓ success, experience → inactivity</td>
</tr>
<tr>
<td>mistreated</td>
<td>~ false deeds, compensatory-behavior, affectation</td>
</tr>
<tr>
<td>over-activated</td>
<td>↑ hyper-forms e.g., hyper-activity, hyper-kinesis</td>
</tr>
</tbody>
</table>

Possible ideologies: utilitarianism, pragmatism /hedonism.

**Aspect 16: Information**

Disorder of information processing and emergence.

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>not informed</td>
<td>↓ Information, certainty → defective vision</td>
</tr>
<tr>
<td>misinformed, lied to</td>
<td>~ false information</td>
</tr>
<tr>
<td>too sophisticated, precocious</td>
<td>↑ hyper-forms e.g., isolated knowledge, one-sided information</td>
</tr>
</tbody>
</table>

Possible ideologies: rationalism, scientism, skepticism, anti-rationalism.

**Aspect 17: Presentation, Expressions**

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>suppressed, masked</td>
<td>↓ expression, openness → mutism, reticence</td>
</tr>
<tr>
<td>deceived</td>
<td>~ false expressions, e.g., language, travesties, enemy images</td>
</tr>
<tr>
<td>too exposed</td>
<td>↑ hyper-forms e.g., hyper-mime</td>
</tr>
</tbody>
</table>

Possible ideologies: exhibitionism, occultism, esotericism.

**Aspect 18: Meanings, Relevance**

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>neglected</td>
<td>↓ Meanings, values, dignity → loss of them</td>
</tr>
<tr>
<td>misinterpreted, despised</td>
<td>~ disorder of self-esteem</td>
</tr>
<tr>
<td>overrated</td>
<td>↑ hyper-forms: e.g., overvalue, delusion</td>
</tr>
</tbody>
</table>

Possible ideologies: elitist way of thinking and acting, society with wrong, or without values. Example: Egalitarianism.

**Aspect 19: Past**

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>infantilized</td>
<td>↓ past → lack of experience, immaturity</td>
</tr>
<tr>
<td>mismarked</td>
<td>~ false memories, false past</td>
</tr>
<tr>
<td>conventionalized</td>
<td>↑ hyper-forms e.g., isolated memories, hypermnesia</td>
</tr>
</tbody>
</table>
The Its can act like ‘sleepers’ that are resting for decades until they become active all of a sudden. Possible ideologies: conservatism, empiricism, traditionalism, also modernism.

Aspect 20: Present, Time

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>put off</td>
<td>↓ Time, calmness → loss of time, of calmness, of peace</td>
</tr>
<tr>
<td>falsely calmed down</td>
<td>~ false dealing/conceiving with time and present</td>
</tr>
<tr>
<td>rushed</td>
<td>↑ hyper-forms: compulsion, harassment</td>
</tr>
</tbody>
</table>

Example: “All of humanity’s problems stem from man’s inability to sit quietly in a room alone ...There is nothing more unbearable for a human being than being in complete calmness, without distractions, business and tasks. Then the person can feel the nothingness, the forlornness, the dependence, the powerlessness, the emptiness.”(Blaise Pascal)  
Possible ideologies: Carpe-Diem-Ideology, modernism, actualism.

Aspect 21: Future

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>unprepared</td>
<td>↓ perspective → hopelessness</td>
</tr>
<tr>
<td>mis-prepared</td>
<td>~ fear of future</td>
</tr>
<tr>
<td>“utopianized”</td>
<td>↑ hyper-forms: Utopia</td>
</tr>
</tbody>
</table>

E.g., self-fulfilling prophecy, progress trap.
Possible ideologies: Utopianism, progressivism /apocalypse, fatalistic ideologies.

Aspect 22: Mistake

<table>
<thead>
<tr>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>uncorrected</td>
<td>↓ correction, compensation → loss of corrections/compensations</td>
</tr>
<tr>
<td>mis-corrected</td>
<td>~ too much or false guilt</td>
</tr>
<tr>
<td>condemned, over-corrected</td>
<td>↑ hyper-forms: over-correctness</td>
</tr>
</tbody>
</table>

Possible ideologies: Perfectionism, aestheticism, also: Laissez-faire-ideologies.

Aspect 23: Protection, Defense

<table>
<thead>
<tr>
<th>It is</th>
<th>P becomes</th>
<th>loss and replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>aggressive, sadistic</td>
<td>unprotected, traumatized, threatened</td>
<td>↓ protection, peace → loss of protection, vulnerability</td>
</tr>
<tr>
<td>falsely protecting</td>
<td>armored</td>
<td>↑ hyper-forms: armoring</td>
</tr>
<tr>
<td>pacifistic, masochistic</td>
<td></td>
<td>~ many defense mechanisms</td>
</tr>
</tbody>
</table>

Possible ideologies: pacifism/militarism.
The disorder/weakness of personal defense is one of the main topics in psycho-analysis.

Due to (almost) all the Its, the defense becomes either
a) weakened or broken off or
b) alienated, displaced, distorted or
c) exaggerated such as an armor/hardening.

Those disorders of defense happen in parts, where P does not experience unconditional love and acceptance. P will feel threatened by any person or situation that questions his/her sA because he/she has identified with this sA. Therefore P would take it personally if anything questions his/her sA.

Further explanations, see in the segment ‘Defense and anticathexis’ later.

---

**Illustration of a Single Second-Rate Personal Part (P²)**

If there is (for example) a person, such as the father, who becomes +absolute for me, then there will be a new It within me, that is made up as follows:

In the center there is the It “father”, symbolized by the Yin-Yang ☯ - split into +sS on top [sS = strange Self] and repressed −sS below, both with their inverse sides. (0 part is not shown). That It has its own territory, that has been created like a new strange system around the center “father”. Therefore, we have a new strange Absolute resp. Self, surrounded by spheres that are subordinated. We have already found that a new Absolute/ Self affects more or less all aspects of its sphere.

Especially the ones that are the closest to “father” will be affected. On the other hand, every other differentiation aspect would also have to resonate. That means that whenever that It is activated it is always about “father” or the father image within me but also about all the other connected aspects. That, on the other hand means: It is also about the past, the present, the future, gender, meanings, information, and so on - eventually about everything that was represented by “father”. To put in other words: All aspects that are dominated by the It will be changed more or less. Especially those aspects that are the most similar to It, will be changed the most.
But there will also be the mentioned repressed –sS: repressed antipathy against the father (because the own Self is being neglected)!

*In my opinion, the yin-yang symbol in the middle represents the characteristics of sS/It very well.

**Which Its Cause What and How?**

- **All Its** do not only change our being but along with that they also change our worldview and the way we experience the world. The person becomes primarily like his/her It/sA and is only secondarily itself. 72 They change P according to the all-or-nothing-principle, black-or-white, pro-or-contra, + or –. We saw that +sA, –sA and 0 are three parts of the same “thing”, the It. In the beginning, it mostly changes the person towards the strange positive. That means that the person feels subjectively very well, identical, strong, competent and so on, without actually being it. At the same time, the person is increasingly frightened and threatened by the contrary –It/sA, without there being a threat that is actually so bad.

- The +Its (resp. the +sA part) may give the person an absolutely positive feeling:
  A feeling of absoluteness, self-awareness, self-assurance, total love, feeling of an actual positive being and life, sense, feeling of power, feeling of I-strength, freedom, wealth, health, eternity, the feeling of an exact orientation, clear differentiation of good and bad, precise knowledge of morals and values, exact differentiation of who is a friend and who is an enemy and so on - all to an extent which is not equal to reality but we would like to live with it. The +Its promise us what we long for in the depth of our soul without actually keeping the promise. They change our personality so that we see everything in their light, act in their name to receive what they promise. But they deceive us and we have to pay a price for that. On the other hand, they do not deceive us totally. That is because they are neither absolutely positive nor absolutely negative but ambivalent.

- The –Its (resp. the –sA parts) threaten us with what we fear the most. Usually, that is the opposite of the +It-promises. They threaten us with death, sickness, powerlessness, loneliness, poverty, withdrawal of love, enemysip - without there being a corresponding reason for it. They present themselves as unbeatable enemies, as a devil, as –A. They also change our personality so that we become frightened, too careful, fearful and so on. Here, we also have to pay a high price, which becomes even higher the more the –It is actually relatively positive. But they help us against the disadvantages of +Its.

- The 0 Its (resp. the 0 parts), that appear to be like an empty face compared to the other two It-parts, negate the personal aspects. Or they create a contrary false All/ everything. But they help us in the form of repression.

(See also ‘All-and-nothing’ and ‘Sacrificial-dynamics’).

72 Otherwise, P becomes to contrary, or to 0. See later too.
We already realized that all Its have three parts and therefore act in many different (contradicting) ways.

- Whenever **contradicting Its** are developed, they confuse us because they are paradoxical, tend to divide and cause double bonds. The person faces very different and contradicting information and signals given by the same It (person, situation). Looking at the arguments of two opposing P² (resp. their Its) from a second-rate perspective (from W²'s point of view), both are right in their arguments. That fact is the reason for many conflicts, such as the ones in marriage. Every marriage counselor can tell stories about how frustrating a discussion can be in that case - especially because both sides are right - but they are only relatively right, since most of the time, the higher, first-rate view is missing: the view, that allows the person to understand the other person's position. |

**Examples** for contradicting It-effects:

- Helpers* cause hyper-help or helplessness or indifference.
- Moralists* cause hyper-morality or immorality or indifference.
- Right-wing extremists* cause more right-wing extremists or left-wing extremists or indifferent people.
- Asceticism* causes more asceticism or gluttony or indifference.
- Altruism* causes/supports new exaggerated altruism or egoism or indifference.
- Self-centeredness* causes/supports new selfishness or altruism or indifference.
- Truth-fanaticism* causes new exaggerated truth-fanaticism or lies or indifference, etc.⁷³

---

**Fig. The main effects of three opposing Its and their parts on the person.**

(Dashed lines represent opposite effects, solid lines represent equal effects.). P is a cue ball of various It effects. The Its are each other’s enemies or friends but they stick together against P and ultimately exploit P. Method: carrot and stick.

The −sA (right), for example, makes P much afraid and drives P into the arms of his opponent, the + sA (left). This appears as a savior because it is the opposite of the −sA. P jumps out of the frying pan into the fire and must bleed everywhere.

For more remarks, see: 'The opposites in the realities' and 'It-parts, opposites...').

---

⁷³ The * is to reiterate that it is absolutized.
**Strange-I (Ego)**

Synonyms of strange I: Ego, second-rate I, I².

The explication refers to the strange-I, as well as the strange you (you²) and strange we². In the following paragraphs, I want to discuss the emergence of I² under the influence of It/sA briefly.

The effects of the It/sA on the I are the same as the ones on the person (as discussed above). If you transfer the main effects given onto the 'I', the following picture will be created: P causes a misabsolutization or adopts one from the outside (mostly unknowingly). With that, something becomes all or nothing, pro or contra, positive or negative in the absolute understanding. These parts create a strange I (Ego) but also a contra-strange-I (Anti-Ego) and a non-I. This process, which at first only took place on the mental-spiritual plane, is then "materialized", that is, to something material as an It. Now, the I is dominated by the It and therefore the I becomes more like the It - while the It becomes like the I.

As I said, this process is usually not conscious since strange Absolutes resp. strange Selves have usually already established in childhood or, as I believe, even prenatal - and we are identified with them and they dominate and change us and generate strange Ego-spheres in us.

Fortunately, those changes are only partial, which is an important fact for therapy. As mentioned multiple times before, it is also important to know that the strange Selves and their Egos are not solely negative but that they also have positive parts. They are more or less ambivalent, paradoxical and illogical. They are the main components of various mental disorders.
The Structure of the Strange-I (Ego)

Notes:

Here more about the used → Classification.
For a change, I use ‘Ego’ or I² for the strange I.
(I² means second-rate).

- Hyper-Ego = Ego, dominated by pro,+ sA.
- Anti-Ego = Ego, dominated by contra, − sA.
- Non-Ego (Non-I) = Ego, dominated by nothingness.

‘Ego’ means strange-I (I²). ‘Ego’ does not indicate an egoistic person but a person whose I is controlled by an It/sA and therefore lives in an unfavorable situation - especially under the pressure of being in charge of everything and not being able to rest. That I² is constantly switching positions between the three parts of the It (, −, 0), what I also call ‘imprisoned in the psychical Bermuda Triangle’.
However, it has only a relative role for the first-rate I-self.

Summary of the Personal Changes

With the establishment of strange Selves resp. Its, something becomes too absolute (absolutistic) and the person becomes relative or even irrelevant; something becomes too unconditional and the person only conditional; something becomes too primary, too important and the person too secondary, too unimportant; something becomes too independent and the person becomes dependent; something becomes the center and the person becomes a minor role; something becomes a subject and the person its object; something controls the person and the person does not control something anymore; something becomes too real and the person is no longer real; something strange becomes personal and what is actually personal becomes material, less personal, dehumanized, dividable; something lifeless becomes alive and the affected person becomes lifeless, an object is humanized and the person becomes an object.

---

74 Hyper-ego has a different meaning here than Freud’s Super-ego.
One can also formulate: This is a “victory of the Relative over the Absolute”, a “victory of matter over spirit”, “victory of objects over subjects”, “victory of things over the person”, “victory of the strange over the Self”, “victory of the splitting over the unity”, “victory of dependence over independence”, “victory of It over I”. (Fortunately, the “victories” are only partially and temporary.)

Attentive readers have probably already realized that some of the mentioned changes represent basic patterns of mental disorders. Specially: The priority of the human towards the objects is lost. That means: many people did not grow up as subjects, as unique individuals but as objects that have to fulfill specific assignments and roles. Fortunately, the reversal of person and It is only relatively, even if the person experiences it as absolutely. 

Concretely that indicates that the person never turns fully into the It, never becomes an object or a function (of the It) entirely. Vice versa, the internalized strange Absolute (resp. It) never fully becomes the person, subject nor comes truly alive. There will always be 'healthy parts' remaining within us that are too strong, even if we are very ill or manipulated. It is a philosophical or religious question, why it is that way. We will come back to that question at a later point.

The Juxtaposition of Different Realities

It is normal for our world that there are many, very different and contradicting realities. That also applies to the person and the psyche, although we usually expect that there is only one will, one mindset, one feeling (and so on) for a certain person regarding a certain topic. That juxtaposition of various, very different realities, has always awaked great interest of humanity.

- As an example, the doctrine of the two kingdoms by Luther.
- Kierkegaard posited the human being to be a synthesis of opposing elements, of “the infinite and the finite, and the temporal and eternal, of freedom and necessity”.
- Boris Pasternak: “Everything that happens takes place, not only on earth, in which the dead are buried but somewhere else, that some call the Kingdom of God, others history, and still others something else again.”

As stated several times, I distinguish a first-rate and many second-rate realities. Typical of the second-rate realities is the juxtaposition of opposites, which are experienced as incompatible. Overall, WPI does not consist of purely first-rate or purely second-rate
realities but a mixture of both. Both forms of reality are relatively opposite. (There is only an absolute opposite between +A and –A).

Therefore it is normal that a person experiences him-/herself and the existent reality as relatively strange.  

It would not be normal if a person experiences reality only as one actual reality because our world, as well as people, are also ‘built’ in strange structures.

In this sense, there are double-worlds resp. plural-worlds.

This applies to both personal and nonpersonal realities/worlds: e.g. Two (or several) different beings, two kinds of life, two happiness, two misfortunes, two different contexts, etc., which, as said, are not completely separated. Unambiguous are only +A and –A, although that is not provable. Everything else is relatively exact-inexact; only describable relatively, relationally or comparatively.

(About the juxtaposition of opposite sA/It and their dynamic see Double-Bind Theory.)

Comparison of First-Rate Reality (W¹) and Second-Rate Realities (W²)

Note: The following characterization of the second-rate realities is ideal-typical, for these W² are always permeated by more or less 1st reality.

An overview of the nature of second-rate realities can be found in the `Summary table´ in column N.

For simplicity, I write sometimes instead of first-rate only first or ¹, and instead of second-rate only second or ².

There are only the most important aspects presented in the following listing:

There are only the most important aspects presented in the following listing:

• The second-rate realities are strange, non-actual and more unrealistic than W¹. W¹ is the realistic, actual reality. The first positive world can also be called heaven and the first negative world hell.

• The second-rate worlds are intermediate worlds. They touch heaven on the one side and on the other side they touch hell.

• W² is complicated, divided and also too homogeneous.

W¹ is more an infinitely varied whole.

• The second-rate worlds have three divided main dimensions: +*, −* and 0* resp. pro*, contra* and zero*.

The +first world only has one determined main dimension, the +A¹.

• The R-parts in W² have to function. Otherwise, they will be replaced immediately.

The first world is undivided and integrates its relative-sphere, which is also undivided but

80 W. Blankenburg called the 'loss of natural self-evidentness' as a sign of schizophrenia (1971), but that affects us all since we have lost the paradise and not just 'schizophrenics'. As a sign of schizophrenia, one should only ascertain a predominant loss of natural self-evidentness (corresponding to a predominant loss of the first-rate Self in the sense of this work).

81 W is here also for WPI altogether. W steht hier auch für WPI insgesamt.
varied. $R$ will not be replaced if it does not work. It is integrated and protected in a bigger wholeness.

- In $W^2$, everything has multiple meanings, is multicausal and so on. Only the first reality is definite, unambiguous and unicausal in the end.
- In $W^2$ dependence reigns while $W^1$ is determined by freedom.
- The It/sA of the second realities act mainly disturbingly and negatively. The +A of the first reality can be experienced as negatively now and then but always follows a positive goal.
- The second realities, are each other’s enemies or false friends or do not care. In the first reality, the elements are friendly with each other although they can be critical.
- In the second realities, the things and functionalities dominate. The first reality is dominated by a lively and voluntary spirit, also called the Holy Spirit.
- In the second realities, there is much fear, jealousy and competition. They can be compared to armies, where orders are made that have to be followed or else there will be punishment.

In the first reality love dominates. There are no commands but orientation. It is not made up in a strict nor in a hierarchic way.

- The second realities mostly work like machines. Laws and rules are common, comparable to the ones in physics/mechanics (or there is chaos).
- The priority of the first reality is freedom, personality and creativity.
- The second realities are opposed to the first and cannot integrate it.

The first reality can integrate the second realities and tries to correct them without fighting them. The divine permeates all worldly things (except the –A), without being identical with it. E.g. Jesus has gone to the last corner of the world ($W^2$), without being equal to it.

- $W^2$ needs “food” and supplies because their sA are hungry. The sA, as centers of $WPI^2$ always want to have/receive. They are pseudo-autonomous but also hyper-dependent.
- $W^1$ is satiated.

- $W^2$ has reversed sides. $W^1$ has no reversed sides.
- One symbol of the second worlds is the ellipse to indicate the unroundness. The yin-yang symbol $\bigcirc$ indicates a yet balanced center of second-rate realities.

The first world can be symbolized with a circle or a sphere. There are fluent lines and every point on the sphere is a center. There is no front and no back.

- The dynamics in $W^2$ are determined by strange Absolutes (sA). Those Absolutes tend to create short-term highs in the beginning, followed by long-term lows.

The dynamics in $W^1$ are determined by +A. On transition to $W^1$, there is often a short down in the beginning, which usually cause some resistance, followed by a stable positive phase.

- In $W^2$ there are only a few nuances, small ranges. Everything is determined by the all-or-nothing-principle.

In $W^1$, there is a coexistence of the relative-parts. There are a large number of nuances. $W^1$ integrates all relative-parts, also the sA.
About Terms and Language of Second-Rate Worlds

Atheistic worldviews mainly describe second-rate worlds. For example: Freud, Marx, Darwin, Buddhism, partly even humanistic ideologies. They describe the world mainly as materialistic, mechanical, dialectic, or dualistic and deterministic. The focus is on the relativistic or the absolutistic. They no longer see the transcendence, the mysterious, the wonderful, the creative, the immeasurable, the spiritual because it is not to catch directly and is not provable. Max Weber called it the “demystification of the modern world”.

Examples:Psychoanalysis understands the characteristics of a person only as the existence of second-rate realities, or second-rate personal aspects. The three main instances of Freud (Ego, Super-Ego and Id) are instances of an alienated or ill person. They are defined accordingly. S. Freud uses typically many mechanical terms such as the "psychic apparatus" and the human being as an "object". Further authors, who use the "language of the second-rate realities" are - as mentioned - Marx (“The human being is a product of the social circumstances”) and other materialists or behavior therapists, that view the person mainly under the aspect of the stimulus-response-model.

Language and terms of the first-rate reality are adequate and clear. However, as I said, our world is not only made out of the first-rate reality and is therefore not definitely definable.

How Do I Recognize Second-Rate Realities?

Usually, second-rate realities can be recognized by absolute obligations (‘musts’), which gives us humans a temporary feeling of orientation and safety but overstraining in the long run. These obligations are usually caused by sA, that control and force us. Are not most of the tragedies based on the feeling of such obligations, the feeling that we definitely have to do a certain thing which leads us into radicalization, absolutization and greed? It can also be compared to a kind of blackmailing, as in: “You have to do that, otherwise I will take your +sA and replace it with a −sA.” Relative problems are then taken personally. Especially in conflicts or war, everything becomes extreme which makes the sA visible.

There is a certain point where it is always about all-or-nothing, pro or contra. At that point,
desertion is hardly possible for the person. The person does not have much of a choice anymore. The situation of a mentally ill person is similar.

"Advantages" of Second-Rate Realities due to Strange Selves
- The strange Self (sS) can replace the Self in a certain kind and we seem to have direct access to that.
- A strange Self can cause +hyper-effects, even if one must pay a very high price for that.
- A strange Self promises an absolute power of control over the world, other people and the Absolute.
- With a strange Self, the disadvantages of another strange Self can be balanced.

“Disadvantages” of the First-Rate Reality due to the Actual Self
In contrast to the advantages of the strange-Selves, the “disadvantages” of the actual Self are listed here:
Although the first-rate reality includes a +Self without any cost, it also means that:
- The Self cannot be increased any further, otherwise, it becomes an inflated strange Self.
- Besides the possibility of actively choosing such Self, one does not have any other kind of control over the Self because it controls itself. The sS appears to be controllable even though it is really not.
- The unconditional right of self-determination which is part of the Self also includes self-responsibility. We like the first, the second is reluctant.
- All people have this actual Self if they choose it. That means that no person has the right to higher themselves over another person.
- The Self is part of transcendence, God and final subjects such as death. We like to repress that.
- We must also say farewell to the idea that good deeds would have necessarily good consequences and bad deeds necessarily bad effects.

Inverted, Paradoxical World
All of us, healthy or ill, live in inverted inner and outer worlds full of paradoxes.
The wife of the Russian author Lew Tolstoi writes in her diary on 10/25/1886:
“It sounds strange but the last two months, when Lev Nikolaevich was ill, were the last happy time for me. I was fortunate to be able to nurture him day and night had a task whose meaning could not be doubted, the only one that I am capable of sacrificing myself for the loved one. I was all the happier the more burdensome I felt.” But that kind of luck could only be temporary and finally made room for depression and hate. The more Tolstoi’s wife sacrificed herself for him, the more she had to hate him because through that kind of love she bled dry. That hate-love accompanied her for her entire life. When he was ill she could be happy for two reasons: First because she could fulfill her ideal of self-sacrifice. Second, because her aggressive feelings towards him were satisfied by his illness. Such as Goethe, Hölderlin also complained, how hard it is to bear luck.
Apostle Paul writes that he has badly acted even though he did not want to.
L. Völker published a book entitled “Come, holy melancholy” with poems by various poets
that describe the advantages of sadness and depression. The contradiction of preferring the negative to the positive appears in many different
variations. They range from everyday paradoxes and contradictions to severe self-torture
and self-destruction that still seem positive. They always appear mysterious and shocking,
fascinating and terrible at the same time. Although we promised to do better next time, we
repeat our wrong behavior because of these strange inner powers.

How does it happen that we prefer the negative over the positive?
Why do we destroy something we love, or love something although we hate it?
Why do we sometimes do the opposite of what we want to do?
How can there be opposite feelings at the same time?
Why do some people love others that are exploitative and humiliating?
Why does a woman marry a drinker again, even though the first marriage was a martyrium?
Why do we seek problems instead of being happy that there are presently no problems?
Why do we even seek the sorrow and fear the luck?
How come that people want to be sick than healthy, better dead than alive, dependent than
independent?
How do we understand that people feel pleasure when they are beaten?
Why are there people that hold on to a craze that is obviously absurd?
Hundreds of such questions could be asked. In the depth, they question all our Self resp. our
absolutenesses and can only be answered there.

A short answer: If the +A or the Self has a priority over the Relative, then there are no such
contradictions.
Only relative contradictions can exist which are resolved in the larger context of +A/Self.
However, when the Relative replaces the Absolute or the Self, reverse and more or less
paradoxical world is created. Positive things like health become negative and negative ones
like illness become positive and so on.

**The Same in Different Second-Rate Systems (WPI²)**

One finds the same phenomena in second-rate general and second-rate personal spheres (P²).
Here and there we find similarities: external and internal oppression, coercion, persecution,
external and internal imprisonment, here dictatorship and there depression etc.
The difference is that P² is his own offender and victim at the same time. Commanding
voices and all other totalitarian characteristics can be found both in the person concerned
and in a particular outside world. Many patients adapted such totalitarian instances from
their environment.

---

There is also a parallel between the thoughts of a mentally ill person and the language of a totalitarian system, as e.g., Víctor Klemperer described in his book "LTI".

**DYNAMICS OF STRANGE REALITIES**

**General Dynamics**

**Principles:**

- The first and the strange, second-rate realities (WPI¹ / WPI²) have very different dynamics.³³
- The dynamics of WPI¹ or WPI² are determined by their Absolutes.
- The structures and dynamics of the first-rate WPI are clear and uniquely.
- The structures and dynamics of WPI² are ambiguous. WPI² has two main dynamics and two main results: all² or nothing². If we differentiate all² again, we will have three main dynamics with three main results (all) pro² / (all) contra³ and 0³.
- So, in the second-rate dynamics, we can find 1. strengthening (amplification), 2. opposite, contradicting dynamics (similar Newton’s third law: action = reaction) and 3. “0 dynamics” (standstill).
- Pro-, Contra-, and 0 dynamics can change abruptly turn to the opposite (→ Reversal into the opposite) or "mix" (Similar "drive mix" by S. Freud).
- One finds these dynamics in both social and individual processes. The paradoxical character of the Its makes it possible that multiple systems sometimes facing each other as enemies, sometimes act with each other and in a third case, annul each other.

**Autonomous Phases of the It**

It/sA³⁴ are (partly) autopoietic systems and have their own lives (such as parasites). They tend to decay. Alone they have only a temporary existence. They need a constant supply of the host to keep alive.

Its/sA are based on the principle of all-or-nothing. If they cannot be the all, they will not work. At first, they try to be all the best for the host (system, human), to seduce them to live from them. That only lasts as long as the host plays along. But the host (usually us humans) believes not to be able to survive without the Its/sA - since they are of top priority for him. But in reality¹, the Its/sA are more dependent on the host/ the human than the human on the It/sA.

---

³³ Hints:
1. I use the terms 'strange' and 'second-rate' (²) synonymously.
2. Where it is clear that it is a second-rate issue, I leave away the label "²" frequently for the sake of simplicity.
³⁴ sA and It I use synonymously here. I repeat: It consists of three opposing sA (+ sA, −sA and 0).
I write ‘sA/ It’ if I want to emphasize the strange character of the Absolute and ‘It/sA’ if it does not matter.
If the hosting system does not “feed” an It/sA anymore, or frees itself from the It/sA, the It/sA is unfortunately not automatically dead. Since its survival is the priority, every It/sA sacrifices its own Relatives, its own “people”, ruthlessly like a dictator. The own “people” even sacrifice themselves for the It/sA since it is their Absolute. Those mechanisms may appear within a society or within an individual. More details can be found in: `Symbiosis and parasitism between It and P²`.

**Interactions in W²**

Note: W² stands for second-rate world resp. reality.

**General Principles**

- Like the second-rate dynamics in general, the interactions in W² are also determined by their respective Absolutes (sA/It).
- The +A is always effective in the W², even if it does not dominate. +A and its +R¹ are related to the sA/It in relative opposition, so that, as in W² themselves, this also creates a latent long-term conflict (with continuous stress). Therefore it can come at any time to a "revolt" of the Relatives against their oppressive Absolutes.
  Examples: a rebellion of the oppressed against their oppressors (e.g. revolutions), a rebellion of the masses against elites, a rebellion of the truth against the lies, etc. (psychologically as well as socially).
- Different sA or Its and their systems have the same, or opposite, or 0 direction of impact and may strengthen, fight or annul each other.
- Larger complexes arise whenever two or many Its are connected. They usually occur as pacts, enmites or indifferent complexes. They are rigid but may turn into the opposite quickly. (→ Reversal into the opposite)
- The interaction of the It/sA and the maintenance of their balance always requires sacrifices.

**Short Overview of Possible Interactions in W²**

Similar to the interaction possibilities between different It (→ It-parts as opposites, fusions and negations) all possible interactions between 2 W² resp. different systems³ are shown in the following graphic.

(Here I only give an overview, which I discuss in more detail regarding personal interactions in the section 'Complex personal dynamics and relationship disorders' as well as in the unabridged version.)
The figure shows the interaction-possibilities between two W² units. Each of the W² has 3 parts with 3 sides, here represented by 3 triangles with 3 different connotations. (→ 'It as nine-sided triad').

On the left, there are two opposing W², the valences of which are interlocked like gears and on the right two W², whose valences are commutated.

In both cases, the two W² can form a pact, or opposites or annulments will arise as soon as the connotation of a part changes.

W² can be anything psychical relevant, determined by an It. These can be certain 'worlds', persons, I (WPI), or parts of them.

As said, I will discuss the personal interactions later. I believe, however, that the interactions in larger systems follow the same principles.

Example: Within certain societies, certain ideologies will complement and strengthen each other, or they may be in opposition to each other. This creates both pacts / alliances as well as hostilities / conflicts or both side by side in equilibrium, depending on how the corresponding parts are connoted. They are rigid and unstable at the same time, and can always form new constellations at any time, or even turn into their opposite.

Example: Interplay of opposing sA as ideologies

Based on this symbolic picture (Fig. 43), imagine how different ideologies can interfere with each other. If, for example, the disadvantages of an ideological trend (in this case of an absolutistic ideology) become ever greater then they cause automatically a counter-direction, which than determines the zeitgeist and a society. (See also 'Reversal into the opposite'.)

---

85 'Absolutisms' functions here as a collective concept for ideologies that have absolutized an attitude.
Philosophical/ ideological trends alternate. Often, the opposite occurs. Deficits of old views become more and more clear and are offset by opposing ones or replaced by co-forms. (Ideology * → co- or counter-ideologies).

Absolutisms are followed by relativistic and / or nihilistic trends and if these had been exhausted, they are replaced again by new opposing currents.

Concrete example: Zarism → nihilism and anarchy → collectivism → new autocracy.

Since all ideologies and philosophies have deficits, the game is endless. That is why whole societies are perishing like individuals.

**Emergence of Complexes by Different Its and Their Systems**

In this publication, I distinguish:
- One It = simplest complex.
- Double or multiple complexes consisting of two or more Its.
- Hypercomplexes networks consisting of many Its.

To location:
- Complexes within a person.
- Interpersonal complexes = “relationship-complexes” (→ 'Relationship disorders').
- Social complexes.

I think that the structures of the different complexes are similar, despite very different contents. That means that individual or interpersonal (familiar, social) complexes are similar. C. G. Jung understood 'complex' much like me as a “Group of largely repressed ideas, which are connected as a cohesive whole and influence the thinking, feeling and action of the individual by eliminating a conscious control.”

Based on the idea of this publication, one can say: All Its can create such complexes with each other. They then lead to by C. G. Jung described and other consequences.

Whenever personal (or other) Its and their systems react with each other, the following complexes can be created:
- complex pacts (Syn.: symbioses, collusions, mergers, fusions) - with connections (bonds) that are too tight,
- complex opponents (Syn.: enmities, collisions) - with splittings (divisions),
- neutral complexes (Syn.: 0-complexes or liquidations) - with dissolution or repression of connections/ bonds,
- mixed complexes.

**Other Similar Complexes**

---

86 In psychiatric terminology, a complex is often stated as consisting of 2 opposites, e.g. Father Son C. or whores-saint-C. etc.

87 Peters, Lexikon Psychiatrie..., see bibliographical references.
In the unabridged German version you can find more details about the complexes of other specialties because there are further similarities with psychical complexes: e.g., with chemical complexes, chaos theory, analogies in physics.

**Characteristics of Psychical Relevant (pr) Complexes**

The pr complexes either show a stiff hierarchic structure, or they appear chaotic. Here examples for pacts:

- Pacts as chains. Horizontal with an opposite; Vertical with Co-form.
- Pacts as chains and conglomeratic with opposites and Co-forms.
- Pacts as chains of 0² forms.

Its, or complexes, that are organized as pacts (have vectors with the same direction) stick together such as chains, which also explains certain chain-reactions and domino-effects in the second-rate realities.

**Notes about the Transference**

Transferences occur through the It/sA. Transference may occur from any pr unit to another pr unit.

Example: Transference from $W²$ to $P²$, from $P²$ to another $P²$, or in $P$.

Such as in psychoanalysis it can be differentiated between positive and negative transference.

Relative transferences (= influences) have to be viewed separately.

Two illustrations that show different aspects of transference.
This graphic illustrates a central It (black) within a complex that determines other Its as long as their parts interact with each other. (right side)
However, small displacements may cause a collision (left side, arrow).

**Summary**

We can find regarding the complexes:

- Self-organization/ autopoiesis.
- Processes: From order to chaos and from chaos to order.
- Relativization of the principle of causality: “Equal causes cause equal effects.”
- Low or fixed predictability.
- Interior and exterior interactions.
- A complex is never completely satisfied. There is always a tendency to expand at the expense of others, or it is "gorged" by others.
- Complex-phases are just like It-phases.

**Personal Dynamics**

**Simple Personal Dynamics**

**Introduction**

This chapter is based on knowledge of the previous sections. However, I will try to repeat the most important matters. This is now about the personal dynamics of second-rate parts of persons which I labeled with $P^2$ or only with $P$ here.  

The It became part of the person, although it is something strange for the person at the same time. That makes it hard to understand the dynamics. The person can identify him-/herself with the It and function as his/her It as well as be an opponent of the It as something strange. To be exact, $P^2$ does both: $P^2$ is always more or less identified with the It

---

**Note:** More exactly: The first-rate $P$ I label with $P^1$, the second-rate often only with $P$ or $P^2$ if the connotation is important.
or faces it as an opponent. P² never has a definite identity. P² can never find peace in
him/herself because the It or the complex that determines P² does not rest either. The It is
unstable. It has to make sure that the interior powers are controlled and also guarantee that
it steadily gains new input (“food”) from the outside to stay alive.

**Comparison of First- and Second-Rate Personal Dynamics**

- General characteristics of the P²-dynamics: They are more inadequate, heteronomous,
“shifted”, disordered, unconscious, passive, functional, automatic, artificial, contradicting
and paradoxical compared with the first-rate dynamics.
- Their directions are: too pro, too contra or too 0. (See ‘Summary table’ column Q).
- Instead of free life, P is now dominated by strange processes. As long as the person is
dominated by the It,
  - P has to do whatever It determines. P has to act, think, realize, function the way It wants
to. Although P still has some choice, P cannot destroy the It immediately by an act of will
because It has been materialized.
- The “primary processes” (Freud) are similar to the second-rate dynamics.
- The first-rate dynamics are clear and unambiguously.
- No person shows solely first-rate behavior because no person can behave absolutely
definite and unambiguously. There are always P²-parts which also affect the behavior.

**P between +A and sA**

P stands between the advantages and disadvantages of the +A and the +sA.

Short to advantages of +sA: Emergence of + hyper-forms. (E.g., see ‘Summary table’ column N, line ↑)

Disadvantages see the last section. → P reacts with P reacts with Defense mechanisms.

Advantages of +A: + ‘Meta-help’ (redemption, salvation, etc.).

Disadvantage: no + hyperforms, withdrawal → P reacts with Resistance.

Therapeutically important: The +A does not leave P alone when disturbed by the sA.

F. Hölderlin: “But where the danger is, also grows the saving power.”

**Self-/Others Damaging Dynamics**

Second-rate personal dynamics become damaging (self or others) in the long run.

P² dynamics to the outside harm especially other people, P² dynamics in the person harm
especially the person himself.

Interaction with the It will be even more expensive for P, the more strange and dissimilar the
strange Absolute is compared to the actual Absolute that is being replaced.

**Symbiosis and Parasitism between It and P²**

In the beginning, there is a symbiosis between +It and P. Both sides give and take.

Metaphorically, you can say: The Ps give their blood to the Its and in return, the +Its give P
drugs and safety² against –sA, which were created by themselves. Both need each other. In
reality, the Its depend on P; P however only depends on the It/sA mainly in a subjective way.
(That fact is important for therapy). They are both connected with some sort of hate-love. They “love” each other with “libido”, as long as they give each other whatever the other one needs. P² needs It as compensatory-Absolute because P² does not live from the actual Absolute. At the same time, the It needs P² as host. Enmity and hate appear, whenever one (or both) of them do not fulfill their symbiotic role anymore. The It will put P under pressure and tyrannize P when P does not function the way It expects, especially if P tries to become the master of the own house again. That is a typical situation for P to become ill. However, if P is able to free him-/herself from the It(s), the It dies, while P survives. On the other hand, P is subjectively so dependent on the Its that he/she often prefers to die him/herself instead of letting die the Its, since the Its became his/her new Absolutes. Then suicide is the last logical consequence of this situation.

The interactions of It/sA and persons show noticeable parallels with symbiosis and parasitism. Almost every characteristic of a parasite also applies to the It. (More in the abridged German version).

The following topics are discussed below:
1. P²-dynamics in identification with an It, or an It-part.
2. P²-dynamics towards an It or an It-part.
3. P²-dynamics, that show P² in a victim role.

Hints: I have listed, point 1 and 2 corresponding ‘secondary reactions’ in column ‘P’ in the ‘Summary table’. ‘The victim dynamics’ are listed in column O. All types of dynamics overlap!

**Personal Dynamic like It**

**Generally**

The graphic is meant to illustrate the direction of the dynamics:
They come from the It-core of a person (or one of its parts) and go into the relative-sphere, or outside (left arrow), in an efferent way.

This section is about dynamics that come from the absolute-sphere of the It, the core-It. That is especially the case in the very beginning. In this case, P is identified with the core-It and acts in its order. Here, P acts as It because P also became It, and the It is personalized and individualized.
To be exact, P does not act as the It itself but as its functionary, participant and representative. Therefore P could be described as “sobject”, or second-rate subject. P is like subject² and object at the same time. As mentioned before, P in this role is first and
foremost a perpetrator but always a victim of the dominant Its, too. Whenever P lives in the name of the It, then especially by the motto: all or nothing, black or white, top or bottom, win or loss, this or that, enemy or friend, hate or love and so on. Common mottos are: "Whoever is not with me is against me." Instead of the connecting "and" dominates the "or". P is captured within the It and is only able to see the world from its specific point of view. We now live the life of the It: We only see what It sees. We act the way It wants us to. We only feel what It feels. We love and we hate what It loves and hates and so on. I² do what It tells me to do. I do what my inner “dictator” says. In the worst case, I sacrifice my life to It because the main goal of my life is the It, the parasite. It gives me what I believe is necessary for me. Only It lets me be I. Without It I do not exist. +It lets me be alive, –It kills me. Only +It gives me worth. I am abandoned from the It as soon as I stop bowing down to It. That can show in almost all dynamics (processes, behaviors etc.), even if they are contradictory. That is important for understanding behavioral disorders and paradoxical behaviors. That also means: P can primarily want something positive but does the opposite. Or P wants all but achieves nothing. As mentioned before, the It and therefore P too, also tries to expand to the outside. With that, P is also able to dominate other people through the It. Whatever It does to me, I do to others. I demand from other people to do what I think is right to do. People with other beliefs are being excluded or fought. P experiences doubt of his/her way of thinking or acting as questioning or attacking of the own person. Factual issues are taken personally. It has to be that way because P identified itself with the It and whenever the It is being attacked, it has to be experienced as an attack on the own person.

P as It-part

![Diagram](image)

The illustration shows from which It-parts P acts when P has identified him-/herself with the It. The inverse sides in the gray font are latent but can be activated at any time.

Pro-sA/+  

P² is identical to pro/+sA. I am +* (pro-sA and +sA are used synonymously). All pro/+sA determined actions are more or less variations of: P loves (absolutizes) something, him/herself or other people too much and hates (–absolutized) their opposites too much. If the person loves or absolutizes mainly him-/herself, that equals selfish, narcissistic or when P is fully identified with pro/+sA he/she shows possibly manic behavior. However, I dare not lose the It because that would also mean the loss of my identity, of my Self. So, I always have to feed It. In the background, the opposite, the contra-sA, is constantly waiting. I have to fight its realization to assure the +*. Due to the exertion of force that is
needed permanently to keep up what we love, we also start to hate it. We have to hate it because we bleed dry because of the +sA. At the same time, we enjoy bleeding dry for it because the It became our Absolute that we believe to need.

P overstrains him/herself in this specific role. P does not see his/her limits because he/she is doped with inner endorphins. P is manipulable and vulnerable at this point.

A special role is being played by the behavior of P on the positive sides of the contra-sA or the 0. When keeping up the pro-sA became too expensive, the positive sides of the contra-sA become stronger. These contra sides cause P to show (often suddenly) antagonistic, hostile behavior towards the pro-sA or its representatives (e.g., towards other P). Therefore, in every absolutization an ambivalent behavior is possible.

**Contra-sA/–**

P² is identified with contra / –sA. I am –*. (The terms contra-sA, –sA and –* are used synonymously).

The –sA are our false devils/enemies/evil with whom we have identified ourselves.

The behaviors of a P, determined by –sA, are variations of: P hates him/herself or others too much and loves their opposites too much - since they are both sides of the same coin, the It.

Self-(or other) punishment and -aggrandizement may stay balanced or alternate.

0

The behavior of P, whenever P is identified with 0, is comparable to the behavior of a nihilist or a person that suppresses the most important aspects of life. The main characteristics are:

I ignore, liquidate, neglect, sacrifice something, somebody or even myself.

Example: “I am the spirit of perpetual negation.” (Mephistopheles).

There are often so-called displacement activities or similar behaviors. The behavior of this P is often the opposite of the behavior that is determined by the all - in sense of all-or-nothing behavior. See also ‘Negation (all or nothing)’.

**Ambivalent, Paradoxical Behavior**

P will act in an ambivalent, contradicting way if two opposite powers are of equal strength. So if all and nothing, or pro-sA and contra-sA have the same power within P. Example: P loves and hates at the same time. The opposite powers are often balanced or take turns. P will paradoxically act if his/her +sA is connoted negatively or his/her –sA is connoted positively.

**Equal and Opposite Behavior by pro-/contra-/0 sA**

Persons who have the same sA can show the same but even contrary behavior.

Persons who are determined by an opposite sA, can show contrary but even the same behavior.

Example: One can have the obsessive thought of killing someone due to the enormous hate
one has for that person. However, someone (like one of my patients) may have the same obsessive thought due to too much love. (The woman of my patient was his +Absolute, and he developed the obsession he may kill her for fear because he may lose her thereby - the meaning of his life).

Although maintaining these opposing positions requires much energy, P often benefits from living from both pro-sA and contra-sA positions. This allows P to maintain (an expensive) balance. P can compensate for the disadvantages of a sA with the opposite behavior. The person can use this "pendulum strategy" as a defense and thus become invulnerable.

**Systematic (Optional Remarks)**

Here only keywords because the role of P towards the It, which I discuss later, is much more important in terms of the emergence of mental illness.

(For more details, see `Summary table` column P and Q).

**P² with Misdimensioned Efferent Dynamics**

**a1**: In this aspect, P mainly acts out of an absolutistic, or relativistic, or nihilistic position.

**a2**: P acts out of a hyper-identified or alienated position.

**a3**: P acts out of a hyper-realistic, or wrong, or hyper-realistic position.

Example for criticism on such a hyper-realism:

“The words of humans fill me with fear.
They name all the things with articulate sound:
[...] It's the singing of things I'm longing to hear.
You touch them and stiff and silent they turn.
You're killing the things for whose singing I yearn.” (Rainer Maria Rilke)

Some P² in this position express everything in the indicative. They do not seem to know the subjunctive. Others however, do not seem to feel the desire to express themselves clearly.

**a4**: In this aspect, P acts out of a one-sided, monistic or dualistic position.

P isolates, merges, divides him/herself or something or other people.

**a5**: In this aspect, P mainly acts out of a deterministic and dogmatic or unreliable and libertinistic position. P makes him/herself, something or another person too insecure, wants to let go too much or, on the other side, fixates too much, misprograms or determines.

**a6**: In this aspect, P acts out of a dictating, radical position.

P will equalize or radicalize; exaggerate or understate.

**a7**: In this aspect, P acts out of an automatic, autocratic, tyrannical or servile position.

P will (him/herself or else) subordinate, overadapt or become too independent.

**P² Efferent Dynamics Concerning the IV Main Differentiations**

**Being:**

With the identification of the specific It, P acts like a thing (or on the other side, like a ghost) because P is being materialized and depersonalized.
Life:
With the identification of the specific It, P mainly acts as a functionary, like a machine or a robot.
Or in the opposite: hyper-alive.

Qualities:
P acts out of a perfectionistic or negativistic or positivistic position.
The life, the actions of P become too negative, too imperfect or too positive or generally too faulty and disordered.

Connections (subject-, object-roles):
P acts out of a subjectivistic or objectivistic (functionalistic) or instrumentalistic position.
P mainly acts like an object (or an absolutistic subject).
Concerning connections: P creates connections where there are none or negates existing connections.

P dynamics as a Strange Unit
P-dynamics as strange all-or-nothing:
P takes a totalitarian or negating position, depending on the It that identified him-/herself with. “All or nothing” says the It, and P acts by that principle. P totalizes or negates (or isolates). This all-or-nothing behavior can also be found in everyday life. Such as living the motto: “I either do the whole thing or nothing at all.”, or “If I cannot perfectly complete this, I will not do anything at all anymore.”, “You are either here for me completely, or you can leave.”

P as “God” or “devil”:
P demonizes or idolizes or profanes him/herself or others out of this position.
P may act as his/her own God or his/her own devil.

P as “thing” or “hyper-person”:
Depending on the It, P may feel and act like a thing (depersonalized), or oppositely (like a hyper-person).
Or P treats others that way.

P as “hyper-I” or another person:
P feels and acts like a person that is imprisoned within him/herself or only focused on him/herself in egocentricity
(→ The I as a strange Absolute) - or acts and feels like another person (“heterocentricity”).

P-dynamics are too physical/ too spirituous/ too mental:
Depending on what part of P (body, soul, mind) is identified with an It, the affected person
will differently feel. Here are also contrastive pairs. (Example: “Head” and “stomach”) Such as in the other aspects, nuances of behavior are missing. The behavior is too determined by body or soul.

**Additional Differentiations (Examples)**

I constrain here just on a few examples because the role of P as a victim of the Its in relation to the pathogenesis is more important. But as said: All types of dynamics overlap!

In keywords, I have listed all aspects of differentiation and their personal dynamics in the [Summary table](#).

Aspect 8: Volition
We want whatever the It wants and not what we really want ourselves.

Aspect 11: Necessities
P is acting out of an It that represents absolutized necessities. P will start to believe that something, that is really not an absolute necessity, is definitely necessary and has to be made. Since P as It is mainly in the role of an offender, P will mainly demand other people to fulfill the requirements. They are usually dogmatic, bureaucratic or technocratic people on the one side, and on the opposite side, there are people that tend to anarchy. According to the contrast-pair-dynamics, there is often a change between the different positions.

Aspect 12: Morale
P acts out of an exaggerated conscience or out of lack of conscience.
In the first case, there is usually a scrupled personality.
If the conscience is the last instance and P acts out of it - and not towards it - the affected person will believe to know exactly what is morally and what is not. Being in this position, P is convinced to know exactly what one is doing right or wrong.

Aspect 13: The Distorted View

![Distorted View](#)

Just like looking through different glasses, the affected person has different views.
Left: = pro-view; Right: = contra-view; Middle: = ambivalent view.
Left: like magnification, rose-colored view with advantages². Right: dark prisms or no view.
Note: Looking through the different ‘glasses’ at the same time is also possible.
**Personal Dynamic towards the It (Addiction; Defense, Anticathexis, Repression)**

**Generally:**

Considering mental disorders, this topic is more important than the described dynamics of P as It because here, the person has to make more sacrifices for It than before. P is like a prisoner of the It. Therefore P has to make appropriate sacrifices, to receive the positivity that seems absolutely necessary and to fend the negativity that appears dangerous and hostile. Put religiously: After eating the fruit of the tree of knowledge of the good and the bad in paradise, we seem to be cursed to absolutely need to achieve the good and avoid the bad.

P is in a `psychical Bermuda Triangle´ (see graphic). P is trying to find an absolute +*, and sacrifices with that +¹ from him/herself (or other +) in the long run. P does not find peace in that triangle and jumps from one pole to another. P cannot be with, nor without the It. Whenever a +sA becomes my life, my drug, then the loss of it or the −sA is like dying or death. Therefore, I do everything to assure that +sA stays alive and to avoid −sA. With that, there is a constant necessity of exertion because the +sA needs to be fed, and the −sA needs to be fought at all times. The It lures with a +sA and threatens with a −sA.

The It can be everything for P: +It (object of addiction), −It (object of defense), or 0² (zero-object).

---

![Psychical Bermuda Triangle Diagram](image)

The opposites are ever-present. At least potentially. After reaching the +sA, or the defense of −sA, the respective opposite becomes stronger because the price is becoming too high to keep the +sA alive and to avoid the −sA. The result is: I hate and love the It too much. From which I depend, I love and hate too much. Also: The dependent person makes easily other people dependent.
Addiction

P is looking for a +It/sA that gives absolute positivity (+*).
P feels great, awesome, high, when receiving +*.

Addiction to What?
The addiction is directed towards something absolutized positive. Usually, that is a +sA. But it may also be the positive side of −sA or of 0, that we are addicted to. That is the case if +sA became too expensive, and if there is no other +sA as an object of addiction.

More important than addicting substances (alcohol, drugs) are `behavioral addictions´ (=non-substantial addictions).

Addiction to +sA

In the beginning, the It mainly offers its positive side, the +sA. It always promises more than it can give. Compared to the first-rate positive, the It often has the advantage of faster satisfaction, even if that is usually connected with higher costs for P.

All aspects may function as +sA

Examples:
• Success (aspect 15)
P always and consistently has to pump successes into the It-center to feel good because the +sA that causes well-being has only short-term effects and becomes soon weak. We have to feed our Egos. Therefore we are doomed to success.
• Safety (aspect a5)
Safety is often conveyed by accurate rules which must be obeyed, like in an army. With an absolutization, the actual danger is often pushed in the background. (A very grotesque example was the instruction for the terrorists of September 11, 2001, to make sure that their clothes are clean before the dying.) It is also a common behavior for people with compulsive illnesses, that feel secure by following certain rituals. Those compulsions have a high cost for the affected person.
• Health (aspect 5)
The specific +sA, or its representatives, the health fanatics or people that use health for business, the believers that view God only as a God of health - all of them tempt others people with the message of health being able to be achieved completely if certain requirements are met by P. (Ideology of `healthism´).
• Satisfaction (Aspect 7)
Currently, drugs, internet addiction, soccer (and similar) play a big part in this aspect. The more we are seeking satisfaction with those kinds of Absolutes, the more we will receive

---

89 I write often for the sake of simplicity instead of P² only P.
compensatory-satisfaction (or compensatory-fortune). And as soon as the compensatory-satisfaction becomes too expensive or does not fulfill us anymore, we will try to find another + *object. We may also let a part of an unachievable object fulfill our needs temporarily: at least catch a glimpse of the loved one, a piece, an idol’s autograph, etc.
The terms of psychoanalysis describe similar aspects: compensatory-satisfaction, compensatory-objects, compensatory-actions. C. G. Jung denotes neurosis as compensatory-affliction.
(It should be added: neurosis as compensatory-luck, too).
Briefly, the theory of S. Freud: Since the original object of love (mother) is forbidden, the child tries to find a compensatory-object. The consequence of the suppressed original wish may be a symptom. With that, the original wish would be partly satisfied because of the associative connection between the wish and the symptom, so that with the symptom, the wish is fulfilled symbolically.
Freud says that a compensatory-satisfaction takes place, whenever a wish or a drive/instinct cannot be fulfilled due to inner or outer prohibitions other actions are made to (partly) fulfill those needs.
I differentiate: first-rate (heavenly) happiness, that is free of costs, and second-rate "happiness", that has to be paid for (compensatory-happiness).
• For a general description of the topic `addiction to life` see the section `Life and death as sA`.

Addiction to +Side of a −sA

Examples:
• Choice/search of a negative identity (Erikson).
• Seeking for sorrow, such as in: “It is easier for me to feel sorrow than to constantly be happy.”
  Or: “My sorrow is the strongest weapon against the fake optimism of my parents.”
• “Addiction to illness” see: “Morbid gain”.
Also: Depression is the strongest (second-rate) remedy against the danger of becoming manic. The same applies to mania, which is the strongest (second-rate) remedy against becoming depressed.
Addiction, drive or pulse to the +side of a − part of an It is also a defense of the – sides of a +sA.

Addiction to +Side of 0

Examples: Longing for nirvana or every-day reaction: If I cannot get everything, then I do not want anything at all. Because: The nothingness seems more bearable than the loss of +everything.
Defense and Anticathexis

Overview and Definition

Talking about defense or defense-mechanisms (DM), I am referring to second-rate, usually unconscious reactions of the affected person towards absolutely negative perceived experiences (−*), which actual are only relatively negative. Negative* sides of the different It/sA (or −A) are being fended. Whatever is perceived as absolutely negative, the affected person will view it as an attack on the Self. Therefore the person will not react relaxed or with relative methods. On the other side, the defense-reactions are inadequate, exaggerated and expensive, compared to first-rate solutions. Synonyms or similar terms for defense-mechanisms: anticathexis, counter-reaction, second-rate protection/defense.

Anticathexis I view here as the defense of a part by an opposite. (More see below). The “defense” of negatively perceived consequences of +A is referred to as resistance.

I view solutions or (primary) protection as first-rate reactions of the affected person towards the −* and other negative.

Coping and Defense

In short, “coping” is generally understood as stress management. There are fluent lines between coping and defense. The more it leans towards defense, the higher are the costs. I mean, defense and coping have only secondary value because they depend at last on the strength of humans and a human has only limited strength. In contrast, first-rate solutions are mainly based on the Self, require less effort and are less costly and more effective in the long run. I.e., absolutely negative experiences cannot be managed by the I alone because the I only has relative force/strength. Concepts of therapy and defense that are more focused on the I than on the Self are in my opinion secondary. Typically, the Self did not play a big part in S. Freud’s theories. The Ego and rationality were Absolutes for him. (Freud: “Where Id was, there Ego shall be”, “My God Logos” and so on.)

However, a defense system that focuses on both of it (Ego and Logos) in the center, seems to be too weak to compensate deep disorders. I think that is also the reason why Freud only saw a few starting points in psychotherapy of psychoses. The strong and integrative powers of an actual Self remained unconsidered by him. Even the self-psychology only tries to extend old psychoanalytic models because it defines the Self only as a Relative. (Further, see in ‘Self-strength and Ego-strength’ or in the unabridged German version).

What is Being Fended? (Targets of Defense)

As mentioned before, everything that is experienced as absolutely negative is a target of defense. This is:

90 See also ‘Summary table’ columns O and P.
91 I will equal treat anticathexis and reaction formation here for the sake of simplicity.
1) –sA and the consequences
2) – of +sA (e.g., too costly harmony, esp. the loss of a +sA).
3) – of 0

About 1) Mostly fear, sadness, pain, guilt, anger, conflicts, bad experiences and burdens are defended. Especially what was experienced as absolutely negative has to be defended. At these parts that P identified him-/herself with, P is mostly endangered if they are being attacked. I² am the It. If you attack something* of me, you are attacking my Self. I call that the open black (or in case of +sA: white) gates within the defense-system of a person. Then P cannot differentiate between objective issues and personal issues.
(Also see: Vulnerability-stress-theory).

About 2) If somebody/something threatens my +sA, and I have to fear the loss of it than somebody/ something becomes my enemy because it threatens the center of my existence. “All my life I have been haunted by the obsession that to desire a thing or to love a thing intensely is to place yourself in a vulnerable position, to be a possible if not a probable, loser of what you most want.” (Tennessee Williams)⁹²
That means that also the positive can be fended or feared if its negative side becomes too visible.

About 3) 'Horror vacui' spreads fear and terror. P has to fill −0 with something. P has to pay a price. A constant escape from an unbearable emptiness. How many people cannot be without constant input.

Thus, P² often fears the loss of +sA, the coming of −sA or total emptiness more than its own death.

How and with What is being Fended? (Remedies of Defense)

With what P can solve or fend off Negatives * ?
1. The first-rate remedies and opportunities leading to First-rate solutions are discussed later.
2. The main second-rate remedies are:
   • Coping, which are more conscious, need Ego- strength and unnecessarily high expenditure of energy since the Ego does not act out of the actual Self (resp. + A).
   • "Defense by Sacrifice".
They are described later in 'Sacrificial-dynamics' and `Emergency solution by disease´ which play a special role in the pathogenesis and other Emergency solutions.

   • Defense by “Anticathexis” = defense by respective opposites: ⁹³
The term `anticathexis´ is defined differently in the literature. I use it here to defend a part by its opposite, similar to the so-called reaction formation. Instead of `anticathexis´, I would therefore speak of `defense by opposites´. See also section: 'It-parts as Opposites..', where we found how inversions in the second-rate realities create opposites that can strengthen, fight or neutralize. Here is about the latter two functions.

---

⁹² Tennessee Williams, “The Theatre of Tennessee Williams”, p.4, New Directions Publishing.
⁹³ Inclusive reaction formation.
One can differentiate:

a) Anticathexis by the contrary opposite (example: +sA against –sA)
b) Anticathexis by the contradictory opposite (0)

The opposite It/sA of the same aspects are to be mentioned first, ultimately all the other aspects are to be mentioned too. Example: Defense against the disadvantages of wealth* with modesty* (same aspect) or with self-punishment or illness (different aspect).

c) Anticathexis by a similar part (This could also be called “defense by Co-cathexis”).

Further Differentiation:

**+ Anticathexis**

P puts +* against –*, resp. ‘false Gods against devils’.

Examples: Work against boredom, hyper-control against chaos or sex against mortal fear.

(Similar to S. Freud's anticathexis 'Libido against Destrudo'.)

**– Anticathexis**

A common saying is “To replace devil with Beelzebub”, which describes the process of replacing a negative aspect with another negative aspect that might be even stronger. Illness as defense plays a big role in this aspect.

Example: Woman with cancer: “I hate everything to prevent myself from dying of fear.”

S. Kierkegaard: “Since my earliest childhood a barb of sorrow has lodged in my heart. As long as it stays I am ironic if it is pulled out I shall die.”

Additional example: If parents keep correcting their child over and over again, expecting it to speak properly, the likelihood is high that the child starts to stutter or stops speaking. Stutter can also be viewed as a counter-reaction of the child. In those families, functionality and speaking are absolutized. To go against the pressure of expectations of those families, a counter position can be the strongest weapon. A distinct dysfunction (stutter) will be used against the sA (functionality). Usually, there will be some kind of (unconscious) power struggle about the existence of the old sA (functionality), which stabilizes the family on the one hand but mainly overstrains the index-patient. As a rule, the affected person has no precise position but switches between pro- and contra-sA. The person sits between the chairs. Sometimes, he/she still finds hold in the old sA, although it is also overstraining for him/her. This situation applies to many psychical ill people. Depending on the case, illness as a defense may be more or less an anticathexis by – or by 0.

**Anticathexis by 0 (Repression)**

94 https://jebralston.com/tag/longing-2/
Here, it is about the mechanisms, where \(-*\) is defended by a 0 (Nothing).
Psychoanalysis mainly describes those mechanisms by using the term "repression".
I will present two examples out of the publication of I.D. Yalom 'The Schopenhauer cure' 95
"Schopenhauer made me aware that we are doomed to turn endlessly on the wheel of willing: we want
something, we get it, we enjoy a brief moment of gratification, which quickly sinks to boredom, then inevitably
the next 'I want' follows. To breastfeed the desire is not a way out - you have to jump completely off the cycle
... In fact, these ideas are also at the center of the Buddhist doctrine." (p. 360, 338). (→Buddhism).
Additional keywords about that topic: Stoicism and similar escapism-ideologies; Buddhism:
“Nirvana”, “Victory of renunciation”. Hermann Hesse: “Courage, my heart, take leave and
fare thee well!”; Goethe: “This, die and become”, and many more. Also: Fending off the
negative sites of the all by the nothingness.

S. Freud’s Anticathexis in Comparison with Pro-Contra-sA-Dynamics
S. Freud: Anticathexis “a psychical process that supports the psychical defense. Its main use is to
prevent desires of a drive of the It to become real. Destrudo helps to neutralize libidinous desires -
or vice versa.” 96

Discussion:
In my opinion, it is an expensive emergency solution in the second-rate realities. 97
Anticathexis is about the dynamics between the named It-parts (pro/contra sA) which stand in
opposition. E.g., if a part* (sA) is experienced too negative, its effect can be neutralized by its
opposite (Contra-sA). This anticathexis requires a constant supply of energy. Even according to S.
Freud, this energy is as great as the energy that the repressed part* has.

The Double Character of Defense-Mechanisms (DM)
Due to the fact that the sA/Its and their consequences are ambivalent, one sA may
strength and/or weaken the defense-system. This mechanism can be compared to a tank
that weakens the defense because it is very immobile but it also makes them less likely to be
attacked. Another example are debts, that help at first but become very burdensome in the
long run. Depending on the situation or the time frame, there are either positive or negative
consequences in the foreground. Therefore, the sA/Its resp. the strange-Selves may be the
second-best friends (following the Self), or the second-worst enemies (following the actual
negative Absolute). However, the defense is always more costly than a first-rate solution.
Overview of possible defense mechanisms from one's own point of view, see the 'Summary table' columns O and P.

Summary of Defense-Mechanisms

(How?, How long?)

---

96 Cit. by UH Peters literature list.
97 Note: Freud only describes dynamics of second-rate realities.
• Who defends? P².
• What is being fended? Everything that is experienced as absolutized negative.
• Why? To defeat the negative and keep the positive.
• With what? Everything that is experienced as negative can be fended by all psychical relevant aspects.
• How? Especially by anticathexis or sacrifice.
• Where? Mainly in the unconscious of P².
• How long? Until one +sA predominates or until an actual solution was found.
• What is the price? P² mostly pays with parts of the Self, otherwise, everything that is of psychical relevance can be used to pay.
• Who pays the price? If it is a sacrifice, P² mainly pays the price him/herself, otherwise it will be paid by other people or other realities.
• How expensive is the price? The DM is the more expensive, the more has to be sacrificed of +A or the Self.
• What is being defended? The It and its system resp. the Ego.
• Active or passive? Conscious or unconscious? Actively and consciously as action or reaction especially in form of coping; passively and unconsciously in form of processes and functions especially in form of defense-mechanisms.

P-Dynamics toward Nothing *
It depends on the side of the nothing*:
1. Towards the main side of nothing (0 of 0: strange emptiness, nothing) → must be filled.
2. Towards the positive side of nothing (+ of 0: Examples: Nirvana, belle indifference) → 'Search' or addiction.
3. Towards the negative side of nothing (− from 0. Examples: Horror vacui; Hell as nothing?) → Defense.
If we consider the behavior of P² in relation to the all-or-nothing alternative, then P² wants primarily everything +, nothing else. If P cannot have everything, she prefers nothing, rather than a Relative one.

Ambivalent and Paradoxical Reactions
Patient L: “There are two main misfortunes that I fear: First, if that what I fear the most becomes real and second, if that what I desire the most becomes real.”

To be exact, every reaction of P² is ambivalent because the It of them is ambivalent as well. The strongest ambivalence exists if a +sA-part and a −sA-part of one It are of equal strength, or if there are two contradicting Its facing each other. P² is caught within the It. So, P² is facing contradictions and paradoxes, that seem intractable for P² and that are the basis of
many mental disorders. P² constantly finds himself in all-or-nothing situations. P² can be torn between the plus-parts and the minus-parts of It (sA or −sA), or he falls into the nothingness. The affected person will have an excessive love-, hate-, or indifference relationship with other people. Because the sA are experienced very differently by the person, there can be some crazinesses, that cannot be explained or understood with common sense. E.g., whatever was fended first because it had a −* connotation may become +* and vice versa. However, that crazinesses may have important functions in the second-rate dynamics. There are often multiple functions at the same time: Addiction and defense at the same time (s. Freud’s “mixture of drives”) or alternating. Addiction, defense and sacrifice as functions of the opposites (sA, −sA, 0) are parts of the totalitarian unit 'It'.

Keywords: If the enemy dies, the false friend will die as well, resp. if the “devil” dies, then the false God will die, too. But also vice versa: If the devil dies, the false God can have a short high. The false God needs the devil in order to be itself and vice versa. My “God” is also my “devil” (or nothing). Whatever I love excessively, can also be hated excessively. In relationships, those people tend to love too much (→ pact, symbiosis) or to hate too much (→ enmity) or living both sides (love-hate) or to lose themselves in emptiness (0).

I repeat: those opposites are just two sides of the same coin, the It (resp. the strange Self). Although they are opponents, they are friends when it comes to the opposition towards the first-rate Self. The opposites can be active at the same time or appear in phases one after another. E.g., hyper-position and hypo-position can be taken simultaneously or successively. “Because I am so submissive, I am the greatest and better than the others.” Or the succession of two contradicting desires: “I desire your love but because I experienced love as exploitative in my past, I am also afraid that you love me.” Likewise, I can now love something that I hated because it frees me from the flip side of a +*.

For example. "I hated the exhausting diets (during anorexia), now I'm (unconsciously) free of it and eat me full (bulimia)."

Such contradictions and paradoxes are created by Inversions, such as described at the beginning of the chapter 'metapsychiatry'.

Example of a Patient

Patient W. had problems with women: He viewed women either as saints or as whores. He desired but he also feared to fall in love. He was longing for intimacy and affection but was afraid to become dependent on a woman. Typically, he fell in love with a prostitute because she was also depending on him. That way he was able to direct the relationship. However, the more he fell in love with her, the more he was afraid to lose her or to lose himself. He could not be without her anymore but at the same time he could not “really be with her”.

98 „Psychical Bermuda Triangle“.
“I loved her and I hated her.” As a result, he developed fantasies of murdering to her to end the dependency and because he did not endure imagining how she slept with other men. But it was paradoxically also been right to him that she had sex with other men because that way he did not experience his dependency as that strong.

Other Examples for “Love-Hate”

- In sadomasochistic relationships.
- In Borderline-disorders.
- Tolstoy and his wife.
- Pablo Picasso and the women.
- All people that sacrifice too much for others. For example: Idealists for a certain idea, mothers that sacrifice too much for their kids, men that sacrifice too much for their job, a partner for the other partner, etc.

“If you begin by sacrificing yourself to those you love, you will end by hating those to whom you have sacrificed yourself.” (George Bernard Shaw). A development worker: “Most people that I know went to the developing countries as idealists and came back as racists.”

(See also: ‘Possibilities of interactions’.)

It Dynamic towards P (Sacrificial-Dynamics and Consequences)

Not only "revolutions devour their children" (Pierre Vergniaud) but all Its.

"There is no strong desire that you do not have to pay for." (Elias Canetti)

The Its make all or nothing. Especially nothing. That is discussed here.

Sacrifice is a part of every second-rate dynamic and ideology.
The Its need sacrifices. They favor the Self, personal and lively subjects as sacrifices. Its need either a) of its own P or b) others as a sacrifice. Usually, it is connected with each other. Everything personal can be sacrificed. Very important for our topic: the sacrifice of health.

How are the Sacrificial-Dynamics?
The second-rate personal dynamics (D²) are determined by the Its. Their priority is the maintenance of the Its (resp. the strange Selves). The person can sacrifice itself or others for that.⁹⁹

If P sacrifices too much of him-/herself, P acts in a self-damaging and sickening way.
If a person sacrifices others (other people, other objects) he/she will cause others to become

---

⁹⁹ For example: One-sided love for one’s neighbor (altruism) has above all the consequence of loss of self-love (and also the loss of a true love for one’s neighbor), as well as a one-sided self-love (egoism) has above all the consequence of loss of love for one’s neighbor (but ultimately the egoist comes off badly, too.)
General: A second-rate Absolute (sA) has above all the consequence of the loss of the same first-rate Absolute (but also the loss of the opposite).
ill. (→ Emergency solution at the expense of other people).

As mentioned before, P longs for an absolute positive. P is convinced that the it is something good (the best) although it is not and views something absolutely negative although it is not so negative. To achieve the +* and fend off the −*, P lives of its own costs, of its own substance. P is a double loser! P loses the play and itself.

P may also use the advantages of inversion and lets other people pay the price for it. The consequences of the inversion can be transmitted within WPI! It can be transmitted between W and P and I or within W, P or I.

Concerning mental disorders, we are going to focus on the dynamics of self-sacrifice: Here, it is mainly about unconscious dynamics, about processes, functions and unconscious structures of behavior. Above all first-rate but also second-rate things are lost. Since the first are more serious, this loss is at the forefront.

(See more → Emergency solution at one’s own expense by disease. For all aspects, see also ‘Summary table’ columns O and P).

The Sacrifice of Absolute Dimensions

Especially the following first-rate dimensions are being lost:

a1 Sense, transcendence, faith and love
a2 Identity, the Self
a3 Truth, reality and opportunities
a4 Unity and variety
a5 Safety and freedom
a6 Basis, center and superstructure
a7 Autonomy and refuge.

Sacrifice of BLQC

Loss of first-rate personal being, life, qualities and connections and the subject-role of P.

Sacrifice of Single Aspects

1. Sacrifice of the personal wholeness.
2. Sacrifice of the personal relationship to God, which may also lead to senselessness.
3. Sacrifice of the first-rate personality, which may lead to apersonalism.
4. Sacrifice of individuality, which may lead to the loss of I to Non-I.
5. Sacrifice of first-rate parts of spirit, soul and body, which may lead to mindlessness, soullessness and loss of health.
6. Sacrifice of first-rate love, sexuality, gender-role, which may cause their loss.
7. Sacrifice of first-rate, actual emotions, which may cause apathy and deadness.
8. Sacrifice of the own will and voluntariness, which may lead to abulia and a lack of voluntariness.
9. Sacrifice of actual personal belongings, which may cause personal poverty.
10. Sacrifice of possibilities and skills, which may cause powerlessness and weakness.
11. Sacrifice of personal order with the consequence of personal chaos.
12. Sacrifice of orientation, which leads to a lack of orientation.
13. Sacrifice of personal rights and opportunities of control, which leads to rightlessness and intemperance.
14. Sacrifice of creativity, which causes a lack of creativity.
15. Sacrifice of own activities with the consequence of inactivity.
16. Sacrifice of first-rate information and knowledge, which may cause a lack of knowledge and blindness.
17. Sacrifice of opportunities of expression and candor, which causes mutism and a lack of candor.
18. Sacrifice of own values and meanings, which may cause a loss of values and meaninglessness.
19. Sacrifice of the own past, which may lead to a loss of experience.
20. Sacrifice of the own time and presence, which may cause restlessness.
21. Sacrifice of the own future, which may lead to a loss of perspective.
22. Sacrifice of the own opportunities of corrections and compensation, which leads to faults and a lack of correction.
23. Sacrifice of the own protection, which causes vulnerability and defenselessness.

In the 'Summary table' I have listed these "sacrifices" in column N with ↓.

More to Aspect 23: Loss of protection. (“The open gates of defense”)

![Diagram](image)

The open gates or sore points of the personal defense.
One can differentiate between white and black open 'gates':
the white gates represent the +sS and the black 'gates' represent
the sS.

The sacrifice of the own protection and security leads to something that I will call 'the open
gates of the defense of the Self'. P is in those spheres especially vulnerable and also manipulable. Therefore, a person can be hurt by taking away the +sS or by threatening with a –sS. The open gates (or sore points) of the psyche can also be recognized by the fact that P
will take something personal because P identifies him-/herself with it.

**The Spare Rest of P**

It seems important to me that despite all the P²-dynamics there is always a rest of first-rate
personality left. That is mostly the personal part, that still allows P to make free decisions. That fact is important for therapy purposes and will be discussed more detailed in a later chapter.

**P Sacrifices Others and Others Sacrifice P**

This publication is mainly about self-sacrifice and a lack of self-protection of P because that
represents an important cause of the emergence of mental disorders. Therefore, I will
discuss the sacrifice of other people only briefly. However, the mechanisms, as described
above, are the same. They are then focused on other people or the environment so that
those are more endangered to become ill than the person that is causing the actions. Equally
important is that the health of a person is often sacrificed by others, esp. if the affected P
has little self-protection.

[In total it-results and P²-reactions summarized - see `Summary table` columns L to V.]
Phases of the Interaction of $P^2$ and $I$t

This chapter is shortened to a great degree. To read more, view unabridged German version or chapter 'Relationship-disorders'.

1st Phase: Expansion and inflation with participation of $P$ (of society), monopolization, boom.
2nd Phase: Stagnation, crisis, tip over.
3rd Phase: collapse, finale.

1st phase: Expansion

$P$ is still over-identified with $+I$t. $P$ has not yet experienced a reversed side of the $I$t. $P$ tries to expand in the sense of $I$t.
Interphase: Increasing concentration on the needs of the $I$t; Exclusion of the enemies; Black-white-scheme.

2nd phase: Crisis

$P$ only stays stable as long as he/she has enough energy to follow $+*$, fight against $-*$ and to fill $0*$.
The exertion of force that is used by $P$, to stabilize the psychical balance/ the center, is becoming bigger and bigger. This force will be missing in general life.
In this phase, the $I$t will be experienced as more ambivalent and negative. $P$ becomes increasingly a victim of $I$t.

Typical features of this phase:

- Expensive balance

Ambivalent situations and dilemmas:
There are opposite phenomena that co-exist and keep a stiff balance.
There is always the danger of tip over, the loss of balance, or the risk of being torn.

Examples: see unabridged German version. Symbol also Yin-Yang ☯, see below).
• Vicious cycles or spirals

Vicious circles can arise between all opposing It-parts or pages. Here three possible main courses are shown (similar to electrons on their tracks with quantum leaps). They start mostly with pro/+, then because of increasing disadvantages, they spring to the advantages of contra-part (or to +0), and then the same game from the beginning or new games with new sA. That all at the expense of the person concerned.

• Zero point

There is chaos at zero point. The affected person is 'dangling in the air'. Usually, P has distinct symptoms, is vulnerable - and constantly endangered to fall back into old patterns. The advantages and disadvantages of the Its are equal. This is also a point where P has to make decisions. The zero point is danger and chance at the same time. In this highly labile state, just before a turnover of the system, the Its are very aggressive and cause P to be very agitated (example: Panic-attacks or florid psychoses).

• Reversal into the opposite

Starting position: +sA above, −sA below
+sA becomes more negative tipping point
−sA becomes more positive
contrary to the starting position: (−sA above, +sA below) or disintegration

This graphic illustrates the reversal into the opposite (psychical tilting mechanism) by using the Yin-Yang symbol or into disintegration. P can tip-over into the opposite or emptiness and breaks. Wherever previously advantages were, are now more and more disadvantages being created, until the It (or the system) turns completely into the opposite or disintegrates. The illustration should also show how the pros and cons of the It increase exponentially before the system tipping over. The system puffs up and collapses (→0) or tilts into the → opposite. 101

---

100 E.g., Friedrich Nietzsche: “… the man seems to have got himself on an inclined plane - now he is slipping faster and faster away from the center into - what? into nothingness?” The Genealogy of Morals/Third Essay.

101 In general: exaggerations, extremes, strange absolutes and the like.

E.g., Robert Musil: “Ideals have curious properties, and one of them is that they turn into their opposites if one exactly wants to obey them.” In: Der Mann ohne Eigenschaften, (The Man Without Qualities), Rowohlt, 2002, p. 229.

And P. Watzlawick, who pointed out that an excess of good always turns into evil.
In practice, it is mostly that the person(s) must sacrifice themselves or others more and more in order to compensate for the ever-increasing disadvantages in the system and thus to prevent the downfall of what is their Absolute, their "Self", even that what they themselves have become. It is the dynamics of whole societies, of whole cultures but also of individuals who were destroyed like this.

For me, Friedrich Nietzsche is a typical example of how in the course of his life an ever more dangerous, ever-increasing struggle for his ideals and against his anti-ideals led to his psychosis. (Also see: 'Crisis and falling ill' and 'About the emergence of paradoxes'.)

3rd phase: Collapse

P is now the final victim/ sacrifice of the It. (Also see: 'Sacrificial-dynamics').

Complex Personal Dynamics and Relationship Disorders

(See also the remarks in the section 'It-parts and opposites'.)

Possibilities of Interactions

Every P² can create a pact with another P², fight, or neutralize him/her.

(Symbols: ∞ = Pact, # = Opposites, 0 = annulment).

That means, they create pacts, opposites or neutralize each other because each of their It/sA-centers has three main options of reaction: too pro(+), too contra(−) or too 0.

Each P² is therefore very fast friend or enemy or indifferent to other P².

Put in other words: P² tend to love or to hate others too much, or to ignore them.

The graphic illustrates two P² with all their It/sA-interaction-possibilities.

Example: If the first P² absolutized 'wealth', the white triangle represents the pro-sphere (wealth) with its three sides/corners (+/-/0) = advantage, disadvantage and indifference of wealth.

The gray triangle represents the opposite of wealth - poverty - and its three sides/corners. The dotted triangle represents neither wealth nor poverty (0). All three triangles (parts of 1. P²) are connected to each other and dependent on each other. (→ 'It as nine-sided triad').

Depending on which side of the It/sA is activated, this will merge or combat or erase a second person's It/sA (or Co-It/sA). Suggesting that the second person is dominated by 'power', the advantages of wealth of the first person would create a pact with the advantages of power and collide with the disadvantages of power, etc.

(List of all interactions in second-rate personal systems, "games" of P², and details on pacts, antagonism and annulment, see unabridged German version).
Interactions of Opposite P²s

Opposite It/sA resp. their representatives fight or support or neutralize each other:
• Opposite It/sA fight each other if they are both connoted equally. (Example: Wealth is +*, asceticism is +*).
• Opposite It/sA support each other and make a pact if they are connoted opposite. (Example: wealth is −* and asceticism is +*)
• Opposite It/sA neutralize each other if they suppress each other´s advantages and disadvantages. (Example: wealth does not matter, asceticism does not matter).

Interactions of P²s who are too Similar

• Equal P²s create a pact if they are connoted the same.
• Equal P²s fight each other if they have opposite connotations.
• Equal P²s neutralize each other if they suppress each other´s advantages and disadvantages.

Overly Equals and Opposites in Relationships

When trying to find a certain cause for a certain result (e.g., certain actions/reactions/symptoms/behavior), one should not only think about the main cause but also about the opposite as cause.

A common example is the connection of morality and immorality. Usually, morals would oppress immorality. However, the opposite may occur as well if excessive morality causes immorality. In a relationship, that could cause a hypermoral person to cause amoral behavior of others.

Or: Excessive fidelity causes betrayal, fixated love causes hate and so on.

In principle love* views hate* as its enemy. Love* then, is the strongest remedy² against hate*.

However, excessive love* will promote hate* if love* became too negatively (too exhausting). Then, love* and hate* create a pact with each other. Also the other way around if hate* appears as too negatively, the excessive love* seems to be a savior.

Further examples:

Machismo fights feminism and vice versa - but at a certain point, both create what they fought before. Machismo suppresses women and brings surrogate potency to the man but in the long run impotence. Impotent men need machismo to stay potent, even though they tend to remain impotent in the long run.

Exaggerated feminism suppresses men and gives women short surrogate satisfaction but long-term frigidity. Frigid women need feminism for surrogate satisfaction, although in a long way they tend to remain frigid.

Both machismo and exaggerated feminism promote homosexual tendencies.
**Inversed topics always have two opposite meanings.**

Examples:
Because my father drinks too much alcohol, I drink too much as well. / Because my father drinks too much alcohol, I am not drinking.
“You are doing fine because you do not have much to do.” / “I am feeling bad because I have nothing to do.”
“We are so much in debt already, it does not matter if we spend a few more dollars.” / “We are so much in debt already, we have to save every penny.”
Her: “I am ill, that’s why I cannot also deal with your illness as well.” / Him: “I thought you would be able to understand my illness and my situation because you are ill yourself.”, etc.

There can be a special situation if the advantages and disadvantages (pro and contra) have the same strength. That may also be the reason, why one person is being desired and feared at the same time. One may fear or desire the opposite at the same time. In that case, one dear and desire one thing and its opposite simultaneously.
(See also: ‘*Ambivalent and paradoxical reactions*’).

---

**Personal System and Relationship Disorders over the Course of Time**

**1st Emergence of the Strange, Collective Absolute - the Collusion**

Origin of a disorder of a system or relationship is usually a mental overload. The affected people react to this overload by using compromises or emergency solutions. In the emergency, they try to find support and relief in the Relative. Since their previous Absolute has abandoned them, they establish new bases, new centers, new strange Selves, compensatory-Absolutes, or the reactivate old ones.

Often the new center is established within a group/system. That way, fixed balances are created (usually unknowingly) that save the system from the feared collapse but with high costs.

The system, as well as the individual, is in a constant dilemma: On one hand, there is a desire of changing the emergency-balance and to end the costs and on the other hand, there are strong tendencies of remaining the homeostasis to avoid the feared collapse.

The basic patterns of those disorders are equal to the strange Self-disorders and will be found more detailed in that chapter. In the following section, I want to point out the most important aspects of relationship-disorders. Such as the psychical disorders in general, the story of relationship-disorders is about dependence or lack of relationships. Dependence is mainly caused by false love and hate. Both cannot be held apart because false love also contains parts of hate and lack of relationship, such as a person that hates another person,

---

102 Therefore, all parties involved are more or less right in a conflict of interests.

103 In the following, I usually speak of the strange Self (sS) or the strange Absolute (sA) as synonyms.

One could also speak of the ‘It’ because of the cooperation of several sA.
cannot be apart from that person, and cannot build a real relationship. Dependence means dependent on sA; sA may be a person or something that was absolutized by P.

Example:
A person `A´ may be dependent on two strange-Selves (sS) that may be achievement* and intellect*.

This person `A´ is dependent on these two factors. They are important for him-/herself, `A´ is fixated on them. They have characteristics of an Absolute. `A´ gives them greater importance then him-/herself. Whatever we have already discussed when talking about the strange Self, applies here. The person `A´ is determined by three main factors: By the actual Self and two strange-Selves. Whenever other people create a relationship with person `A´, where they cooperate with `A´s dependence, a collusion arises.\(^{104}\) The direct dependences/ fixations of person `A´ will also become a dependences/ fixations of other persons/ people. More precisely: Person `B´ cooperates with the fact that the strange-Selves of `A´ (achievement* and intellect*) determine the relationship. Person `B´ is caught in a co-dependence.

These dependencies can only come from one person - but usually, two or more people are involved. In our example, there will be an additional sS (absolute fidelity towards the partner) of person `B´ that also is part of the relationship. Person `A´ will also be dominated by that sS. With that, the interdependence becomes even stronger. The absolutizations are transmitted and determine both of them (or the whole system). All the affected people then become dependent. On one side, the sS/sA cause the affected people to stick together, on the other side they appear as topics, that cause arguments and disagreements later on.

If we think of several people, such as a family (parents, two kids) that adapted the mentioned absolutizations, which we will mark as 1*, 2* and 3*, the situation will be as below:

104 Synonyms: pact, wrong friendship, symbiosis.
Illustration: Four people have the same absolutizations (1*, 2*, 3*), that oppress their own Self. All of the affected people are therefore dominated by the named strange Absolutes. Similar constellations can be found in bigger groups or societies.

There are other illustrations as well:

Left-hand side: People circle around three, second-rate fixpoints. They create an unstable wholeness. Motto: "We (A, B, C, D) agree that there are 3 priorities in our lives (here: achievement*, intellect* and fidelity*). They are our unconditional goals in life. They give us self-affirmation, fortune, sense, stability, etc. We submit ourselves to them."

Right-hand side: Possible “orbits” of these three persons around the three sA.

Although those people are individuals, they are mentally connected with each other through the sA and represent a whole, a system of collusion. One sees that the system of collusion is marked by the fact that it does not have one center but multiple centers that are orbited by these persons. They can be compared to fix points although they are really not. They may be called second-rate centers or second-rate fix points. The affected people “wobble” around them. Their orbit is more similar to an ellipse than an actual circle (Greek: ellipsis = deficiency). One may also refer to it as an unconscious, strange community-self, an unconscious, joint pseudo-identity, or as collective, strange absolutization/collective It, which is the basis of those systems.

This system is dominated by a certain spirit. Everything of the actual Self, such as identity, right of self-determination, self-esteem, self-security and so on, is made dependent on the collective, strange Absolutes (sA). Therefore, there is some sort of pressure for all the members to adapt to the system. Everybody has to function a certain way in order for the system to work. Even though the sA give the affected people what they cannot achieve themselves (at least they believe so) but at the same time, they are like holes that have to be stuffed constantly or like predators that have to be fed all the time. The food that they like

105 As I said, in this example, father or mother themselves (and what they represent) or else a person may form a wrong center point in the system.
the most is the Self. The sA partly protect the affected people but also expect them to give up their Selves.
The ambivalent role of fixated familiar mindsets, taboos, principles or ideologies was mentioned before.
The created wholeness with its different centers is only stable as long as the members confirm it to be so.
As soon as one person questions one point, or does not fulfill the expected role anymore, the whole system becomes unstable. As long as that does not happen, the system can be compared to a conspiratorial unity with strict rituals. If someone does not follow those rituals, that person has to expect sanctions. Instead of achieving free self-determination, everyone is stuck in the circle of common absolutizations. Family therapists also refer to this as 'family-myth'. Ferreira said that such as any other myth, that the family-myth expresses shared beliefs about humans and their relationship within families. They are convictions, that are accepted and viewed as something holy, although they include a great variety of falsehood. The family-myth dictates the member's roles. Those roles and duties are accepted fully, even if they are absolutely wrong and fatuous in reality. Nobody would dare to reassess them nor to change them. If a member of the family/system tries to play a role other than the one assigned, it will be seen and treated as a betrayal. Even if the change would be beneficial for all members, it is initially viewed as a danger that causes resistance. The resistance is stronger the more one or another member of the system has something to lose, although in the long run, it is the other way around. Everything in this world can be absolutized and then take a central position. As mentioned before, certain ideologies, ideals, taboos and people or their ways of thinking are most commonly absolutized. This makes them the cause of collusions. Especially concerning beloved people, a person often mistakenly believes that it is love to give up their right to self-determination and to place the other person at the center of their being.

It can be distinguished:
• identical (or symmetric) collusion: People who are part of the collusion have the same sA.
• complementary collusion: The absolutizations complement each other.
• mirror-image collusion: The sA are primarily opposites (+sA # –sA) but the reversed sides match each other (= pact of the opposites).
In the example given above, all the affected people have the same fixated centers. The main motto of the complementary collusion is: “I fulfill your unconditional desires if you fulfill mine in return.” That kind of ‘teamwork’ is even stronger if the members have certain

106 Quotation from M. Selvini Palazzoli. The quote lifts very emphatically the central role of what I call strange Absolute (sA).
107 The unadapted member usually comes into a counter-role (e.g., black sheep) which restores a certain system equilibrium. Or it is liquidated, brought to zero. To compensate, however, an external enemy image can also serve.
talents - or even: if everyone must do it. So, if one member has to achieve a certain thing, and another person has to give it to him.

Example: different strange Absolutes, that work in a complementary collusive way:

At first, these people are like in a wheel of fortune: their ideals* and taboos * complement each other and they both can be just as the other one needs them. At a later stage, it becomes clear that they have to be the way the other person needs them. The absolutized positive* has to be given at any cost, while the absolutized negative* has to be fended at any cost. These or other collusions are only possible if those affected people are not determined by the actual Self but by sA.

People can only be dependent within the system and collusively connected if they are also sA-determined themselves.

Whether it is an identical or a complementary collusion: The initial wheel of fortune eventually turns into a vicious circle (see below). Since the dependence is mainly unconsciously, it takes a long time to analyze the patterns of collusion. The affected people initially have a feeling of a strong common bond such as “We are creating an ideal whole
together”, or “We agreed that we will always be there for each other”, “Your luck is my luck”, “Only you make me happy”, or even “It does not matter how I am, as long as you are feeling good.”

Such symbiotic feelings are experienced as very pleasant by people, mainly in the beginning of a relationship. That is the +* side of collective misabsolutizations but that is inextricably connected to a −* and a 0-side. The core of the later combats can already be seen inside of them.

This situation could be symbolized as follows:

[Diagrams are shown here illustrating the balance between two people, with overlapping circles indicating the symbiotic relationship.]

The necessity of a balance between two people.
(The smaller the joint basis, the less scope there is for the two P in the system.
The basis is narrower the farther the sA is to the actual A.)

Or:

Illustration: symbols of collusion between a man and a woman. ¹⁰⁸
Both cores (Selves) are not free/independent, as it would be optimal but overlap each other.
One is within the core of the other, one is the other’s strange Self.
Left: The man determines the woman. Center: She determines him.
Right: The mutual heteronomy put together.

Both have a symbiotic, dependent relationship. He is within her core and she is within his core. In the beginning, they are complementary, although he is a strange Self for her and she is a strange Self for him. One is the other’s self-replacement. Such as: One is the other’s happiness because they cannot be happy enough on their own. Therefore each one also has to be the other person’s happiness. Or one is the other’s compensatory self-protection, self-esteem, self-determination etc. One’s desire becomes the other’s command. Each one has primary responsibility for the other one as well, which also limits the own right of self-determination. That also means: All people that play a part in a collusion give up their self-

¹⁰⁸ Instead of “man” or “woman” can stand also any other person or group relationship.
determination (partly). They then live a secondary, non-actual, heteronomous life, instead of a life that is based on voluntariness and self-determination. Everybody is in control of everyone else. If a woman has a lot of sex appeal, she might dominate the man. But at the same time, she makes to become the sex object of the man who therefore dominates her, too. Both of them dominate and are dominated at the same time. They are experiencing a +*(thrill) emotion if they receive whatever matches their +sA. But they also feel bad (‒*) if they lose it or if they are being confronted with their –sA. Then, there will be a crisis.

Another picture: Both work with each other like (uneven) gear-wheels: Wherever one person has a deficiency, the other person has something to give.

A lot of times, the patterns of collusion are cross-generational and can be found in the relationships of the parents and the children. In the next generation, one often finds the same sA (or collusive pattern) or the opposite! You may think of it as many gear-wheels, like a clock mechanism. Functioning is the top priority. The individuals represent the wheels in a gearbox (family, group, state). It is not surprising that some people feel like they are only a small gearwheel within a giant gearbox? If you look at the bigger picture you will realize that every single person (wheel) has to function/work in a certain way because the person him-/herself and all the others need it that way. Everybody has to turn him-/herself and all the others into slaves of their own strange Absolutes.

There are different sorts of dependence of the affected people within the system of collusion. It may come mainly from one person, while the others are just following (unknowingly). However, it is more common that all of the affected people are part of something that causes dependence and that also causes the others of the system to subjugate. To a certain extent, that is normal. Every person is somewhat heteronomous and transfers this to other people. There, the person is manipulable, corruptible, suppressed and debased.

As strong as the bonding powers may be, there will be more and more of a counter-tendency within the system, of trying to burst the bonds and to leave the system - especially when it comes to the members of the system that have to pay the highest cost for these fixations.

**Typical Examples for Collusions**

- An old, wealthy man and young, poor woman (complementary collusion)
- Prostitution: The man is giving the woman money in order to have sex, which he needs (or
believes to need), she gives him sex and receives the money she needs.

- Male helper - ill woman
- Admiring mother - thankful son
- Strict parents - obedient daughter.
- Harmony-seeking woman who desires to be loved - man who seeks acknowledgment.
- Partners who correspond in anti-sex moral (identical collusion). Both have a fixated view: Sex is dirty, they fear sex (−*). Advantage: No quarrel, no conflicts; Disadvantage: No pleasure.
- Him: addicted to alcohol and therefore impotent;
- Her: cannot be alone, gives him alcohol, causes him (unknowingly?) to stay impotent and prevents him from being interested in other women. He stays with her and secures his nursing and she does not have to stay alone.

In literature the following examples are usually mentioned: The collusion of a helper and a person in need (= oral collusion), a person who idealizes and a person that has been idealized (= narcissistic collusion), ruler and sufferer (= anal-sadistic collusion), sexual leader and the one being led (= phallic-oedipal collusion). Additional examples: Sadomasochistic relationship; Familiar collusion with a poster child and a black sheep; Victim-offender-collusion and so on. 109

There is an endless amount of such patterns of dependence. They can appear in relationships, families, or other groups and societies.

What is the Common of these Collusion Systems?

- They are being created if misabsolutizations and negations dominate within a system.
- Factual issues, that interfere with the sA, are taken personally.
- The affected person is dependent on his/her own strange Self and the ones of others.
- Everybody in the system is conditioned to those sS. Everyone in those spheres is manipulable, corruptible, alienated, dependent and became an object there.
- Everybody experiences the common sS as more important than the own actual Self.
- Everybody becomes an expedient (to reach the sA).
- Everybody is in the sphere of the others Self.
- Everybody only loves him-/herself under certain circumstances if the sS-requirements are being fulfilled.
- Everybody does not love him-/herself and others enough.
- The members sacrifice (partly) the most precious thing they have, the actual Self, for something Relative.
- In the beginning, the collusion has more subjective advantages than disadvantages to

offer.

- Everybody gives up his/her first-rate responsibility for him-/herself and the others. At first, it appears to be relieving. Nobody has first-rate responsibility anymore, which looks like a perfect deal. Eventually, that luck of fortune turns into a kind of clock mechanism.

Second Phase: the System is Still Functioning (Clock-Mechanism)

While the advantages of the collusion are in the foreground in the beginning, the high is coming to an end in this phase. The system is still working but it takes much more effort. The advantages and disadvantages of collusion are still balanced. The system is in a deadlock-position. Everybody gives the others what he/she has to give and is still able to meet the requirements. The reciprocity is still balanced. Since the advantages of the collusion become less, the system begins to be in a dilemma: The previous balance becomes too expensive but venturing something new seems too risky. The question is: Who has to pay for the dilemma? And: Who is taking the effort to solve the common problem?

Third Phase: Crisis, Enmity and Conflict

"Kill your neighbor as yourself". (André Glucksmann)

In the crisis, all the extremes become more apparent. The system loses its balance.

(Reversal into the opposite).

A crisis is developed if the compensation forces of the members are exceeded. It is the time of mutual set-off, blame assignments, in which everyone also has a piece of right. (Common example: He drinks because she is nagging, she is nagging because he drinks). The crisis happens along with similar intra-psychical processes. The crisis of the collusive relationship is preprogrammed if the affected people did not find a deeper solution so far. The disadvantages of those relationship-patterns become more apparent:

One is in control of the other. Everybody becomes more manipulable and corruptible. Everyone gives too much and sucks the other at the same time. They all become more and more irritated. That becomes understandable, as both experience some kind of love-deficiency and the compensatory-love is not giving enough. Both desire real love more and more. The only option they see is to give love by fulfilling each others S5-requirements. Since the affected people only love each other under certain prerequisites, it is hard to keep up the love, especially if the other person’s love seems to disappear as well. "I sacrificed myself for you." "I did not love myself anymore, I only loved you." Sentences like that can be heard in almost every relationship-crisis. Both experience more pressure, the more the crisis grows. Both of them have to put much more effort into the relationship, to be happy.

110 From a religious point of view, relationships that are not based on +A are particularly vulnerable.

Why? I believe we human beings are designed for an absolute, unconditional love, which nobody but only God can give us, but this is also not a guarantee for a happy relationship.
The freedom they have becomes steadily smaller and the dependency steadily bigger.

Illustration: The strange-Selves* that originally connected the affected people with their positive sides become separating strange-Selves due to their reversed sides.

In this phase, everyone feels like being the other person’s object of satisfaction (not without good reason). And indeed: They abuse each other and themselves (usually unknowingly) to keep their own +sA and to fend the –sA. The young, poor woman (example above) will accuse the old, wealthy man of viewing her as sex-object, while the man will accuse the woman of only being after his money. They are both somewhat right when saying: “You make me dependent on you. You suck me dry. I am only an object for you, only an instrument to satisfy your wishes (sA)”.

In this situation, the affected people argument with half-truths, where they view themselves as the only victim. They do not mention the other half of the truth: That they allowed the other person to act as an offender or that they offered to be treated as a victim. They will say “you do not love me”, while they do not love themselves either. They view themselves as losers and the partner as the winner, which is not accurate. They ignore the fact that the main reason for the crisis is not the lack of love to the other person but to something Relative. It is love on the roundabout way, “wrong” and fixated love, and all people included in the situation come off badly. Everybody is betrayed. However, the affected people usually have no overview. They do not realize what kind of unconscious dynamics caused them to be victims. Those people remain in a vicious circle, such as “I will only give you what you need if you give me what I need”, or “If you do not love me anymore, I will not love you either.”

Soon, there will be a fight. The affected people entrench themselves and fight for the survival of the mental life. In reality, they fight for the survival of their strange Selves. They are convinced that they cannot live without them. The partners usually argument on different levels: On the sS-level, or on the Self-level. The sS-levels are contrary in this phase and also contradict the Self-level. Therefore, those people live and talk at cross purposes with each other.

| PERSON A →|| PERSON B |
|  I gave you so much money* → | I gave you so much ← sex* |
| acknowledgment* → | ← dominance * |
| and much more → | ← and much more |
The communication, argumentation and eventually the fight of the partners is mainly about the sS* (arrows). People take different standpoints and therefore talk at cross purposes. Direct communication has stopped (||).

Such as the strange Absolutes were a big part of the relationship in the beginning, they are also the main focus in the fights. Jürg Willi: “Partners often represent themselves as a polarized unit that is being held together by a common issue of dispute”. Unconsciously but accurately the partners injure their strange Selves. Those are the sore points because there is no actual Self in those spheres (no self-protection, no self-esteem, no self-identity). Thus the attacks on the Absolutes will be experienced as an attack on the respective person him-/herself. Therefore, the attacked person feels like he/she has to fight for his/her right of existence, even for his/her life. The use of absolute-terms such as “always”, “never”, “definitely”, “impossible” is another indicator that the conflicts take place in the absolute-sphere of the person.

Let’s take another look at the crisis situation using the example of the boat without keel (= without + A), where two people maintain an expensive balance. Here, the complex dynamics in which the system members are located, is particularly clear:

They both stabilize and burden each other at the same time. They act right and wrong simultaneously. Right because they stabilize the system and wrong because the stabilization is of a very high cost and because they do not risk a change. So everyone can rightly accuse the other person of being wrong. But with the same right everyone will be able to assert that he stabilizes only the system and a change makes danger.

“You are the only reason I lean back so far if I did not do that, you would fall into the water.”

“That is your way of thanking me for my sacrifices that you’re blaming me now.”

The other person may argue with the fact that he/she has to lean out even further to balance the boat out because the other person is already leaning out so far. Both sides may have good intentions but receive only criticism for it. The affected person might even query him-/herself in silence. That way the circle is closed: I, or the others, or everyone is doing it.

\[112\] If P puts a matter above itself and identifies with it, then it means attacking on its own person from this point of view, if someone attacks the thing.
wrong. "How one does it, it is wrong." The system destroys itself.\textsuperscript{113} It is a fallacy to think that a person could free oneself by taking a counter position. The person remains in the system and stabilizes it even more. Only a positive destabilization (sitting relaxed inside of the boat, or -better- choosing a boat with a keel), or leaving the system will help. However, that is usually viewed negatively by the other members of the system because the system temporarily becomes unstable. If one member does not fulfill the common sA-requirements anymore and stops being manipulable, or he/she will not be able to be part of the stabilization of the system - then the system comes into a crisis and this member will encounter resistance (internal and external).

4\textsuperscript{th} Phase: Sacrifice, Illness as Emergency-Solution

If a system faces the danger of decompensation, it can be compared to a boat that is about to keel over. One of the most important tries to stabilize the (family-)system, is the emergency-solution with illness.\textsuperscript{114} The person sacrifices his/her health to stabilize the system. He/she is the victim and martyr for the system.\textsuperscript{115}

“I would rather be sick than seeing the others being sick”, “It is better to be sick than to call into question the family.” Such are the unconscious mottoes of the patient and he/she does not have to question its own absolutizations. Since the system becomes more and more self-destroying (the more sA-determined it is), the costs will be raising. Not everyone is paying the same price though. Even if the index patient often pays the highest price, it will nevertheless be sensible for the therapist to accept all members of the system and their situation and not to take a single-point position. Only if there is an accepting attitude it will be possible to try actual and deeper solutions which are usually painful for the included people, although they are an advantage in the long run.

(See also ‘Resistance’ and concerning therapy ‘The umbilical cord’ and ‘The small child in us’).

From Complex to Symptom

Complex Interactions

This chapter is mainly concerned with the development of symptoms or mental disorders by focusing on the various causative sA / Its or complexes.

S. Freud imagined that psychic powers can act such as physical forces with vectors. Then the

\textsuperscript{113} Of course, not all people are always good at others. But no one can judge from the outside about the motivation of the others. Therefore, it is wise to suppose initially a positive motivation of all system members, without excluding a negative one.

\textsuperscript{114} Elsewhere, unconscious emergency solutions are mentioned \textsuperscript{\textsuperscript{-}}\textsuperscript{\textsuperscript{-}}\textsuperscript{\textsuperscript{-}}\textsuperscript{\textsuperscript{-}} Emergency by disease \textsuperscript{\textsuperscript{-}}\textsuperscript{\textsuperscript{-}}\textsuperscript{\textsuperscript{-}}\textsuperscript{\textsuperscript{-}}.

\textsuperscript{115} Barbara Gordon describes in her book “I’m dancing as fast as I can” particularly impressively the overly high price for a “happy” but dependent relationship and how quickly it can tip over to its opposite.
sum of the energy would be converted into a symptom. Something similar is true of the field theory of Kurt Lewin, which states that "out of an arrangement of psychologically relevant forces (vector forces), individual behavior emerges."\textsuperscript{116}

Von Uexküll created the term of “changing function units”.\textsuperscript{117}

These conceptions correspond to those of this thesis, which regard the sS/Its and their complexes as dominating "function units" with corresponding vectors.

I assume the following hypotheses:

- Symptoms are equivocal because different reasons may cause symptoms to occur.
- Every inversion has the potential to cause/support any symptom, although with varying probability.
- Psychical symptoms may have organic causes.
- Symptoms may be signs of an aberration or a misbehavior of the affected person him-/herself.
- The appearance of symptoms may also have nothing to do with the person concerned but originate from other sources (environment, other people, etc.) Rarely are they from + A.\textsuperscript{118}
- Finally, symptoms can also be an expression of positive development; as in withdrawal, when the individual tries to relativize the It/sA-complexes on which he is dependent.
- Ordinarily, many factors together will cause a symptom or a mental disorder.

The sorts of conditions are similar to the ones of the emergence of weather or accidents. The weather forecast is probably still easier than the 'forecast' of symptoms. In most cases, the context of cause and symptoms is hardly able to indicate. Some conditions seem more constant, others more variable. Organic or even genetic causes are more constant, while psychical or mental influences are more variable. Even a very brief influence may cause a symptomatology, such as the last straw will break the camel's back.

The emergence of symptoms appears to be dependent on the following factors:

- What kind of It/sA are being effective? The kind of It/sA also determines the effects.
  What effects does the +sA, or the −sA have? The +sA mostly attracts (addiction), while the −sA causes fear. What is the difference in the effects of a +sA in the shape of a person (idol*) and an object, or ideology (success*)?
- How is the interaction and how influences that affect the person?
- How is the person structured? Organically or psychically.
- Where are their “black”, “white” or 0 points, where P is seducible, able to be frustrated, or without answer?
- If a dysfunction has been established, it will most likely affect the sphere, where the

\textsuperscript{118} Relative negative can come also from God and from the −A relative positive, but God aims ultimately at the + A and the −A has the negative to the goal.
certain function is necessary or dominant. (Regarding psychosomatic medicine: skin: mostly contact; gastro-intestinal tract: mostly ingestion and excretion; liver and pancreas: mostly processing/digesting; kidney: mostly excretion; larynx: mostly output of information, etc.) However, some authors exaggerate those connections.

• How are the outer circumstances?
• How is the further inner/outer interaction between all the effective powers?

There are many factors that determine what kind of psychical or mental disorder is being developed.

Or as Heimann said: The symptom is the “Common end of complicated condition connections.”

As mentioned, I believe that inversions play a big role as primary causes.

In addition, I am convinced that the cause of the mental disorder is less specific than generally meant.

One reason for the small specificity of the causes can be found within the “spreading and compression” of the effects (discussed below).

Spreading and Compression

E. Bleuler writes: "Contrary to previous expectations, one and the same damage, which has a psychological effect, may lead to many symptoms, and one and the same symptom may have many causes." Similar A.R. Brunoni: “… patients with different mental disorders can share similar symptoms, while those with the same diagnosis might have different symptoms.”

L. Ciompi has attributed these experiences to various generalization and abstraction processes.

In the context of this publication, that means:

All It/sA and their complexes scatter in such a way that they can cause many disorders, such as all pr disorders may be caused by various It/sA and their complexes.

None of those entities has only one effect but multiple effects with three contradicting ones each (pro-, contra- and 0). If we assume that every person is carrying a great number of such complexes, then that also means that there is a great variety of different factors of effects.

---

119 Heimann see bibliography.
120 E. Bleuler see the bibliography p 113.
Read from left to right, those graphics illustrate the following aspects of spreading and compression:
- The picture on the far left illustrates how one It (*) is the cause of three opposite vectors: There is one main-vector (solid arrow) and two side-vectors (dashed arrows). The main-vector is based on the dominating It-part (here: +pro-sA) and the side-vectors are based on the contra-sA and the 0-part of the It. Every It “scatters” in three different directions. Even if there is only one main-effect seen superficially, the side-effects have a latent existence.
- The picture in the middle shows how different vectors of two Its work together: In our example, the main-effects and the side-effects of the two Its potentiate in a way that creates compression. The top compression has a positive connotation (such as a positive condition), the middle has a negative connotation (negative condition), and the bottom compression has a 0 connotation (deficit).
- The right picture illustrates how the situation within a person can be imagined: The two Its (*) that are located in the absolute sphere of a person (the Self) cause the described dysfunctions or disorders in the relative-sphere.

**Spreading and Compression in More Detail**

In the following graphic, I tried to explain the effects of spreading and compression in the example of the absolutization in aspect 14 (truth / lie).

Notes: 1. Here are shown only 21 aspects. 2. In itself, the spreading actions come from attitudes (ideologies) that are not listed here but are listed in the Summary table in column E.

---

122 For the sake of simplicity, this is only shown differently and not in opposite directions.
123 The numbering is not the same as for the other individual aspects.
**Explanations of table**

**About Spreading:**
In the left column of the chart, the different aspects are listed and it is being illustrated, how
the absolutization of aspect 14 causes potential factors of spreading on all of the other aspects.

It can be differentiated between a main vector and many side-vectors.

Examples:

1. Frank is lying to John. Following aspect 14, John will experience a disturbance of truth. Since the lie is hurting his self-sphere, the “whole John” is affected. That means that it is not only the disturbance of truth that is developing within John but (at least potentially) a disorder of the entire psychical sphere (all aspects): a more or less severe disorder is being developed of his I, of his relationships, of his inner structures and psychic conditions, ownership, opportunities, orders, orientations, freedom, success, reality, behavior, information, values, qualities, past, time, perspective, love, protection and safety (and so on). Those aspects are differentially affected. This becomes quite clear when we specify what exactly Franz’s lie was. Let us pretend that Frank lied when he said: “John, your wife is cheating on you!” John will not only internalize the lie itself but it will also affect the relationship and the intimacy to his wife. He will probably also feel worthless, be sad, feel some kind of loss, worry about the future, become tenser, dig in the past, etc. As mentioned before, those possibilities are illustrated in a simple way, as if the lie would hit a defenseless, uncritical John. However, an affected person will have some defense-mechanisms or solutions, which decide what is defended, internalized or solved. Seeing how difficult it is to analyze such a simple example, makes one realize how complicated such occurrences are in reality.

2. A woman is told by a doctor that she has cancer. If this information becomes of absolute relevance for her, it will affect the entire person, all the pr aspects, and it will cause certain changes and reactions (as illustrated in the table above).

3. As mentioned above, it could also be illustrated how all ideologies are affecting all the aspects (if they are defined as absolutized ideas).

On the right-hand side of the “possibilities of spreading”, I marked a gray column with ~. This column symbolizes that the spreading factor meets an (usually) unknown personal so-being (genes, experiences, predisposition) that also determines the characteristics and the dynamics. Due to the individual variety, I can mention it only briefly.

**About Compression:**

On the right-hand side of the chart, disorders of functions and second-rate actions of aspect 14 are listed as they may be developed as consequences of absolutizations. Focusing on the first example, they are mostly created by an absolutized lie but may also be caused by any other aspect = “compression”.

Another example: If we start from a sexual impotence, it cannot only have arisen directly from disturbances in this aspect (here Asp. 2o) but also from disturbances of all other aspects - e.g. through an Ego disorder, disturbance of relationship, by organic disturbances, by state or sensory disturbances, misconditionings, misorientations, inhibitions etc.
About the Lack of Specificity of the Causes and Consequences

I am convinced, that the fairly big lack of specificity of the causes of mental disorders is also the reason for the lack of specificity of the theories that try to explain the different psychical /psychosomatic illnesses. They seem to be exchangeable at a certain point, as you can see when comparing theories of the genesis of different illnesses such as anorexia, rheumatism, depression, fibromyalgia, migraine, stutter, etc.

One could call it the law of incompleteness of psychological knowledge and the discriminability of the causes of psychological occurrence. (See also the opinion of A.R. Brunoni below.)

I see a big resemblance if not even common roots, in the incompleteness theorems by K. Gödel.\[124\]

I also see parallels to the theory of spectrum disorders.\[125\]

A Brief Derivation of Some Exemplary Symptoms/ Illnesses

A sketchy superficial attempt to derive symptoms/illnesses from simple preconditions.

Examples:

- Fear, caused by:
  1. losing \( +sA \), or fear of its disadvantages.
  2. occurrence of \( -sA \).
  3. \( -0 \).

If something becomes \( +sA \), then I will be scared that I cannot fulfill its demands or that I could lose it. If something becomes \( -sA \), I will be scared that it will become. If something becomes \( 0 \), I will be scared that I have nothing at all.

- Schizophrenia: If splittings are in the foreground, especially if one or more ambivalent Its determine the person for a longer time. (Otherwise, see Causes for schizophrenia in ’Psychiatry’).

- Acoustic hallucinations: ’\( P² \) listens too much to what other \( P’s \) say’. \( P² \) hears voices of the ’homunculus’. (More see Hallucinations).

- Eating disorders: By absolutizing in the spheres of reception and possession in general and eating and similar topics specifically.

- Depression: loss of \( +sA \), while \( -sA \) or \( s0 \) are dominating.

- Mania: Absence of \( -sA \), \( s0 \) and \( +A \), while \( +sA \) (that \( P \) is identified with) is dominating.

- Obsessive-compulsive disorder: only if certain \( +sA \) are being fulfilled and \( -sA \) are being fended, the patient will feel secure. (Further see part ’Psychiatry’)

\[124\] S. lit.

Interpretation of Symptoms

Summary: The psychical symptoms are usually ambiguous, sometimes equivocal and contradicting. That means that they usually have a pro- and a contra-meaning. Therefore, the opposite interpretation of a symptom is very likely, too.

Role and Meaning of Illness and Health

“I believe that diseases are keys that can open certain gates for us. I believe there exist certain gates which only disease can open. [...] And perhaps illness shuts us off from certain truths but health cuts us off from other truths.” André Gide.

Remarks and Hypotheses

Regarding the role and the meaning of illness and health, I assume the following hypotheses:

• Suffering /illness/symptoms as well as well-being/health, are Relatives.
• Every of this Relative may have a positive or a negative (or 0) meaning /relevance objectively.
• Subjective feelings and objective situations are often not congruent.
• Suffering /illness or well-being/health, which function itself as sA, may have qualitatively equal effects/consequences, or opposite and paradoxical effects/consequences.
• To gain a +sA, or to fend off a −sA, P may sacrifice his/her health.
• At a high cost, illness may save us from the excessive demands of sA. Illness may force us to do what we are too scared to do (or have no will): to relativize the power of the sA. 126

Good Illnesses - Bad Healths?

Examples:
- For + sufferings: many crises, such as cord clamping, birth pain, pain of parting, pain after surgery, withdrawal, rehab, compassion.
- 'Bad healths': If they are based on the expense of others.

Similar: Actual Suffering and Substitute-Suffering

Is there 'actual' and 'non-actual' suffering/illness?

• Actual suffering (suffering¹). Actual = usually fateful, guiltless (regarding the affected person).
• Substitute-suffering = indirect, shifted, senseless, unnecessary or guilty suffering. Too much suffering of the relatively negative. Or suffering because it is profitable (→ Morbid gain).

126 As I explained, I distinguish between first-rate and second-rate ("neurotic") diseases.
If I do not specifically label the term 'disease', then it is about the latter, second-rate diseases, which are in the foreground in this section.
C. G. Jung came up with the hypothesis: “Neurosis is always a substitute for legitimate suffering”.

Neuroses would be the suffering from the non-actual. So, whoever avoids actual suffering, will face compensatory-suffering. With my words: Substitute-suffering emerges if the requirements of the It (and the It requires a lot) are not being fulfilled and that`s why the It punishes the person. These costs, usually in the shape of a symptom or an illness, means also a partial self-abandonment of P². I.e. P² has to sacrifice a part of the Self to satisfy the It. **But: In the long run, the substitute-suffering will be greater than the actual one.** This also means:

**Accepting the actual suffering will diminish the substitute-suffering tremendously.**

(⇒ First A then B.)

"More stress than in Auschwitz there was hardly anywhere else, and right there were the typical psychosomatic diseases that are so much taken for stress-related, virtually disappeared from the earth.”

**Do Illnesses Make Sense?**

An additional question to the one that was just discussed is if illnesses/symptoms have a sense.

Illness is relative. Therefore I believe that it can only be either relatively sensible or relatively senseless.

In individual cases that would be hard to determine.

A few examples will illustrate the difficulty of determination:

If the dentist puts us through pain by pulling out a tooth, then it is a sensible pain.

If a woman gives birth to a child, she will suffer it as a very sensible event. However, if a woman is being raped, that pain/suffering becomes senseless to me.

Contrariwise, not every kind of well-being or health is good or sensible. A drug-addict that has no drugs anymore will feel better if he/she gets new drugs again. A work-addict will feel better the more he/she has to do even if it is not sensible at all.

Symptoms that are based on the +A are usually very sensible, such as withdrawal phenomenons, or warning signs by excessive demands (such as burn-out).

The symptoms and illnesses that are in the focus of this publication and that are caused by inversion neither appear as absolutely sensible nor as senseless. Most of the times they are an expression of emergency-, or substitute-solutions that come along with substitute-suffering and therefore also some kind of “substitute-sense/reason”.

---

127 https://en.wikiquote.org/wiki/Talk:Carl_Jung
128 https://vitaosphaere.wordpress.com/tag/stressoren/
129 I am emphasizing this because there are people who see a sense in every suffering, in every illness. The rape itself is absolutely senseless - the resulting suffering is from a theoretical perspective, perhaps ‘only’ almost absolutely senseless. At 99.9% of senselessness, a “sense ” could be that we as the person concerned recognize the dangerousness of such ~A and protect us and our children from it. I believe: all symptoms appear very nonsensical when they are the result of other people’s mistakes.
Morbid Gain

Definition: gain, that an ill person receives from his/her illness.\textsuperscript{130}

Usual classification: (based on S. Freud)
Primary morbid gain: inner/subjective gain.
Secondary morbid gain: outer/objective gain (retirement, rest).
Tertiary morbid gain: gain for the environment of the ill person.

I distinguish:
1) normal morbid gain
2) second-rate, “neurotic” morbid gain.

About 1) “Normal” morbid gain:
Based on the hypothesis that no Relative is absolutely positive or absolutely negative, it is also normal that illness also has a positive part. That case is very common. One is ill and stays at home, does not have to work and is probably treated well and so on. That is normal and there is no need for treatment.

About 2) This is about the case when illness or the causes of illness became something too positive that is causing more advantages than disadvantages for the affected person. It can be compared to the morbid gain determined by S. Freud. This second-rate, or 'neurotic' morbid gain (which does not mean that it is only found when neuroses appear) mostly occurs if illnesses or its causes have no relative but absolute importance and therefore became sA. That means that the affected person needs the advantages of the illness to maintain mental stability. Thereby they gain relevance and power, which lets their dynamics appear so confusing.

From the point of view of P², the disease prevents worse (loss of +sA/ occurrence of −sA).
With the illness, P² has an alibi when it comes to the demands of It/sA. With the sacrifice of health, the subjectively best can be maintained and the subjectively worst can be avoided. The illness allows P² to be excused and to be reconciled with sA. A major disadvantage, however, is that the inversion consequences persist. These are above all: partial self-abandonment and further on disease.\textsuperscript{131}

\textbf{Morbid gain in detail:} Illness may allow a person to find sense in life (if it cannot be found without illness); Illness may allow finding an identity (if it cannot be found without); Illness may cause security (one is used to the role as a patient so that it gives security); Illness may allow gaining autonomy; Illness may allow maintaining the Ego or at least the strange Self; Illness may allow living an easier life (protect one’s Self from requirements and overextension); Illness may give more time; Illness may become an important weapon; Illness may allow manipulating people; Illness may cause to receive more love

\textsuperscript{130} U.H. Peters 1999.
\textsuperscript{131} The person has advantages by the Its only in the short term but in the long run more disadvantages. What Freud specifically said about the repression: "Preservation of repression presupposes a constant expenditure of force, and its abolition means economically a saving." (https://www.offenesbuch.com/g119506) - one could formulate in general: "The maintenance of an It-system (second-rate system) costs the person a lot of strength that he/she would save on in a first-rate system."
and attention from others; Illness may give more freedom; Illness may allow proceeding one’s own will; Illness may allow living aggression or other negative feelings; Illness may allow to hold on to old habits; Illness may cause more orientation and order in one’s life. Illness often has an alibi-function and is a relieving mechanism of self-punishment to be free from actual (or imagined) guilt. Illness may cause balance within the person/the system that is of high cost, etc.

Illness as a protection against the negative* can also be understood as a mirror image, of the '+list' above. Illness may be a protection against the senselessness of life; Illness may be a protection against the loss of identity and alienation; Illness may be a protection against insecurity, dependence and the loss of the Self. Illness may also protect from the loss of all +*. The listings make it more obvious that the ('neurotic') morbid gain is only a substitute-gain/ substitute-protection of high cost. However, it is also an emergency solution, that may save one's life in an emergency situation. Therefore, it should not be viewed as taboo.

Example: An anorexic young woman compensates her dependence on her parents, by dominating with her illness over her parents, thus securing substitute independence. At the same time, the dominance and control of the parents remain untouched. On the other hand, questionable independence on the one hand and questionable dominance, on the other hand, keep the balance with the price of the disease. Changing the role of one system member would create a crisis that is normal in this process of detachment. But since, like every crisis, it does not automatically end in a positive emergence or solution, there is also the risk of failure and those people concerned then avoid these crises, however, somebody has to pay some price for it.

(For more information see the unabridged German version).

God and Evil - a New Theodicy

Theodicy, in its most common form, is an attempt to answer the question of why a good and all-powerful God permits the occurrence of evil. Or: Why does not God fulfill some prayers? Can God be justified? (Theodicy).

An attempt of short answers:

1. Evil and illness but also well-being and health are relative and not the last. Only the redemption of people is absolute important for God but not the health or the earthly evils. On the other hand, it seems obvious that there is a connection between God and health.

---

132 Again and again, I have experienced how disease (even cancer) can lead to a great (oversize?) feeling of freedom among some affected persons. Perhaps also because we did not take that liberty when we were still healthy, which we now receive, albeit at a high price. Perhaps it was also because we saw that what we were perhaps too afraid of was not so much to fear. Or, religiously, the experience that God is stronger than all illness and death.

133 We are afraid of the −sA, we can also be afraid of the F0, but even before the + sA we can fear (for example, that we lose a + sA or that it does not keep what it promises or that it is too expensive).

134 I have the impression that we often shift the most negative existential problem, our death, to a different, milder level, namely that of the disease because we can thus prepare ourselves to death in a more tolerable way and, furthermore, we still have everything under our control.

135 When we are sick, we need no longer to fear the loss of our health, or experience it as liberation, no longer needing to take care of it.
Anyone believing that they are unconditionally loved and protected is also more resilient. But even the most religious person who is very resilient can get sick.

Is God able to cause illness? Principally yes, even if it is very rare.

Why? If God is the positive Absolute, then the positive Absolute is not health. Health is a relative positive, such as illness is a relative negative. That means that the absolute positive (God) may cause illness, and the absolute negative (−A) may cause health. However, since health is mainly positive and illness is mainly negative, the case that the most negative originates in the absolute positive (God), or the most positive originates in the absolute negative is very rare.

These abstract assumptions can also be found more concretely within human relationships. If we view the relationship between God and us as a love-relationship of two people, it becomes more obvious that even a loved person may cause negative feelings, suffering, or even pain, even though the original motivation was positive. God’s motivation may be hard to understand for us, just like it is hard for children to understand the sense of frustration or punishment. The murderer, as well as the surgeon, hurt us but the motivations are completely different. One can, on the one hand, say bitter truths to someone, which help but hurt - on the other hand, pamper someone and thereby harm. Wrong consideration, wrong reducing suffering, absolutization of health and well-being (and so on) are just as questionable as their opposites. Christian opinions, that view suffering or illness as a punishment from God are also very questionable because they posit an absolute connection between God and health/healing.

2. God has given man the freedom to be evil.

(= Answer of the theology in relation to the so-called 'moral evils', 'Free will defense' of theodicy.)

3. There is no satisfactory answer of theology to the so-called 'natural evils', such as natural disasters that man has not caused.

My thoughts on this are the following (in keywords):

To solve the theodicy problem may require other than our usual views of time and space but those of modern physics, such as the theory of relativity and quantum entanglement.136 This means that my attempt to explain presupposes a quasi pre- or supra-worldly existence of each one of us, even if this contradicts our current sense of a linear timing and a clear spatial allocations. But if we think like the physicists, it seems to me that perhaps each one of us has an existence that is supra-temporal and supra-spatial, too, and that we all are Adam and Eve, which act as examples. Anyway, I can identify with Adam very well. And do not I eat with every sin again from the Paradise apple?137 In other words, I believe that each one of us was in Paradise (= unseparated from God) and has a representation there (see quantum

136 See e.g., in https://en.wikipedia.org/wiki/Quantum_entanglement
137 Angels are perhaps the ones who did not eat the apple like Adam and Eve and are therefore still in paradise.
entanglement\textsuperscript{138}) but we went/ go "then and now" away from God, thereby we left/ leave paradise and came/ come to another unredeemed - just our - world, which, as such, inevitably contains the "natural evils". That's why: We ourselves, not God, would be responsible for both the moral and the natural evils from which Jesus frees us if we wish. Did not Jesus also have different views of space and time than usual when he said: "Before Moses I was" or he had been with God from the beginning?

**Concrete Examples (Hölderlin, Nietzsche ...)**

Note: In the unabridged German version, I have described this topic on Hölderlin in more detail. But even there, as here because of the complex problem, there are only some thoughts relating to this work.\textsuperscript{139}

Hölderlin and Nietzsche are for me typical examples of people who got sick because of various strange Absolutes. Especially Stefan Zweig (in "The Struggle with the Daemon") described impressively the development of madness in Hölderlin’s and Nietzsche's life. The term 'demon' of Zweig is largely the same as the 'strange Absolute' of this work. Werner Ross also describes very accurately Nietzsche's life and the genesis of his psychosis in "The Fearful Eagle". The analysis of both authors with respect to the development of the psychoses of Hölderlin and Nietzsche agrees with my metapsychiatric hypotheses even if the terminology is partly different.

If one also compares the information of the authors about Hölderlin's and Nietzsche's symptoms with the data in the columns 'It-Effects and Results' of the \textit{Summary table}, one finds there most again.

When Nietzsche's friend Erwin Rohde writes about him: "An indescribable atmosphere of strangeness, something completely weird at that time, surrounded him ... As if he came from a country where nobody else lives"\textsuperscript{140} - this is what I name 'strange person' here.

Hölderlin, Nietzsche and many other psychotic people seem to me like “Yin-Yang-people” rolling into the abyss and are broken due to their contradictions - just as I presented in the section 'Reversal into the opposite'.

What they lacked in the end, according to the hypotheses of this work, was an Absolute that could compensate or correct the strange Absolutes with their contradictions.

\textsuperscript{138} https://en.wikipedia.org/wiki/Quantum_entanglement

\textsuperscript{140} https://archive.org/stream/erwinrohdeeenbi00rohdgoog/erwinrohdeeenbi00rohdgoog_djvu.txt
Did not Nietzsche similarly see it when he wrote: "But we feel as well that we are too weak ... and that we are not the men to whom universal nature looks as her redeemers ... we must be lifted up - and who are they that will uplift us?"\(^{141}\)

PSYCHIATRY

CAUSES OF MENTAL DISORDERS

“For like the plant unable to root in its own ground,
the soul of a mortal will quickly die out.” F. Hölderlin

Preliminary remarks:
• In general to causes, see on `Causes and Results´ in Metapsychology and further on
`Emergence of strange realities´.
• Illness should not solely be interpreted as the consequence of misbehavior!
• Illness should not be viewed as the absolute evil that has to be destroyed.
• Every person can become ill (mentally and physically).
The causes of illness are similar to the causes of misfortunes: Every misfortune can hit any
person, although with different probabilities. The person concerned can become sick
without or by his/her own fault.

Underlying Hypotheses

I repeat briefly the most important:
1. Illness and health are of relative importance.
2. Illness is not absolutely negative and health is not absolutely positive. As Relatives, illness
and health have both, positive and negative sides.
3. The most frequent primary (!) causes of illness are Inversions. Inversion means that by
reversal of fundamental meanings like Absolute, Relative and Nothing, basic disorders take
place. Such reversals of meaning arise, above all, by attitudes that make a claim to
absoluteness that excludes other attitudes. ‘Isms´ or ideologies are typical examples of
this. Of course, mental disorders may also be caused secondarily by physical disorders
(“second-rate causes”).
4. Causes of mental disorders are rarely to be found only within the affected person him-
herself but in all of the spheres that affect him. A similar statement can be found in various
references about the discussion of the genesis of many mental disorders: “The genesis is

142 Translation by Maxine Chernoff and Paul Hoover.
143 Undoubtedly many clinically healthy people are much crazier than many patients. How is that possible? I believe that
these people will not be ill because they do not call into question their morbid attitudes and shift their disadvantages to
others. (See also ‘Emergency solution A´ in the Psychotherapy section).
144 In this publication, I neglect the role of the –A as an important cause of disease intentionally, because it escapes a
therapeutic influence.
145 The ideologies are only a well-known example of at least as important dogmatic and pathogenic attitudes in families or
individuals - or for those who lack fundamental orientations at all.
assumed to be multifactorial, with genetic, neurobiological and psychosocial factors constituting the relevant pathogenic causes.”

The share of the single factors is different in every case. I tend to focus on the spiritual spheres because I am also convinced that there are the most options of efficient therapies. That is usually not the case if one only tries to influence the biological-material sphere (brain, genes) usually by using psychotropic drugs.\textsuperscript{146}

**MENTAL DISORDERS FROM THE BIOGRAPHIC PERSPECTIVE**

**Beginning**

“And children grow up with deep eyes; They know nothing; they grow up and die.” Hugo von Hofmannsthal

The story of mental disorders usually begins in childhood, or as I believe, even before being born.

It is determined by the different attitudes that the parents or the environment transmit to the child or that are later on chosen by the child. All of those attitudes are ultimately based on different Absolutes. Whatever the parents and the environment of the child find absolutely important, they will convey to the child. This usually happens unconsciously and often in seemingly inconspicuous everyday situations. This Absolute may be an actual Absolute or it is a strange Absolute. Only the first one will actually match the child, while the second one may be the cause of later mental disorders. Then the child may not be able to develop its personality freely. To be more exact: the Self will not be strong and independent. We defined the ‘Self’ as an individual, unique core of the personality.

I remind the main characteristics of the positive Self: It is the actual and existential core of the person. It is unique and irreplaceable. It is the most important. It is independent at its core. It has something absolute, something holy to it. It is lovable in an unconditional way loved by God). It is made to exist forever. It is indestructible. It is a present (it is already given to a person and does not have to be earned). It lives on its own. Every person has the right to live with such a Self. I will define any other basis of life as strange Self (sS).

The more the parents take a Relative as absolute, the more the basis of life will be relativized and weakened. Then, parents, as well as the children, feel like it is about all or nothing, about being or not being. In this situation, what was in itself only relatively right and good must be fulfilled (if absolutized) at any cost (coping), while the relatively wrong and evil (if absolutized) has to be fled and avoided (\textsuperscript{\textit{→} Defense-mechanisms}).

Many times, the cause for it lays in misunderstood love, whenever parents transfer such attitudes onto their child(ren). They want to give their child orientation, but they interfere with the kid’s emotional and spiritual development if they absolutize Relatives because the

\textsuperscript{146} This does not mean, of course, that such symptomatic therapies should not be used.
Self is meant to be based on the actual Absolute. It needs a substantial ground - like a seed is put on solid ground so that it can grow freely. The Self does not only want to be strong, independent and precious, it also wants to be irreplaceable, wants to be itself, whatever it really is. That means that every person deeply longs for a true Absolute - he/she wants to be loved for him-/herself and wants to develop freely based on such love. When I speak about ‘free development’, I do not mean lack of orientation. The child should develop in a certain direction. Such as a plant grows towards the light, the sun. Without any kind of tightness or coercion. Such as the sun does not always stay in the spot but is shining on us with an enormous range. The parents/environment are not necessarily the light because every person/environment also spreads negative influences: In all families, there are (usually unconscious) fixed mindsets, taboos, strict principles, unspoken oaths and so on. Who does not know sentences such as: “Boys do not cry!”, “A good child listens to its parents!”, “Don’t you dare to contradict me!”, “A family has to stick together!” and many more. One may say that it is not the love speaking at that point but an imperative.

(To facilitate matters, the parents are named here as the most important reference persons. In reality, the child faces many different influences, such as traumas and environmental influences that have nothing to do with the parents.)

The initial situation is often in such a way that parents or the environment of the mentally ill people are also caught in inversions. Therefore, they lack freedom/independence themselves and are overwhelmed with unsolved problems. Their worldview is usually narrowed, frightening and fixated. Some seem to be strong on the outside and some might actually be strong, but they are overstrained. What they are usually missing is a free, genuine, absolute Self, which is capable of tolerating and protecting a weak, frightened, faulty I. Instead one has to be strong, brave and good - and the weak I will be hidden due to fear and shame. To the parents, another world than the own, a bigger and more independent world is full of danger because they are not able to control it. And, to be honest, which parents are not affected?

147 This refers to the + A and its synonyms.
The psychical problems within a family can be compared to debts: Families that struggle with psychical disorders usually have psychical “debts”. Many times, one or more member(s) of the family will pay those debts by sacrificing their health, while others remain healthy. Later on, we will see why it is that way. One thing is for certain: It is mainly a matter of fortune or misfortune if a person becomes ill or not.

As already said: The child needs a stable basis, an invulnerable core, a real, good Absolute and not something Relative but an Absolute that is not based on fulfilling requirements but one that is unconditional and that loves, protects and guides the child to allow normal psychical development. Such Absolute would be the unconditional love of both parents. If they cannot give love enough - usually because they have not experienced such love themselves - the development of the child is endangered.

Has the child bad luck, its Self is threatened to go down. Certain living conditions, personal misfortunes, traumatizations also play a big part since they may cause specific sA to occur. Usually, the child is too young to understand what is happening to it and is not able to fight against it. There is an unconscious mechanism that takes place in this dangerous situation. A mechanism that is of high cost.

The child identifies itself with the Self of its parent(s). It adapts excessively.

That leads us to the second act:

**Overadaptation or Enmity**

To save one’s Self, the child identifies with the parents. Above all, the child takes over what is of absolute importance for the parents. Collective Absolutes emerge.\(^\text{148}\)

The graphic shows how the child is shaped by misabsolutized positives or negatives (here by their parents). The created imprinting is just like a barcode with black (negative), white (positive) or black-white (ambivalent) sS (or defects that are not illustrated here). There is an analogy with genetic embossing.

The child mainly adapts to what the parents determine as good* and bad*\(^\text{149}\) - whatever has to be fulfilled and achieved (the good*, the ideal*) and whatever has to be avoided (the bad*, the taboo*).

Since the parents have absolutized Relatives, the parents and the child have the feeling it is

\(^{148}\) I do not believe that the embryo or the newborn is already completely identified with the mother but has an innate absolutely unique (core) Self that is different from those of his parents and all other people.

\(^{149}\) As I have mentioned, I sometimes label, to emphasize the mis-absolutized with an asterisk (*).
not just about something Relative but about all, about the Absolute, about being or not being. In normal development, the child also adapts to the parents and identifies itself with their worldview. However, it has the freedom to let go of whatever does not match its own identity, wishes or perception without being punished. Yes, children and teenagers have to question their parents absolutely and in a radical way to find themselves. Then they can choose whatever matches their own identity and perception or not. They retain existential freedom of choice.

However, wherever the Self of the parents does not match the own Self, wherever the child experiences it as strange-I or strange Self, there will be a central, existential and uncontrollable conflict within the child. The strength of this conflict becomes apparent if we consider the fact that it is about something that is experienced as absolute by the concerned. However, the false Absolute is strange to the Self. Those strange parts are unsolved complexes (like cuckoo eggs) within the Self and suppress the own parts. At those parts, the I is not master in its own house. It has to share its innermost, its own, with something strange, perhaps even hostile. That is the price the child has to pay unknowingly to save itself.

On the other hand, the child also has some advantages from taking over the parent’s Absolutes/ Selves: The child does not want to conflict with the parents/ its environment. It can rely on these internalized parts and values and finds some strength and identity, even if they are relative and strange. The child is caught in a golden cage. It basically (unknowingly) agrees with the parents to stay within that cage to be protected. With that, some sort of emergency-solution is being created for the child: Rather having a strange Self than to have no self-perception. Here is already programmed what we also find later in mental illnesses: The division and depression of the Self by strange self-parts.

Thus kids will be denied of their first-rate Absolute resp. Self. They may be misused as an expedient, as the parent’s or environment’s object.

T. Moser explained: “Many mothers need obedient children, to allow their own inner chaos to be organized. Or they need the children to have an echo in their empty lives. Or they need them to heal their own self-contempt by planning the child’s future. The emotional life of the kid tips over (dies) like an overfertilized lake, that cannot regenerate itself anymore. The person that has to be the pride of their parents never knows if he/she is really loved: there are always requirements or even blackmailing. What emerges was called ‘false Self’ by Winnicott. That false Self makes the unconscious expectations of the parents to its own matter. The more important the child is as a crutch for the parents, the greater the fear becomes, when later, in a relationship or in a therapy, it finds confronted with the longed-for and at the same time terrifying possibility that one asks: Who are you really? Whoever

150 A process which most clearly occurs during puberty.
151 There are many parallels between what is happening in a person’s inside and between the family members, groups, or countries. In principle, they are the same processes.
happened to be the parent’s pride, due to expected success or presentable dressage, has to constantly achieve more and trying to adapt in order to avoid panic and depression if the outer appreciation fails.”

Karen Horney described it similarly. Karen Horney described it similarly. "A child suffers from primal fear ... when it has parents whose own neurotic conflicts prevent it from offering the child the basic acceptance necessary for the development of its autonomous Self.

Throughout the early years of childhood, in which the child views its parents as almighty, the parental disapproval or rejection may only lead the child to conclude that something is horribly wrong with it. To get rid of the basic fear and to receive the essential acceptance and the love from its parents, the child realizes that it has to become different; it channelizes its energies away from the realization of its own Self, away from its personal potential and develops a construct of an idealized self-image - a possibility of how it has to become to survive and to avoid the primal fear.”

Kids usually do not have a chance to fight against the negative effects of the strange Absolutes/Its.
On the contrary, they unconsciously confirm these attitudes, especially since these are often not false but “only” exaggerated and one-sided. In this respect, the child often believes that the parent’s behavior is correct and its own behavior is wrong so that it suppresses its own negative feelings towards the parents and believes that it has to be punished. With that, the child is drawn into some sort of vicious circle, in which the occurrence of symptoms is a typical “solution”.
The situation becomes even worse if the child feels responsible for its parent’s problems. That is almost always the case. Even if the child is not able to understand and name the parent's problems, it still has an idea of what it is about and tries to help them by sacrificing its Self. The child starts to act like a parent of its own parents and is absolutely overtaxed with that role, even if it is only unconsciously (“parentification”). In worst-case scenarios, the affected children are mentally (maybe also physically) like senile childlike-beings. They are blocked in their free development, and they are additionally confronted with problems that cannot be solved even by the grown parents.

The worst thing that could happen is that the child experiences that it has to give up its own Self to receive appreciation and love. The child will despise or even hate itself and love the parents too much, although it unconsciously hates the parents too. However, it realizes that the parents are also caught in the game and it will try to love them still much more. It’s an endless circle, and nobody is there who knows how to end it.

152 Tilmann Moser über Alice Miller: Das Drama des begabten Kindes; DER SPIEGEL 29/1979 p. 141.
153 Horney, Karen: Neurosis and human growth; Quoted by I. Yalom.
154 I recall once again that the parents here are just as typical representatives of the environment. In individual circumstances it can be a matter of many quite different influences.
As I said, there are also over-adaptations in the so-called normal development, which are not necessarily required by the parents. Likewise, in normal development, there are always rebellions and resistance to the parents, which are very important for the self-discovery of the child, and are best taken serenely by their parents.\textsuperscript{155} There will be no disruption if the child experiences a basic love from its parents and thus is able to relativize the self-requirements. The child will not only be able to buffer the self through this love but will be able to deal with them from a secure position. The child will learn at an early age, not to absolutize pleasure and displeasure and to be so much better prepared for later life. But “A child’s independence is too big a risk for the shaky balance of some parents.”\textsuperscript{156} The more the parents depend on something, the greater the risk for them. Then there will be a strong polarization of the differences and a fight against each other, an either or that, a pro or contra, a black or white way of thinking, a win or lose behavior. The child then bites itself into the parents and these into the child. In addition, as I said, parents often transfer their own unsolved problems to the child. One parent may form coalitions with the child against the other parent, other family members may be involved, and so on. Processes take place which become even more difficult and inscrutable because they are hardly or not conscious of the person concerned.\textsuperscript{157} However it may have been, the child’s Self usually remains suppressed and enmity with the parents does not lead to real independence. The dependence of the child continues. That means that it leads to the same situation if the child makes whatever the parents want it to do, or if the child makes the complete opposite of what the parents want. The parents remain determining in both cases. However, the phase of rebellion represents a very important step in the right direction that sometimes takes place after many years (or never). Commonly, over-adaptation and defiance alternate with each other - a basic pattern that can be found again in future relationships of the affected people, unless they came to a deeper solution. Often, there will be also over-matched and opposite (pro and contra) parts

\begin{flushright}
\textsuperscript{155} “Normal” is strictly speaking “ideal”.
\textsuperscript{156} J. Greenberg, p 27
\textsuperscript{157} The Oedipus complex described by S. Freud is only one of many possible complexes. It arises when the mother and child are symbiotically connected with the father. It is normal for parents in early childhood to adopt certain absolute positions for the child. However, if they are divided into opposite (+/- or 0) positions, this is pathogenic. Fortunately, the influence of both parents already means a certain healthy relativization that facilitates the detachment of the child.
\end{flushright}
of the strange Self at the same time. 158
It is usually a matter of time until the strength of the child is not strong enough anymore to pay the constant tribute, although that may take multiple years. Whenever that point is reached, there will be a crisis that is explained in the next chapter.

Crisis and Falling III

„Each torpid turn of the world has such disinherited children, to whom no longer what´s been, and not yet what´s coming belongs.“

R.M. Rilke (Duino Elegies, VII,63-4)

The cause of the crisis is the conflict between the actual Self of the affected person and the requirements of the strange Selves, the conflict between the legit desires of self-determination and the opposite powers. Those opposite powers exist in the shape of real existent persons (usually parents) but also in the shape of internalized parts. That is, the person increasingly puts the strange requirements on him/herself because he/she considers them to be his/her own. The requirements consist of fulfilling the +sA and avoiding/ fending the −sA. The person is like a swimmer who has constantly to kick to prevent drowning. The main characteristics of the requirements are the many "musts" with the main requirements: You have to be good and you can’t be bad. 159 In these cases, it does not matter if what is considered good is actually good and bad is actually bad. Because even the real good can have become bad or ambivalent when forced. Likewise, real bad can be well experienced.

A crisis usually happens if the affected person is exposed to additional requirements. That may be bigger events (starting work life, unfortunate love, death or other traumas, etc.). Often, however, there are small triggers that cause the whole system to lose balance, and the crisis occurs out unexpected and cannot be explained.

E.g., experience of a schizophrenic patient: The “gods [+*] were laughing, golden personages … like guardian spirits. But something changed, and Yr was transformed from a source of beauty and guardianship to one of fear and pain [−*]. Slowly Deborah was forced to assuage and placate, to spin from the queen-

---

158 Most of the time one or the other dominates.
159 Our situation after we lost the paradise.
ship of a bright and comforting Yr to prison in its darker places.”

(See also ‘\textit{Reversal into the opposite}’).

This graphic illustrates the different phases of dynamics between the person (P) and dominating It/sA. Phase 1 on the far left shows how the person is “positively” interacting with the It/sA even though the person is already dominated by them: P fulfills the requirements of It/sA and receives an extremely strong positive feedback (such as recognition).

Phase 2 (illustrated in the middle) shows: It is getting worse whenever the demands of It/sA become too high and/or the person becomes too weak to fulfill the requirements - such as an imbalance of emotional distress and resilience. The affected person is now being punished by the It/sA.

Phase 3, on the right, is intended to indicate the dual role of the disease. It protects P against excessive demands. On the other hand, the affected person remains ill and allows the continuing existence of the It/sA.

The system decompensates whenever the requirements of It/sA are higher than the compensation forces of the I. More exact: whenever the requirements cannot be fulfilled anymore, or whenever threats cannot be fended off anymore - i.e. in the moment when the power of defense and coping are not strong enough anymore. But also, if the person does not want to fulfill the requirements anymore - and therefore causes a positive crisis! In this situation, the affected person is back in the old position of his/her childhood: He/she feels existentially threatened, it is about being or not being, Self or No-self. The old emergency-solution does not work any longer - especially if the parents (or environments) are themselves in a crisis because they are confronted with similar conflicts that seem to be indissoluble.

This dilemma can also be described as follows: On the one side we are in desperate need of love; But love also became very dangerous, almost deadly for us because parental love was connected to prerequisites or even exploitation. Therefore, many people seek love while they also fear and avoid it. With that, the person is stuck within a dilemma because he/she received a fearful, destroying love. It can be compared to a barefooted person that flees from the ice by running over hot coals and back to the ice again instead of trying to put on his/her own shoes.

All this leads to reenactments (inward and/ or in new relationships) resp. to a compulsion to...
repeat until the affected person finds a solution. It is as if the person has to find out if he/she is loved for him/herself or not, no matter what. The situation appears hopeless - but the person is adult now. Maybe he/she can find a deeper solution now. What solutions are there? We will find out in the chapters of therapy.

**PSYCHOSES**

**Psychoses in General**

Psychoses can be differentiated into three different groups: organic psychoses, psychoses of the schizophrenic forms and affective psychoses. This publication is mostly about affective and schizophrenic psychoses.

- **Affective** psychoses are separated into psychotic depressions and manias (manic-depressive illnesses).
- **Schizophrenic** psychoses (schizophrenia) will be discussed in more detail later on.
- **Schizo-affective** psychoses show symptoms of both groups.

These classifications are arbitrary from a certain point on - on the other hand, they reflect certain basic patterns that play a role in the therapy. But: “At the end of the day, every psychosis is different and has to be seen in its individual peculiarity, the social connection and with all its different subjective meanings. Every schematic view leads to standardized treatment. That kind of treatment is not reasonable for psychoses. People that have experience with psychoses are very sensitive and will react in an offended way if they are not seen as an individual person and not treated with the necessary respect.”

A psychosis is always an expression of a severe existential crisis, which may happen to every person. Usually, a lot of different and various factors have to come together to cause psychosis.

(In general, to causes see on 'Causes and Results' and further on 'Causes of mental disorders').

I believe that solving the "mystery of the causes of psychoses" is no more difficult than solving existential crises in general. I am convinced that every (psychogenic) psychosis is curable.

I summarize my hypotheses: Psychoses are usually the expression of an inner conflict of the person between opposing absolutenesses with a loss of actual Absolute. Such as it is with all the other psychogenic illnesses, there are two main conditions first: The absolutization of the Relative and the loss of the actual Absolute with the result of emerging of strange Selves and self-sacrifice to maintain these strange Selves. The person pays with his own health and the loss of actual Self to solve the conflict between the Self and the strange Selves.

To make it easier to understand the emergence of psychoses I want to remind you of the following:

The forces of the absolutized Relative and the oppression of the actual Absolute change the I especially in the following ways:

1. Mainly dividing and causing faults.
2. Mainly oppressing and causing deficits.

The mainly splitting forces cause schizophrenic, and the losses due to oppressive forces cause depressive symptoms.

The arbitrary differentiation does not exist in real life but is a way of making it more understandable. It represents the main-symptomatology of those illnesses. There is neither a solely schizophrenic pathology nor a solely depressive one. Therefore, the term of schizoaffective psychoses for mixed forms is plausible.

As mentioned, also Karl Jaspers already believed that the classification of psychoses in two main classes: manic-depressive and schizophrenic, contains an essential core of truth since this classification has asserted itself in principle, in contrast to previous terms of illnesses. I believe that this ‘essential core of truth’ can be explained by the above-described basic constellation and also by two fundamental forms of the negative (false and nothing). The two major psychosis groups, depression and schizophrenia, can also be understood as the main consequences of inversions of the Absolute and Relative: nothing (→ depression) and false (→ schizophrenia).

One could formulate, as in mathematics: A task can be solved falsely or not, i.e. the result can be wrong or it is missing.

In the case of the schizophrenic reactions, in particular, the divergent forces gain the upper hand, which causes in the center of the person splittings, contradictories, double bonds, pinch-mills, paradoxes, or the like. Especially the person is split, fragmented and torn apart in pro- and contra-parts. In the case of depression the s0-part mainly causes a central loss of the first-rate personal - or in case of mania too much of the "good" (*).

---

163 In this comparison one could call the + Absolute as the best common denominator, or the best "solver". If one done the Relative however to this denominator, then the problem is only relative or not solvable.
S. Freud explained that mental illness is a result of overpowering the Ego by the Id, which causes a separation of the outside world. Mania would be a fusion of Ego and Super-Ego and melancholy would be an oppression of the Ego due to a tormenting Super-ego. This view largely correlates with the concept presented in this publication.

The manifestation of a psychosis takes place if the negative forces of the strange Selves are stronger than the positive forces of the actual Self and other strange Selves. (Mind: the sS as a Relative has positive sides along with the negative ones.) It is easy to imagine and comparable to the loss of the physical balance, that the mental balance is endangered at a certain point. If you compare the strange Self with a crutch that is helping and obstructive at the same time, the ill person can also be viewed as someone who is trying to get rid of the obstructive crutch although he is not yet strong enough to stand without it. The concerned loses balance and falls down → becomes psychotic. Distinguishing between a progressive and a regressive psychosis, this is an example of a progressive occurrence because the patient is trying to do the right thing. It would be regressive if he does not want to use the crutch because of the overestimation of his own capabilities. The comparison of a strange-Self and a crutch also seems suitable when it comes to good therapeutic handling: It is not reasonable to take away such a crutch at any price, nor is it reasonable to take them for much longer than necessary. Contemporary, the second option seems to be the more problematic one because a large number of psychiatrists are too focused on the goal of symptom relief which causes them to forget that to much help (such as giving too much medication) can cause weakness of the person's Self.

The kind of sA resp. sS has also a main impact on what kind of symptomatic will be caused (schizophrenic, depressive or manic). Misabsolutizations that create a wrong, strange Self are more likely to be schizophrenic and such that cause the person to be in a deficiency or oppression are more likely to be depressiogenic.

As mentioned, the strange Selves become independent. They have their own structures and are like somewhat personal. Therefore, they are different than other volatile phenomena, such as single thoughts. Because of that, it seems obvious to view and treat them as dysfunctional metabolism or something similar to that. That thought is not really wrong but it is too superficial. To me, it is just as half-right as the thought that impotence is a circulatory disorder or a hormone disorder. We will also find such biological parameters while talking about psychoses. And I also believe that people will continuously find better drugs for psychoses such as there are for impotence. Why not? Without a doubt, a pill would be often a better option than the pain and sorrow without it. However: It is and will remain an emergency-solution. Impotence or psychosis would be gone, the main problems and reasons for it not. And they will always emerge somehow and somewhere. They only will be shifted to another place. And someone has to pay for it.

---

Overall, I view psychosis as a lifestyle in which the Relative dominates the actual Absolute. The not actual dominates the actual, the splitting dominates the wholeness, the object dominates the subject, the non-personal dominates the personal, the strange dominates the own, the second-rate dominates the first-rate, the functional dominates the lively, the strange Self dominates the Self and the strange-I (Ego) dominates the actual I.

**Schizophrenia**

**What is Schizophrenia?**

One assumes that about 45 million people suffering from schizophrenia. The World Health Organization (WHO) rates schizophrenia as one of the most expensive illnesses worldwide.

It is hard to explain what schizophrenia is because the one schizophrenia does not exist. What is meant with the group of schizophrenia is also an agreement. There are international committees of psychiatrists that listed certain symptoms as signs of schizophrenia. However, it is against human dignity to refer to people as hebephrenic or psychopath or similar. Those terms make it seem like the negative symptoms define the whole personality of the affected person. As Karl Kraus said: "One of the most widespread diseases is the diagnosis.”

But what is meant by the term 'schizophrenia’? How do the affected people suffer? What are the symptoms?

There is a great variety of descriptions of schizophrenic people's experiences. I think the following examples are more impressive than some psychiatric textbook: Joanne Greenberg's “I never promised you a rose garden”, and Marguerite Sechhaye's “Autobiography of a schizophrenic girl”. Those accounts describe the feelings, experiences and thought of schizophrenic people in a way I could not describe it. They report how the affected people lost their footing, stability and confidence, how they desperately strive not to go down or not to break or to implode, not to fuse with someone or something, not to be overwhelmed by foreign, uncanny powers, to feel that not only the inside but also the reality is odd changed, and thoughts and reality cannot be separated.

Delusion and Hallucinations will be discussed later on.

A list of all possible schizophrenic symptoms can also be found in the ‘Summary table’ columns T, U and V.

---

165 'Der Neurologe und Psychiater’ 11/04.
A New Psychodynamic Theory of Schizophrenia

Inversions as the Main Cause

“But we cannot give an adequate account of the existential splittings unless we can begin from the concept of a unitary whole, and no such concept exists, nor can any such concept be expressed within the current language system of psychiatry or psychoanalysis.” R.D. Laing 167

“All evil is isolating ... it is the principle of the separation.” Novalis

Hypotheses
• The most frequent primary (!) causes of schizophrenia are Inversions by dogmas.
• Any Inversion can cause schizophrenic symptoms. That means that especially all strange Absolutes (sA) are potentially schizophrenogenic.
• Any second-rate system, such as P², has latent, or even obvious schizophrenic characteristics (e.g., it is more or less divided.)
• Causes of schizophrenic symptoms are often outside of the affected person.
• The well-known theories about the causes of schizophrenic psychosis are easily integrated into the present work.

For the main hypothesis: 'Any inversion can cause schizophrenic symptoms', I have to ask the readers to look at the `Summary table`, which can be found either on the network or as an attachment or as a PDF file.

(In general to causes see on `Causes and Results`, further on `Causes of mental disorders` and on `Psychoses in General`. To guarantee a better understanding of the emergence of such a disorder, it is recommended also to read the chapter “Spreading and compression” in ‘Metapsychiatry’.)

If a Relative irrupts into the absolute sphere of a person it becomes a strange Absolute (sA). At the same time, there is a loss of first-rate personal. Metaphorically speaking, the Relative overthrows the Absolute from the throne. By the loss of the Absolute, the integrating meta-level disappears, which cannot replace by something Relative, so that alienations, displacements, ruptures, madness, etc. can arise.

The resulting sA resp. It has not only in the sphere effects which has been absolutized but it also affects all other aspects in its sphere of influence.

There are also corresponding parallels to other disorders: If almost anything (albeit with varying probability) can make a person anxious or depressed or even addictive, why should not the causes for schizophrenic symptoms just as manifold?

However, I see the following specifics regarding schizophrenic symptoms:
• The affected person experiences the causes and results as determining.

167 R.D. Laing, The Divided Self, p19
• ‘Schizophrenia’ (as the main term) includes especially the spiritual-mental dimension of man over more or less all aspects.

• Especially those It/sA will be acting schizophrenogenic which have a completely different or even opposite meaning to the originally Relative, which was absolutized (for example, when something relative positive is negatively absolutized and reversed). They can be found in the ‘Summary table’ Column ‘I’ usually in the middle line of the cells. It/sA with all-or-nothing character (= hyper or 0) have especially manic-depressive effects.

• A meta-position is lacking for those affected, which relativizes these contradictions. For this reason, there is no possibility of overcoming and solution of these contradictions.

• The It/sA-effects are stronger than first-rate (or second-rate) compensatory forces.

• Usually, the surroundings are caught in the same or similar contradictions, which then may transfer.

Affected children experience their surroundings, especially their parents, with second-rate characteristics, such as they are listed in the ‘Summary table’ in column I and K.

• The schizophrenic It/sA must act over a longer period so that the initial absolutized mental position has been materialized and has become independent.

These characteristics explain why schizophrenic symptoms and no other symptoms usually occur, although inversions are ubiquitous.

Do the affected, which are involved in such contradictions and paradoxes, see so wrong about the world? Does somebody see it more correctly who tells us that the world is fair, unambiguous, logical, clear and not contradictory? Our affected families or patients certainly see the world more realistic when they see them full of opposites. Their "mistake" is only that they take that not relatively but absolutely.

For the causes of schizophrenic symptoms, I also refer to the beginning of this chapter (→). There is not the one cause for schizophrenia. The causes for these symptoms are as varied as the individuals which were affected by them. Manfred Bleuler sums up: „Decades of research has not succeeded in proving just one specific cause of schizophrenic disturbances. Today we are ready for the thought that there is possible, not such. Rather it has become clear, how manifold disharmonies that disrupt personality development form the predisposition to schizophrenic illness.”

As described in the part ‘Metapsychiatry’, one can see the mentioned ‘ideologies’ as a starting point for inversions. This leads to reversals of fundamental meanings, which are

---

168 The theoretical questions of causality see the called links above.

It seems to be important in this context for the therapy, that each individual, so also the patient, can become the primary cause of positive changes and thus break through existing chains of causality.

solidified by a multitude of "Its". These Its are generating centers of second-rank realities in the world, in the person and in the I (WPI). Each It changes more or less all aspects ('spreading') with one 'main impact direction' each. Although the main impact direction of the particular It essentially determines which kind of symptom group develops, on the other hand, manifold symptoms can be produced by each one of the Its. Viewing from the symptom, this means that every symptom can have a variety of causes. In terms of schizophrenia, this means that there is not the specific cause for schizophrenia but that multiple factors must come together for this or that symptom group to arise. This also corresponds to the clinical experience and many theories of schizophrenia development (see later). As I said, in my opinion, a common denominator of these different causes is that they all invertingly act. I listed all sorts of schizophrenic forms and schizophrenic functional and quality disorders in the Summary table (see the last 3 columns). They correspond in many respects to the symptoms stated in the literature but are listed here systematically according to my classification.

I have tried to make plausible the common of the schizophrenia causes in these statements. Probably everything can make us crazy or split if it is not taken any more relatively but absolutely, and I have tried to illustrate with the concept of the strange Self (resp. It) most different of such absolutized forms with her main results. As said, it seems that in this model most of the numerous theories of the origin of schizophrenic reactions have a place. But one should see them not alternative but in addition.

I believe that only disturbances of the absolute sphere of the human being (the self) can cause psychoses, because as long as the causes and the disturbances are only of relative importance, a mental disorder, or even psychosis, will hardly be able to manifest itself. On the other hand, if we look at the enormous integrative power of the actual Self (resp. +A), which makes people identical, valuable and free in every situation, this basis is probably the strongest force against any kind of psychosis, and we should beware of ideology-based models and therapies, because they basically do what the patient does with himself - they create new preconditions for his existence.
Table Example: To the genesis of fusions and splittings

</table>

This chart outlines parts of the "Summary table". The first column represents a selection of well-known ideologies, the second column refers to possible, individual attitudes that correlate to these ideologies. All attitudes have inverting effects - one main effect in the
main aspect and many side effects (‘spreading’) in all other aspects. In the example above, I consider an inversion in the aspect a4 that mainly affects this particular aspect but can also cause disturbances in other aspects. In this example, it means that social or individual ‘monistic’ or ‘dualistic’ attitudes, (such as everything-or-nothing, friend-or-enemy attitudes) can not only cause disorders of unity and variety but can also lead to disorders of identity, reality, security, freedom and so on.

But the inversions of other aspects can also lead to these schizophrenic symptoms ("compression" from the 4th column to the right). In our example, they lead to disorders within aspect a4. This means, that not only the inversion in aspect 4 itself can lead to disorders of unity and variety but also inversions in other aspects can cause disorders of unity and variety, more precisely: disorders of personal unity and variety (column T), functional disorders such as fusion and separation (column U), or quality disorders (column V) such as autism, ambivalence, splitting and contradictions.

Schizophrenic Symptoms and their Meanings

Once, a snake came into my heart,
it had two heads, a black one and a white one.
And each head was telling the opposite of the other.
Both were speaking the truth, but the center of their words was a lie.

General Information about Splittings (Partly Repetition)

Here are some notes:
A ‘real’, actual wholeness/unity cannot be divided. (See motto by R.D. Laing above). I.e., if the subject (resp. person) is connected with the +A, which can integrate all objects, also the negative ones, then no permanent subject-object- or other splittings can occur.

Schizophrenia is a mental breakdown = "Zusammenbruch". The German term reflects two typical features: `zusammen´ (‘fusioned’) and `Bruch´ (‘split’). Inversion causes our souls to become divisible and fusionible.

Splitting affects the whole absolute-sphere of the person as a result of an experience of absolute opposites.

Within the relative-sphere, I only will speak of differences, divergences or polarities.

In the following chapter, I will discuss mainly the phenomena of splitting and fusioning. They stand exemplary for other schizophrenic symptoms.

Spheres of Splittings

Inversions may cause splittings within all aspects. One may differentiate between:
A: Splittings in the dimensions-spheres
B: Splittings in the differentiations-spheres
To A
1. The absolute split between +A and −A.
2. Splittings between A and It resp. between Self and strange-Self.¹⁷⁰
3. Splittings within an It into its parts: pro-sA, contra-sA and s0.
4. Splittings within an It-part into one of its three sides (+/−/0).
5. Splittings between the different sA/sS.

To 1) In my opinion, the split between +A and −A is the only absolute split. But you must believe in the existence of +A and −A.

To 2) In relation to the person, the splittings concern the Self and the strange-Self(s). The affected person experiences a contradiction, splittings of the actual Self and the strange-Selves. That contradiction is not absolute because Self and strange-Selves coincide in some parts. Yet, that contradiction will be experienced as absolute. Due to the strange-Selves, the person will be ‘de-individualized’ and the individual (literally: the indivisible) will become divisible!

To 3) The third area of splittings exists within the opposites inside of the It resp. the strange-Self itself in the splitting in pro-sS, contra-sS and 0S (or: +sA,−sA and s0; Example: ideal*, taboo* and 0*).

For easier understanding, I recommend taking a look at the chapter ‘The emergence of the It’ again.

There, I describe the structure of It. The It is made of two/three contrary, yet fixed connected parts, which are the starting point of splitting- and fusion phenomena of different illnesses.

To 4) The 4th splitting possibility arises when one of the three sides of an sS is opposed to another. (This would be the case, for example, if the advantages and disadvantages of an absolutized object were the same.)

To 5) The 5th sphere of splitting develops if two or more strange-Selves are contrary to each other.

¹⁷⁰ In the person I call the It also as a strange Self.
To B For example
subject-object-splittings, matter-spirit-splittings or soul-body-splittings, or splittings of
different realities and people

All of these possibilities of splitting (fusions) exist within the person as well as towards his
environment!
Everything, that enters the core of a person and is not the Self, will decay, break apart and
therefore causes a splitting or fusion of the person. We all live in a world that is more or less
divided (or fusioned) and whoever internalizes these splittings/ fusions of the world without
being able to process or integrate it, will be divided/ fusioned as well. (O Splitting and/or
fusion phenomena otherwise.)

**Splitting and fusion phenomena otherwise**

- Social, family, divorces / symbiotic relationships
- Other diseases (e.g. dissociative identity disorders, multiple personality disorders,
anorexia/bulimia, dyslexia, stuttering - from a certain point on for most mental illnesses).

Parallels to Physics?

We already established, that there are similarities between the rules/laws of second-rate
realities (such as in $P^2$), and the laws of physics. That also applies to the impacts of pressure
on an object or splitting of an object. In both cases, there are both fracture points and
compression points (~ fusions). In some cases, the fractures predominate, in others the
compressed. One may even see the third result between the divided parts: the nothingness.
Perhaps there are parallels of second-rate dynamics to physical processes such as nuclear
fusion or nuclear fission.
The chaos theory describes chaotic conditions which also represent an analogy for psychotic
conditions.

Autopoietic system theories also describe bifurcations resembling splittings in $P^2$.

**Opposites in Schizophrenia and their Dynamics**

Here, using examples of splitting- and fusion-phenomena, representative of all other
opposing phenomena.

As generally described in the dynamics of second-rate realities, opposites are
interdependent and have a particular dynamic: one part generates or fights its opposite,
both associated with the loss of first-rate reality.
(See also 'It-parts as opposites, fusions and negations' and 'Possibilities of interactions'.
We can find the same in schizophrenia.

More precisely: Similar to the second-rate realities, schizophrenic people lose due to the
It/sA their original unities and connections: the connection between A and R, between mind
and matter, between person and thing, subject and object, but also between different
persons.
But opposing phenomena can also arise: mergers, one-sidedness, false connections, etc. In this case, the diversity of various units is lost, such as those of different persons, different things, mind and body, subject and object, etc., or they are reversed. Thus, people often become more like things, things become more like persons, subjects become object-like and objects become subjective.

The primary identity of different people and different objects will eventually be lost.

Schizophrenic psychoses often develop in families that either have strong tendencies of fusion (symbiosis) or they are very divided or both opposing tendencies can be found side by side. The index patient either takes the pro-side, the contra-side or will be torn apart between those two sides. This person usually has no clear position of his own (no actual Self) and still needs an old position to guarantee psychic stability. But the more this position is overtaxing the affected, the more he will be forced towards the contra-position, or he will alternate between the two positions or becomes divided. In the meantime, the 0-position can be chosen as a balance between the opposite positions, but of high costs, too.

R. D. Laing: "Therefore, the polarity is between complete isolation or complete merging of identity ... The individual oscillates perpetually, between the two extremes, each equally unfeasible. He comes to live rather like those mechanical toys which have a positive tropism that impels them towards a stimulus until they reach a specific point, whereupon a built-in negative tropism directs them away until the positive tropism takes over again, this oscillation being repeated ad infinitum." 171 And Manfred Bleuler pointed out that autism and split are two sides of one psychological process. 172 All of these reactions are associated with deficits of first-rate reality and personality.

I believe that the extreme introversion in autism or schizophrenia is an act of protection to guard the personal core from splitting or decay. Since the affected person has a weaker Self, every additional pressure threatens to destroy the remaining Self too. The person is caught in a vicious cycle of splitting- and fusion tendencies and cannot escape. (‘Psychical Bermuda Triangle’). He may find some sort of balance between the two sides but that balance is of the very high cost. It will be very hard for the person to forgo that balance (although which would mean to can lose his symptoms) because as soon as he wants to get away from one side, the other side will threaten him. The threat will be experienced as existential. The affected person believes that he will die if he tries to give up the balance between the dividing and merging positions. Why? Because the person identified himself with the underlying sA, even though that sA is the reason for the splitting and the autistic reactions. To lose the sA and the symptoms, the person basically has to let the sA "die". However, since the person identifies himself with the sA, he will experience the ‘death’ of the sA like his own death. The person will not take that risk, especially not as long as he can not find a stronger Absolute.

Not only division and fusion can create an expensive balance, but the pro-and-contra positions (↔) of all personal aspects, especially those that lie on the same aspect level.

Here are some examples:

- strange-I ↔ loss of I
- splitting, isolation, ‘explosion’ ↔ fusion, compression, ‘implosion’
- chaos ↔ inner constraints, automatism
- peculiarity, specifics ↔ no individuality
- ecstasy ↔ lack of emotions
- hallucinations ↔ inner emptiness, isolation
- symbolized, encrypted topics ↔ concrete simplified topics
- closing, isolating ↔ opening, exposing
- insensitivity, petrification ↔ sensitivity, pain
- reification ↔ liquidation
- bizarre topics ↔ amorphous topics
- emptiness, inner poverty ↔ heaviness
- weakness, powerlessness ↔ false potency, feeling of almightiness
- sense of inferiority ↔ megalomania
- fixation ↔ instability, dissolution, shifting.

It is not only schizophrenia itself but also single symptoms that can be interpreted as positive sometimes. They may occur as part of a progression as well as a part of regression.173

**Shifting and Fixation**

Everything that I mentioned regarding the opposite-pair 'splittings and fusion' also applies to 'shifting and fixation' because splitting always goes along with shifting and fusion with fixation. The affected person is therefore not only divided and/or fused but also shifted and/or fixated. We are all not only somewhat split or 'compressed' but also shifted (crazy).174

The clinically shifted/ crazy person may have adapted himself to our craziness and was not able to deal with them. (See also in the bibliography on this issue the publication by M. Siirala).

As mentioned above, one may find certain opposite-pairs and their symptoms throughout all aspects.

173 See also the theory of ‘positive disintegration’ of Kazimierz Dąbrowski with which I partly agree.

174 The graphic in chapter "Fear" should illustrate how the SA / It displace (make crazy) the person.
Paradoxes and Schizophrenia

Like schizophrenia, paradoxes arise from contradictions within a system that has no meta-level - ultimately caused by ‘inversions’.

One may also say: **Whatever causes paradoxes, may also cause schizophrenia.**

In their characteristics, paradoxes (as well as schizophrenia) show contradictions/ambivalence on the one hand and the indissolubility of those contradictions on the other hand. In addition: A characteristic of schizophrenia is its inherent paradoxes, which the person concerned cannot resolve.

The solution for both consists in the introduction of a meta-level that can relativize or resolve the contradictions.

By the way: our world is more or less ambivalent, ambiguous or even contradictory and paradoxical. The paradox is also, that interpretation and counter-interpretation often appear equally true. (See also Chapter ‘To the emergence of paradoxes’.)

Further Thoughts on Schizophrenia

After inversion, P² will live on many different foundations. The affected individual will experience those foundations as contradicting, ambivalent, incompatible, not capable of being integrated and therefore unsolvable.

The really relative limits become absolute and will be experienced as insuperable („fehlender Überstieg“ Conrad). In itself, the Self (as well as God) compensates for all contradictions and opposites, but the sA does not. While the person (P), who is based on the actual Self, has no problems cooperating with all the different areas of life and always remaining himself, now, strange foundations make P opposite and crazy. The strange Selves of these people are sometimes like wolves. They are distrustful and lonely but in a pinch, they will stick together. They are not friends but fellows at most or conspired communities. They quickly have common enemies, but also quickly get into hostility with each other. Or they are like helpless lambs. They can never rest because they are constantly being haunted. They have to escape and overcome different obstacles. Or they have defective or contradicting views and behavior according to that sS on which they depend on. Therefore they act in ways that cannot be understood by others. Or they are forced into further roles by other strange-Selves.

And is the I once it is itself, an I-self, then it is still uncertain in view of other positions, "is it really me or not"?

---

175 Pictures of schizophrenic artists are usually without horizon (“missing transcendence, meta-level). See, e.g. Leo Navratil: *Schizophrenie und Kunst*, dtv, München, 1965.

176 ~ „missing cross over“
The schizophrenic patient is lacking the self-evidentness. The individual does not experience himself nor the world as self-evident. The 'schizophrenic' lacks a Self that protects him, gives him identity and integrates everything negative. Since P is identified with a number of different objects or other persons, he is very dependent on them. He can see the same thing completely reverse or distorted and crazy, depending on which strange Self dominates him. The person concerned can, as one so aptly puts it, no longer deal factually with these or those things and problems. He takes it personally. The centers, the strange Selves, of these persons, are weak and heteronomous. Their limits are perforated.

The graphic in the chapter 'Vulnerability-stress-theory' shows how the self area, which is in itself unassailable, becomes vulnerable to the strange Selves. The person does not give priority to his own Self but the strange parts. Those strange introjects receive the status of a subject, become quasi-personal, and the Ego becomes a passive and assailable object. No wonder that the person concerned delusionally reacts or hallucinates in this situation. Since the strange has established itself in a dominant position, the person also feels how these foreign powers dominate him, how they do something to him, as an object, pursue him, observe him, or even talk to him. As inexplicable as these phenomena may seem, at first sight, they become understandable when we consider the role of the strange-Self (sS) because the strange-Self was personalized while the I-self was depersonalized. If, for example, parents or what they represent are absolutely taken, the child will develop structures that conform to the absolutized parental parts, which now (quasi-personal) take on some sort of subject-role. They act as subjects and will also be experienced as such. Therefore, there are many affected people that are able to assign voices to specific people. The sS becomes a quasi-personal foreign body that is also able to 'speak'. One can also say: a strange Ego speaks of an sS basis.

There are many more phenomena caused by the mentioned sS resp. It and are noted in the Summary table column T-V. Therefore, I will not list them again at this point. Of course, the actual occurrences are barely as simple but I think in principle plausible explicable, and it's amazing why schizophrenia is still considered as a total mystery.

Regarding the causes of schizophrenic reactions, I recommend looking at the chapters 'Causes of mental disorders' and 'Mental disorders from the biographic perspective'.

If we read these sections from the point of view of splitting phenomena, we find that the most frequent and typical genesis of schizophrenic reactions is the following "story": The most important reference persons (mostly the parents) of the later ill individual are sS-determined if they are apparently ill themselves or not. These strange-Selves of the most important persons add up in their effects. The child is confronted with different absolutized

---

177 W. Blankenburg called the 'loss of natural self-evidentness' as a sign of schizophrenia (1971), but that affects us all since we have lost the paradise and not just 'schizophrenics'. As a sign of schizophrenia, one should only ascertain a predominant loss of natural self-evidentness (corresponding to a predominant loss of the first-rate Self in the sense of this work).
positives (+*) and negatives (-*), with things they have to obey and things they have to avoid. The core of this child will depend on if it obeys or avoids the specific subjects. The actual Self of the child, that mainly wants to be free and independent, has to subordinate itself and will be forced aside. This is the main splitting. Surely, we all have such splittings within us. They will have a more negatively effect, the more the actual Self will be forced aside, the less the child is itself but has to be strange-self. The parents barely ever deal with such a process consciously, which does not mean that the parents do not make conscious mistakes. As already said, they are very often strange-determined themselves but either they have enough own Self still not become ill or they can compensate the sS-parts somehow or live with another emergency solution (that will be discussed later on). As long as the child takes over (mainly unconsciously) the strange-Selves of its parents, existing splittings or other symptoms will not be as noticeable as at the point where the individual tries to live more out of its own actual Self-basis. That point can also be later on in life when the child is all grown up. Then, the affected will stand in distinct opposition to his outer and inner strange-ideals* and strange-taboos*. The contradictions will be experienced now as full of tension or even highly existentially threatening. That is a very important point: Even if the situation seems to be easily manageable, the personal experience is very otherwise because the affected person (P) perceives it as absolute. P will feel as if it were a matter of life and death. While some people, who are a little more fortunate find a solution, others do not. The tensions and splittings threaten P to tear apart. As mention in the paragraph 'solutions', there are different possibilities now. In our case, the individual will become ill (which we refer to as Emergency solution B). That means, that the person takes a compromise (alternative) as a solution, which relieves him to a certain point but is also of high cost: the price is his health.

People with psychotic reactions, or mental illnesses in general, often want to live deeper, want to live their own lives. Therefore, it seems important to me not to regard mental illnesses only as something negative, because even if the individual tries to do the right thing - for example, to part with his parents, he can become ill. Even though we all have latent schizophrenic phenomena within us (according to my theory), not every person will become clinically schizophrenic. Why not?

For one, extent and nature of the sS play a big role. Then, whether they tend to weaken or intensify each other's effects. I believe, schizophrenic phenomenons will be experienced, above all, if the person dares to venture into the tension between the actual Self and the strange-Selves. The sick person experiences the sS resp. It as 'gilded cages' and wants to escape somehow. (Mostly unconsciously.) He tries to change his basic life foundations, his strange Selves because the old ones increasingly constrict him. He tries to cross the border of the strange-Selves but the danger is: He falls in between the chairs or will be torn apart. He could make it simple and just sit on the old sS-chairs. Then P wouldn’t become schizophrenic but would pay the price of a second-rate, over-adapted life. It seems like many people decide on that. But some affected people prefer a divided life that is at least halfway real and maladjusted compared with a life that is all the way adapted and inauthentic but
then they risk a crisis.
I believe that many clinically healthy people have more inner splittings or similar phenomena than those who are diagnosed as schizophrenic because they solve it in an easy and comfortable way with being adjusted. Even though they prevent their own manifest disease, they will become some sort of transmitter of the causes of illness. I do not want to condemn this, but I want to show people with psychotic reactions, that they might be more courageous (even if unhappier) than some so-called healthy people. They are often more honest in a frightening, but also a self-destructive way. Frightening for us so-called normal people, who barely dare to face the lies of our lives and the heteronomy. The clinically healthy people are therefore not automatically less crazy, they only suffer less. R.D. Laing said: “Thus I would wish to emphasize that our 'normal', 'adjusted' state is too often the abdication of ecstasy, the betrayal of our true potentialities, that many of us are only too successful in acquiring a false self to adapt to false realities.” [R.D. Laing in ‘The divided Self’].

On the other hand, psychotic reactions can, of course, also occur in a regressive way. While the above-mentioned people tried to jump into life but crashed halfway, others are running away from a life that seems unbearable. A psychosis can, therefore, arise both, when moving forwards (‘progressive’) or backward (‘regressive’) since the future is unknown and insecure or past and presence seem unbearable. Often the stalemate situation appears to be the safest. But it is too much to die and too little to live.

Schizophrenia can be described as life in conflict between the actual Absolute and the Relative that seems to be absolute, as live between the Self and strange-Selves or between different strange-Selves themselves.
It is a suffering from contradictions that is experienced as unbearable for the person concerned. This fact can only be explained by the assumption of disturbances in the absolute realm in the person because there are no relative fragmentations. Those affected try to live on two or many bases, two or many Absolutes. They are chronically desperate and undecided. They live in an existential dilemma.

I think also, we tend to overemphasize the differences between the different mental illnesses, while not seeing the common in depth, like the strange-Selves.
I also have no problem to see direct parallels of schizophrenic psychodynamics and corresponding external situations, such as those of divorce - only with the difference, that in case of schizophrenia, the ‘divorce’ takes place inside and the schizophrenic person cannot separate completely from himself, although he tries. By the way: I would give a human in divorce and a human with schizophrenic reactions medication only if they could be overwhelmed by the respective suffering, but not as self-evident "relapse prevention" from

[178]

1. "The desperate is like a wave, which is driven by the wind back and forth. He is a man with two souls." (James 1: 6,8).
2. I have, as I said, placed the symptom of ‘splittings’ in the center of this article because it gave its name to schizophrenia - it is, as the Summary table shows, by no means the only and most typical symptom of schizophrenia.
the outset.
I also want to point out, that I do not think that the elimination of schizophrenic symptoms is the first and most important step of therapy. Above all, the therapist should accept the patient with all his splittings and unsolved problems. Symptoms are not the absolute bad, just as health is not the absolute good. By not giving absolute significance to schizophrenic symptoms, the therapist does not cause any additional disturbances that would otherwise occur. But also the relativization of symptoms is not of absolute importance and does not guarantee their cure but the chances are much higher.

Finally, the positive sides of the schizophrenic symptoms should be pointed out once again. Here, they shall be named only as keywords and hypotheses:

With psychoses, the patients defend their remaining parts of dignity, freedom, individuality and self-determination, albeit at the cost of giving up part of themselves. The disease is both protection and self-abandonment. “You know, the thing that is so wrong about being mentally ill is the terrible price you have to pay for survival.” - so it says in 'I never promised you a rose garden'. Or as a patient of Luc Kaufmann said: “If I woke up I would die!”. On one side, it will be good if doctors and patients respect this psychotic defense but on the other hand, the question remains whether the patient cannot do without this expensive protection. Therefore, I present the psychotic reactions, like mental illness in general, to the patient as an 'allowed emergency solution'. With that, the patient has the opportunity to allow that option without feeling guilty but one should also always questioning the necessity of that very expensive protection. The same applies to medication protection. Psychosis is not only emergency protection but also offers an emergency solution in all other personal aspects: it can give substitute individuality, substitute dignity, freedom, variety, order, reality, past, present, and future. It can give substitute communication, substitute well-being and all other positives of the second-rate reality. Better an expensive alternative than a total loss of Self. Thus the disease can become an emergency rescue of the Self.

**Accordance with Other Schizophrenia Theories**

Do not all common concepts of schizophrenia have a certain rightness? At least in the sense by describing many different possibilities of causes of schizophrenia. I can integrate most of the theories into my concept without any problem i.e., with the concept of inversions with their It/sA, I am trying to find a common denominator.

The known schizophrenia theories emphasize the following factors as the cause of schizophrenia:

- Genetic factors (estimated too high in my opinion).
- High-expressed emotions (HEE) (G.W. Brown and others).
- Double-bind-theory (Gregory Bateson).
- Entanglement (S. Minuchin).
- 'Delegation' and 'impossible mission' (H. Stierlin).
- 'Paradoxes' (M. Selvini Palazzoli).
• Pathologic narcissism and contradictions based on internalized object-relationship (Kernberg).
• Ego-weakness, often emphasized by psychoanalysts.
• In older literature, the question of broken-home-situations played a very big role, without finding specific results.
• Schizophrenic mothers (Frieda Fromm-Reichmann)
• Social isolation, especially emigrants seem to have a higher risk of getting schizophrenic (Scheflen).
• Vulnerability-stress-model.

In the following paragraph, I will compare these most common theories with the hypotheses of this work: the vulnerability-stress-theory, Kernberg’s hypothesis and the double-bind theory.

Vulnerability-Stress-Theory

“Authors such as Zubin and Spring, Ciompi and Nuechterlein all used the vulnerability-stress-model to explain the multifactorial psycho-social-biological development of schizophrenia. People at risk of schizophrenia ... show a particular vulnerability and sensitivity which combined with stress and social or physical strain - can lead to an outbreak of psychosis.”

Typical for any schizophrenia is “a break-in of something exterior and foreign into one’s own experience which means a deep disorder of one’s personal identity with the blurring of one’s ego boundaries and the abolition of the clear difference between inner and outer reality”. (Ciompi, p. 272).

With the following two pictures I try to explain these views with my theory.  

180 An overview of the numbers of the named psychical aspects can be found in the ‘Summary table’. 
Fig. The stress-vulnerability concept applied to my concepts.

Note: The vulnerable spheres are also spheres for manipulation and spheres in which overstimulation can take place because the external stimuli can freely penetrate into the self-area. In the Summary table, this topic is shown above all in the row of Asp. 23.

All psychiatrists agree that many factors must come together, that are also rather unspecific by themselves.

It is probably a mistake to find the one cause, especially since there are not one but many forms of schizophrenia, which also differ individually.

Note: The so-called 'Demands and Capacities Model' (explanation for stuttering) is very similar to the vulnerability-stress-model.

Kernberg's Object-Relations Theory

Kernberg's theory of the confusion of self- and object-representations and the related lack of distinction between inner and outer worlds can be explained by the above right figure. It is illustrated how absolutized objects of the world penetrate the self-sphere of the person, become strange-Selves thus disturb the differentiation between one's own Self and the strange objects, or the inner and the outer world. Ciompi also describes the blurred borders between self-representatives and object-representatives and the connected problem of schizophrenic people to differentiate between the inner and outer world.

In the Summary table, this topic is represented particularly in row IV (subject-object relations).
Double-Bind Theory

The double-bind theory is G. Bateson's theory of schizophrenic disorders, presented as early as 1956.

In the following paragraph, I describe the double-bind theory using information taken from Wikipedia. It will be shortened and written in italics, and I compare my corresponding hypotheses in this regard in square brackets [].

“The classical double-bind theory describes the following requirements for a double bind to take place:
A primarily negative commandment or prohibition that is essential for survival and incompatible with a second essential commandment, and a third commandment that prohibits the victim from attempting metacommunication and makes it seem impossible for him to leave the conflict. These conditions are usually internalized and a self-runner.”

[This theory is largely compatible with my concept: it emphasizes the absolute character of that which binds twice, the incompatibility of commandments with one another, the impossibility of the person concerned to resolve these contradictions, even if they could objectively be solved and that it is impossible for the individual to solve them due to subjective reasons because they have acquired an absolute meaning and a relativizing meta-level is missing.]

"The main difference between a [relative] contradictory and a paradoxical rule of action is that in the case of the former, one can consciously perceive and choose the alternatives. Although one loses with the choice of an option the other option, but one consciously accepts its loss. "(Which is not the case with the paradoxical rule.)
[Here, the loss of the option to choose in a paradoxical situation is rightly mentioned because the individual has no superordinate Absolute which would allow the choice of option. Instead, the differences are absolute.]

“The double-bind theory considers two levels (at first): A dominant parent and the dependent child. A third, superordinate level, such as social norms, ideals, or goals, to which the dominant sender of the double bind message feels committed, is not considered at first. However, such a third superordinate level can be found in the Stanford-Prison-experiment and in the Milgram-experiment.”
[The necessity of considering a third, superordinate meta-level is mentioned here. That also means considering an absolute sphere in which the “offenders” are also captured.]

“There is ... a wide field of potential contradictions that are not really contradicting itself on the level of logic. The real determinant is ... the subjective excessive demand in the awareness of the child. A certain problem may overtax the child but as long as the child must not solve the problem, the child can look at the problem with a relaxed interest, and will

learn from the situation.”

[With those statements, the classic double-bind theory is expanded to all the problems or contradictions of the individual that seem to be unsolvable, which coincides with my hypotheses.]

Regarding the pressure to adaptation and the self-image:

“...in double-bind relationship patterns, the kind of influence also includes the kind of self-perception the victim has for itself.”

[Important reference to the disturbance of the victim’s identity whereby not just the identity but all psychical aspects are disturbed. And the causes are not only double binds (or splittings) but all inversions.]

My concept confirms and extends the double-bind theories.

In detail:
- The counterparts of double-binds are double-splittings and lack of ties. They are the other It-effects (when the It is a triad); i.e., there can be two, or three different effects of the same It/sA.
- Double bonds/splittings can occur if the solution of an inversion is forbidden or impossible, as it is of absolute importance to the persons concerned. Uncovering of fundamental errors in the system is banned because it would plunge the system into crisis, and system members therefore believe that their common Absolutes must remain in all circumstances.
- All inversions can have double-bind, multiple-bind, -splitting or deficit effects.
- Even one single It/sA may cause double-binds or double-splittings or deficits.
- All P² can be the cause, as well as the target of those double-effects because every P² is dominated by It/sA that can have contradicting effects. But keep in mind: the whole P does not only consist of P²-parts.
- If people live sA-determined (= P²), they send double-bind messages.
- Every (absolute) bond is also a discrepancy of outer or inner necessities and the inner need for freedom.

Note: With terms such as double-bind or double-message, also paradoxical binds, predicaments, dilemmas, traps and so on can be described. When S. Freud stated, that these are the results of “two opposite affective reactions or drive reactions where one of them is a partial drive” and “the other one tries to prevent it” and that this is absolutely typical of neurotic symptoms, then the similar is said - as is also the statement of H.F. Searles that one cause of the double-bind is, “that one is in the same relationship with the other on two (or even more) different levels at the same time, that do not have any kind of connection with each other. This has the tendency to force the other person to dissociate his participation from one or other of these levels (possibly both) because he finds it inappropriate to refer to a particular level if it has no relation whatsoever to what is going on at the other level ...". 
Searles describes how a very attractive and provocatively dressed woman made him nearly crazy by a sterile discussion with him about theology and philosophy.\(^{182}\)

- Double-binds/splittings may also occur if they originate from two contradicting sides of one part of an It (e.g., a front side and a reverse side). But because they are based on the same part, it falsely seems like they cannot be contradictory. A second possibility: A part and the opposite part state the same thing because the reverse side of a part and the front side of the opposite have the same connotation.

- There are 1000 causes that may lead to bonds or separations or deficits of two (or many) people, as well as 1000 causes that may lead to bonds or separations or deficits within one person. In both cases, many different possible causes, that may lead to one very specific but individual various result. (s. Spreading and compression).

**Examples:**
- Mother and father take an absolute position for the child. This creates a double bond: The child must follow both mother and father, although they are different. But this is also a splitting of the childish image of the parents and the truth, which states that the parents are not of absolute importance.
- Analogous example: Mother is the good, father is the bad → bond, splitting and trap for the child.

\end{align*}
\]

Possibilities of double-binds and splittings in systemic and dimensional spheres\(^2\).

In the `Summary table´ this topic will be displayed particularly in row a4. If a first-rate +metaposition is engaged, the subjective or objective contradictions (including all dichotomies and their double-binds/splitting) will be solved or at least relativized.

**Expressed-Emotion Concept**

“High expressed emotions (HEE) means, that the family members mention a lot of critiques towards the patient. They show animosity or are characterized by an emotional hyper-commitment. The unfavorable influence of HEE on the relapse rate of schizophrenia, depression, bipolar disorders and eating disorders is scientifically proven. However, there is

---

no recognized theory on the mechanism of action." 183

Even this concept accords with the ideas of my theory, which emphasizes the absolute importance of certain people and their attitudes toward the person affected. That absolute importance has certain consequences in the area of emotion and behavior (esp. aspect 7) and, regarding emotions that are illustrated in cells I7 and N7 of the Summary table (hyper-emotion, mis-emotion and insensibility). I believe that common literature over-interprets hyper-emotion, while neglecting mis-emotion and insensibility.

**Criticism on Certain Schizophrenia-Theories**

- Holistic concepts seem to be missing.

Questions: How can theories that have no concept of a whole explain sufficiently schizophrenic phenomena?

How can therapies solve splittings that split off anything that is not scientific and thus are split themselves, too? Don't they lack a meta-theory that integrates everything that is psychical relevant? I.e., a band for the person/system that encompasses everything and 'holds together'? The integrating instance has to lie on a meta-personal, or meta-individual level if the person is no longer able to solve the splitting by himself, or with the help of other people. 184 The index-patient and his family can be considerably relieved if the main responsibility for solving the problems lies in an instance outside of the affected people.

Here, we can also notice a disadvantage of one-sided psychiatry. I refer to the predominant personal image of psychiatry today, consisting of many self-representations, that are not being held together by a superordinate unity so that an unfavorable initial situation of therapy of schizophrenic psychoses exists.

- Many concepts solely focus on the elimination of disorders. In contrast, Eugen Bleuler said, that basic characteristic in psychoses is, that the healthy parts remain over in schizophrenia. They are not be gone but only hidden. 185

- C. Kulenkampff stated: Griesinger's statement from the second half of the 19th century, that states that mental illnesses are brain diseases was too dogmatic. His hypothesis - "schizophrenia is a somatic-based illness" - eventually became an "unreflected assertion". “The elephant of worldwide biochemical, anatomical, genetic and natural scientific research has not yet given birth to a mouse when it comes to the area of etiology.” 186

I have the impression that nothing has changed in principle about this statement to this day, even if more detailed neuropathological research results are available today.

- Most of the theories of schizophrenia are based on a positivistic principle which means,

---

184 As Antoine de Saint-Exupéry said: "For one day I will speak to you about the necessity or the Absolute, which is the divine knot that connects things." 'Citadel', Karl Rauch publishing house, p. 216, 1956.
186 In the foreword by Bateson et al. „Schizophrenie und Familie“, Suhrkamp-Verlag. 1978, p. 9.
they only accept hard facts. M. Musalek, on the other hand, is right to say: “The main problem of positivistic research approaches lays in the circumstance that nature obviously knows nothing about our principles of classification and order. We are the ones who create disease categories into which we then order the nature surrounding us. Nature does not know those forms and categories. Therefore, on positivism based schizophrenia-researches ... remained without any success.”187 R.D. Laing even went so far as to regard schizophrenia as a projection of some schizophrenic theories.188

**Why can be seen, regarding the above-named theories, inversions with their effects (sA/It) as the common denominator for the schizophrenia genesis?**189

I have stated in the previous sections in what way the inversions-impacts explain the vulnerability-stress-model, the double bond theory, the "paradoxes" (M. Selvini Palazzoli), the pathological narcissism after Kernberg and the High expressed emotions theory.

Regarding other theories:
- S. Minuchin says, that the entanglements happen because the affected individuals are not able to find a solution at the certain (sA dominated) spheres, i.e. they are not able to engage a solving meta-level.
- “Delegation” and “impossible mission” (H. Stierlin) may be explained likewise: The affected individuals are not able to fulfill the sA-demands delegated by other people.
- The common I-weakness can be explained with an Ego that is overtaxed by the sA.
- The “broken-home-situation”, often described in older literature, may be found, as well as the opposite form of fusion, hyper-proximity, etc.
- The schizophrenogenic mothers (Frieda Fromm-Reichmann) can also be found in addition to all other schizophrenogenic factors.

See also chapter `Psychotherapy of schizophrenia` in part `Psychotherapy`.

**Delusion**

Delusion can be explained by the fact that the person (P) does not judge himself and the world from a first-rate perspective, i.e. from the actual Self, but P interprets the world from foreign, distorted, partly contradictory points of view by the Its/sA. This disturbed way of thinking and interpreting cause disorders that are particularly found in aspect 18 of this work. I am assuming, that other absolutizations are also added which determine the content of the delusion. The topics of delusion reflect certain absolutizations: e.g., absolutization of one’s own responsibilities and morals → everything is my fault → delusional guilt; Others, depending on the absolutized topic: paranoia, delusional impairment, persecutory delusion,

189 For the sake of simplicity, I refer here only to the sA and not to the more comprehensive It.
delusional jealousy, megalomania, hypochondriac delusion, and so on. The connection between ideology and delusion seems obvious: ideologies believe to possess absolute truths. In other words, ideologies are more or less delusional and encourage delusion. One may assign the different delusions to certain aspects of differentiation of this work. Instead of a +A, the individuals experience strange Absolutes in their systems. "Such people live in their own solar systems ..." said F. Nietzsche once. 190

The causes are by no means only to be found in the person affected. People with delusions are often the victims of healthy people with non-clinical delusions whose price the sufferers pay. Therefore, misidentifications play an important role in delusion: I identify myself with somebody/something or I identify somebody/something with me. Exterior topics then represent the inside of P² and the other way around the exterior acquires other meanings to the person. Example of delusional jealousy: A patient who compensates his low self-esteem by representing his attractive wife like an object towards other men: “Look what a guy I am that I have such a sexy wife.” But at the same time, he develops the delusion that his wife might like other men better and he could then lose his love object* (sA), his wife. E. Bleuler: “The development of delusion seems to be less puzzling if one imagines it as a result of a comprehensible confrontation of an inner and outer conflict-situation: [e.g.,] an ambitious, young man wants to achieve great things but he does not accomplish great things. His self-esteem does not allow his own inability to be the reason for his misfortune: he protects himself from inferiority feelings by ascribing blame for his fate to the evil intrigues of other peoples. Or, a girl, who has no boyfriend because of her contact difficulties, dreams of men of much higher rank falling in love with her but she blames evil people who prevent coming together with those men.” 192 Bleuler is only able to imagine the transition from normal to psychotic by picturing a certain 'point of no return'. That would be the point, where the confrontation of the own situation with the reality becomes as painful and shattering, that one gives up the reality and is caught in a surreal world of imagination." 192

(See also about the therapy of delusion in 'Values'.)

192 I would describe that 'point of no return' as the point where a Relative became a strange Absolute (resp.It), that is not to integrate.

</table>

Analogous to the previously mentioned derivations of splitting and other schizophrenic phenomena mentioned earlier, this table is meant to illustrate some possibilities of the...
development of delusional thoughts and similar mental disorders due to inversions. Especially absolutizations and negations of different meanings and values will promote the development of delusions. Those are often about idealization or degradation of people. The table also emphasizes the fact that it is not only inversions of meanings and values (asp.18) that can cause delusions but potentially also all inversions of the other aspects. Dogmatism and anarchism, for example, do not solely cause disorders of order but may also lead to disorders of thought and judging and therefore promote delusional thinking. Or, if we are fixated on responsibility and functionality, then we will feel secure and self-confident towards other people as long as we fulfill the responsibilities and functions. If we do not fulfill them, we may become ill and even paranoid.

I want to explain this from my own experience: When I myself had to be psychiatrically treated about 30 years ago, the main reason was that I was full of absolute "musts". I believed that I had necessarily to be a good human being (also by misunderstood Christian views). I had ever to be helpful and available to my patients but also to gain a certain amount of appreciation. As long as I fulfilled those requirements I received a lot of appreciation and had a strong Ego. However, it all collapsed when I was not able to fulfill all of the requirements anymore - maybe I did not want to fulfill them either. My fellow men, especially my patients became more and more alien threatening. Everyone who entered my consulting room during this phase made me think: “That person is expecting much help, and I have to give it.” I was not aware, that my attitude made me vulnerable and that it caused me to view his wishes as unconditioned demands towards me. The patient eventually became my opponent and I became my own opponent, too. “Why is everybody asking me for everything?”, “Why do some people weirdly look at me?”, “What can I do?”, “Nobody can help me.” Fear, strangeness, despair and helplessness became overwhelming. I was only moments away from experiencing a manifest delusion, only moments away from losing my mind. Fortunately, I decided to seek professional help. I experienced a turning point when I realized that I am absolutely loved by God, that I may be, whoever I am, who does not make his love and my self dependent on whether I fulfill these or those responsibilities and functions, no matter how good or meaningful they are, or not.193

Questions:
- Can’t any ideology create delusion?
- Does not have every person or every group or society its delusion in the shape of absolutization of growth, progress, performance, perfection, feasibility, beauty and other delusions?
- What distinguishes the delusion of the healthy from the delusion of the sick? (The so-called healthy person does not suffer from it, because his delusion is still positive for him, while the delusion is sorrowfully experienced for the sick person.)

193 Although the psychotherapy did not intend this at that time, it fortunately lead me in this direction, for which I am grateful.
- Doesn't the madnesses of us "healthy" promote the madnesses of the sick?
(See also about the therapy of delusion in `Values´)

**Hallucinations**

Delusions and hallucinations are closely related. Hallucinations are sensory illusions, without a demonstrable cause of stimuli.

**Hypotheses:** While the main reason for delusions is most found in aspect 18 (thinking and judging), the main reason for hallucinations is found in aspect 16 (perception). The affected person has a contradicting perception of himself and the world. He sees, hears and feels everything in an alienated way.

I believe, like all the other psychical symptoms, hallucinations are mainly be caused by inversions.

Due to certain It/sA, the affected person views the world as though looking through a faulty pair of glasses: black and white, too clear or unclear, distorted and so on.

Acoustic hallucinations are mainly developed through internalized absolutizations of people that act like a **Homunculus** in the affected person. It speaks to him, gives advice or orders etc. It is expressions of a special strange Self (sS), that become effective here as pseudo-personal, homunculus-like "central internalization". It was pushed from a subject role and the affected into the object role. ("It commands me...", "It comments my behavior", "It threatens me" etc.) These kinds of personal voices are being created because the personal sA/It (as 'humunculi') are often stronger than some other personal forces. Acoustic hallucinations are mainly voices of introjections of absolutized people (of people as sS), that were/are loved or hated too much. Or they are a transference of pathogenic behavior patterns of people surrounding the ill person. These are usually healthy themselves but they transfer their pathogenic issues and attitudes onto others who cannot defend themselves.

I think, that phenomena such as delusions and hallucinations should not be viewed solely negative and absolutely pathological. Those disorders may also be an expression of going the right direction and may have progressive characteristics. Thus, they may also be an expression of the actual I-self. Consider, how many intuitions, illusions or predictions were thought to be abnormal and turned out to be absolutely true.

(See also about the therapy of hallucinations in `New and old`).
Depressive and Manic Reactions

"It is the phantom of our own self whose deep affinity and profound influence on our mind either damns us to hell or uplifts us into heaven" E.T.A. Hoffmann, 'The Sandman'.

Depressive and manic symptoms may be caused by every inversion that leads to certain strange-Selves.
The following graphs illustrate which sS mainly caused depressions and which cause manic symptoms.\(^\text{194}\)

\[
\text{strange-Self} \quad + \text{Hyper-sS} \rightarrow \text{Mania} \\
\quad \text{strange sS} \rightarrow \text{Schizophrenia} \\
\quad - \text{Contra-sS and 0} \rightarrow \text{Depression}
\]

This graph is meant to illustrate kinds of the strange-Selves (resp. personal Its) and their effects.

\[+^* \text{ e.g., ideals as + hyper-sS} \quad -^* \text{ e.g., taboos as } \text{contra-sS}\]

Main positions of the depressive and the manic:
The absolutized positive \((+^*)\) has to be fulfilled and the absolutized negative \((-^*)\) has to be avoided or fended off and the 0\(^*\) has to be filled.
As soon as the person goes against those requirements, he/she will become depressive.
If the person meets the requirements, he/she may become manic.

I postulated: If a person absolutizes something Relative or negates an actual Absolute, depressive and manic reactions may be the consequence. Absolutized Relatives become a strange-Self, which intrude in the actual Self and it pushes aside. The actual I can no longer live freely with the actual Self (as I-self) but will be rejected and also pushed aside.
We were talking about the subject-object-splitting and understood it as a process of the strange-I (Ego) becoming the subject instead of the actual I. The actual I becomes the object being degraded and oppressed. That is the suppressing and depression-causing side. But the

\(^{194}\) I ignore the possible causes by \(-^A\).
strange-Self will also give something 'positive': It will give exaggerated 'good' feelings, 'lust' in the sense or compensatory satisfaction. I cannot repeat enough, that it is important to not only view the strange-Self as solely negative but as ambivalent, substitute, or second-rate. The motto for that could be: It is better to experience inebriation than to commit suicide.

We discussed those two sides of the strange Self: the pro-sS (ideal*) and the contra-sS (taboo*). The ideal* gives, motivates, stimulates and makes the person happy and proud if it is being fulfilled. On the other side, it will constantly demand something and therefore it oppressively acts if it is not being fulfilled enough. And if the affected person decides to act against the ideal*, it becomes a tyrant and causes a sense of inferiority and guilt, a feeling of loss and depression. The person will keep trying with self-denial to fulfill the ideal. However, he/she becomes overtaxed and gets symptoms of depression. Along with the punishment through the strange Self, there will be a loss of the positives of the actual Self, since it is no longer the only base of the person. That mainly means loss of identity, vitality, uniqueness, freedom, self-confidence, which are all signs of depression. Therefore, depression can be viewed as a loss of the actual Absolute and as oppression through a strange Absolute (resp. strange Self).

I view mania as an expression of conformity of the person with an absolutized positive* (ideal*). A manic person has the feeling that he/she found the +Absolute or is identical with it. However, it is only a short-time fulfillment of the ideal that is giving that kind of feeling. Since the strange Self only gives substitutes, the positive feeling is not only limited but also less worth quality-wise. It remains a meager feeling of luck: A short rush, a thrill. Therefore, a manic person is not happy but more like being 'high'. Such as the term 'bipolar disorder' describes, mania and depression are two sides of the same thing - the ambivalence of the strange Self.

Mania is also protection against depression, such as depression is protection against mania. Mania is an inverse co-form of depression and vice-versa. Therefore, the depressive person has always latent manic parts and the manic person has always latent depressive parts. It is well-known that the illness proceeds in different phases. Since those phases run autonomously and do not correlate with the actual situation of the affected person, they do not appear to be explainable in a psycho-dynamic way which makes a lot of people think of them as some sort of metabolic disease. Unfortunately, we do not have enough place to discuss this problem. But if we look at the hypotheses made earlier, it becomes very clear why the named phases may appear. The main reason lays in the characteristics of the strange Self. In the first part of 'meta-psychiatry' I already mentioned how the flowing transitions of black and white, right and wrong, good and bad, positive and negate are being reduced to their opposites. The same thing happens to the mental state of a person.

---

195 The third side - the 0 - remains unmentioned here.
196 As a reminder: * means an absolutization of something Relative.
197 S. Freud saw it similarly.
Regarding the reversal of mania in depression and vice versa see paragraph "Reversal into the opposite".

Based on the strange-Selves, the person is either too far within the positive sphere or too far within the negative sphere, even if he/she is acting no more incorrectly than the healthy people around him.

Looking at it from the side of the strange-Selves, it appears thus: Such like dictators, they allow us to experience some sort of ecstasy whenever we were being good and sacrificed a large number for them. Somebody could say: Why not. I sacrifice myself for my own good, for my own ideals. Therefore I am the beneficiary. That is partly correct, and as mentioned before, the strange Self is not only the bad. The person is also doing something good for him-/herself, more exact, for what he/she thinks is his/her own Self even though it is not. But if a person sacrifices him/herself for the ideal*, he/she will receive only a substitute but not the actual reward and more often than receiving the substitute he/she will experience frustration, oppression or depression.

**REMARKS ABOUT OTHER DISORDERS**

In the following chapter, I will only briefly discuss some mental disorders.

**Obsessive-Compulsive Disorder**

"Today I know that I had 'absolute' claims as an obsessive-compulsive patient." (Ulrike S.)

A short summary of the known facts: "Psychoanalysts believe that obsessive-compulsive disorders (OCD) are being developed when children start to fear their own Id-impulses and use defense-mechanisms to reduce the resulting fear. ... The Id-impulses usually appear as obsessive thoughts, and the defense-mechanisms appear as contra-thoughts or obsessive behavior. ... It is probable that a combination of genetic tendency, disorder of the cerebral metabolism and psychical causes (such as stress) is the reason for an outbreak of obsessive-compulsive disorders. An isolated, singular cause is still unknown." 198

U.H. Peters states: "The symptoms illustrate compromises between drives, their restrictions, the demanded expiation of the super-ego and masked substitute-satisfaction, between which the ego cannot decide (ambivalence)." 199

I view the connections in a very similar way, although I would describe them slightly different and more comprehensive 200 based on the underlying concept. I believe that the causes are based on the unsolved conflicts between the actual Self and some specific

---

200 Because everything that has been absolutized can become a compulsion.
strange Selves and the conflicts within those strange Selves. The basic idea would look as followed: The actual Self strives to be free, to be unconditionally loved and always maintain to be itself. (Being allowed to have certain sexual fantasies, allowed to be aggressive and bad and so on). However, strange Selves limit that freedom of being unconditioned and only give substitute-love and substitute-freedom under certain preconditions (fulfillment of +sA-requirements and avoidance of −sA-requirements). If those requirements are not being fulfilled, the strange Selves threaten with sanctions, which cause fear within the affected person. To reduce those fears, the affected person develops an obsession to fulfill those requirements though that usually leads to short liberation only.

Psychoanalysts discovered the compromise-character of those mechanisms a long time ago. The specific person tries to develop a compromise between the Self and the strange Selves - a compromise between his actual needs and tempting promises or threats of the strange-Selves. However, he does not risk or is not able to relativize the strange-Selves because he identified him-/herself with it and views them as his own Self.

One may find a better understanding of these internal processes when compared to similar external circumstances, such as comparing the strange Self with a dictator who, like with carrot and stick lures us on the one hand with false promises but on the other hand it scares us and compels us to behave in a certain way (compulsion) if we do not obey and do not have the courage to free ourselves from him.

That view does not exclude neurobiological or genetic factors, even though I would not put too much focus on those as long as believable psycho-dynamic hypotheses exist and make causal therapy possible.

I want to give a specific example for the different views and approaches.

The case example I would like to illustrate and discuss is out of the publication “Zwangsstörungen im Kindes-und Jugendalter” (obsessive-compulsive disorders in childhood and adolescence). 201

That article is about an obsessive-compulsive disorder of a 10-year old girl, which appeared after her grandfather had passed away. The authors describe the disease progression based on scientific criteria along with the guidelines. They named possible causes and certain treatments that “did show a significant improvement but no complete remission of the symptoms”. Although a direct connection between the grandfather’s death and the onset of the obsessive-compulsive disorder of the child was evident, the significance of the grandfather’s death for the girl was surprisingly not discussed! My guess is that because of the guidelines, dealing with such "final" metaphysical issues did not fit into the concept. But what, if the girl was confronted with unsolved metaphysical questions due to the grandfather’s death, which were relevant for the development of her illness? Surely, it would be absurd to seek metaphysical problems for each kind of symptomatic. However, if there are signs of relevance such as there are in the described case, we should not ignore

them.\textsuperscript{202}

(Note: When I sent a discussion commentary to the authors of the publishing magazine with my thoughts, I received the typical answer that only scientific discussions would be published.)

I suppose that psychiatrists who do not feel responsible for such questions of belief would allow the choice to patients to seek help from a pastor. However, that does not help, because:

• there are barely any people who seek help from pastors when it comes to mental illness and
• the person would be sent away from the pastor as soon as he reckons with 'pathological problems'.\textsuperscript{203}

The dilemma: In such situations, the mentally ill person(s) are left alone with their problems if pastors reject work with mental illnesses and psychiatrists solely work scientifically. What would be an option to solve this problem? We should probably show more courage to open closed theoretical and practical systems (scientific or theological) and risk more multidisciplinarity.

\section*{Fear}

The main causes and the psycho-dynamics are very similar to the ones of obsessive-compulsive disorders. Therefore, I did not further describe those. Here are only a few remarks. Fear is not necessarily a bad sign such as living without fear is not always a good thing. Both are Relatives. That also means that no symptom has absolute importance, even if the appearance of fear is relatively negative at most times, while lack of fear is also relatively positive only.

The pathological fear has three sources, based on the dimensions:

• fear of loss of a \textit{+sA}
• fear of the manifestation of a \textit{−sA}
• fear of nothingness.

On the one hand threatens the \textit{−sA}, on the other the emptiness (0 \textsuperscript{*}) and on the third the loss of a \textit{+sA}.

\textsuperscript{202} Why one does not comfort the sick girl with the hope that the deceased grandfather lives on in heaven. Or, for the sake of completeness, if evidence of sexual assaults of the grandfather exist, which could also trigger a compulsive symptom, that one may believe that there is a superior justice (God), which will bring both in order: the abuses of the offender as well as any existing guilt feelings of the victim. Of course, such instructions should not replace other psychotherapeutic measures but supplement them.

\textsuperscript{203} "Working with pathological dynamics is not within the competence of a counseling pastor and is therefore deliberately excluded." Wilfried Veeser: ‘Skript des Seelsorge-Grundkurs 1.Block, 2007’.
P is caught in a psychical ‘Bermuda Triangle’: A +sA and its opponent drive the person in front of themselves, from one to another or into nothingness. How here the inner sA/ It make fear, madness etc. this psycho-terror - in the form of ‘carrot and stick’ (and emptiness) - is also used in totalitarian systems to suppress people.

Example of the fear causing by emptiness: "I am absolutely ignorant of, as you say, ‘the pleasure of doing nothing’. As soon as I no longer hold a book, or am not dreaming of writing one, a lamentable boredom [0*] seizes upon me. Life, in short, seems tolerable to me only by legerdemain. Or else one must give oneself up to disordered pleasure [+sA]... and even then!" (Gustav Flaubert to George Sand).204

Burn-Out

P is usually too identified with the +*, which he/she sacrifices him/herself for. In other words, P burns for something +* and then burns out. P is full of experiencing a high at first and eventually exploiting his/her Self.

At the same time, P needs too much energy to fend off what he experiences as absolutely negative (−*).

Example:
Yes, I know from where I came!
Ever hungry like a flame,
I consume myself and glow.
Light grows all that I conceive,
Ashes everything I leave:
Flame I am assuredly. F. Nietzsche, Ecce Homo.205

Pain

Every It/sA may cause pain: a +sA if it is being lost, a −sA or −0 if it appears or may appear. It mainly affects the sA that are effective in aspects 7 and 23. When it comes to sA in aspect 23 it is especially about traumata and injuries that affect the absolute-area of a person and/or absolutizations that avert the development of effective protection.

S. Freud already ascertained that nothing hurts as much as the loss of a love-object (sA). [+A however, can never be lost - only the belief in it.]

Situations of pain may also occur with positive processes (labor pain, pain when going through a reasonable separation). However, those are usually limited in time, do not become chronic and have positive results.

('Your pain today is your freedom of tomorrow'.)

**Post-Traumatic Stress Disorders**

Post-traumatic stress disorders (PTSD) occur:

- Objectively through confrontation with death, through serious injuries, through sexual abuse, rape, violent attacks, kidnapping, terror, war, torture, imprisonment, catastrophes, accidents, or diagnosis of a life-threatening disease. It can be experienced personally or through another person.
- Subjectively through intensive fear, helplessness or shock. [Cit. DSM-IV, 1996.]

There are highly differentiated concepts of treatment that are mainly based on behavioral therapeutic fundamentals. I do believe that an extension of those concepts by including good spirituality, or religion would be reasonable for the following two reasons:

1) Statistics show that people who are religious or spiritual have better chances of recovery.

2) PTSD’s have especially to do with relationships between offenders and victims and the context of problems of death. I do believe, that those difficulties are of existential importance (absolute-sphere) for the affected people and are therefore best solved based on good beliefs. Why? Such as the PTSD-therapists suppose, the trauma is best rehabilitated when there is a secure and trustworthy relationship between victim and therapist.

The offenders are usually not available. The belief in a fair or maybe even avenging God, however, may relieve the victims more than the options a therapist has. Another difficulty lies in the resolving of the victim’s feelings of guilt, vengeance, and aggression that come along with traumatizations. In the best-case scenario that would mean giving it away to a higher power such as God. More exact: An important problem is that the victim often starts viewing him-/herself as a potential offender or may become too and is not able to unite both roles in a satisfactory way unless he/she gives the problem to a higher authority. This higher authority (God) is able to avenge the sacrifice if the offender does not repent of his behavior and may show mercy if the victim him/herself becomes a perpetrator and regrets his actions.

When it comes to the mentioned 'confrontation with death', it is a question of belief if death is the last or not. Why should a psychotherapist convey a negative or no faith at all if ________________

---

206 [https://de.wikipedia.org/wiki/Posttraumatische_Belastungsst%C3%B6rung, 2/2016.](https://de.wikipedia.org/wiki/Posttraumatische_Belastungsst%C3%B6rung, 2/2016.)
there are just as many (or more) reasons for an afterlife? Why should a psychotherapist not convey a belief/faith, that reflects a relieving and liberating possibility?  

Communication Disturbances

See Relationship disorders elsewhere.

ADHD

Some brief therapeutic remarks to attention deficit hyperactivity disorder (ADHD):
Avoid the black-or-white-thinking regarding medication! Just like medication for other mental illnesses, they should be used as ‘mental crutches’. They do not heal but they might save the affected person from a breakdown. If the affected child of the family is overtaxed and the symptoms are no longer able to be compensated, taking medication is usually a reasonable option. However, the dose should be relatively low, so that the symptoms are not completely covered but remain in a certain extent. If you give too much of the drugs, you take away the children the opportunity to develop complex skills themselves. (See also G. Hüther, section "Problem Antipsychotics").
There are very good behavioral therapies available, although they are often too focused on total elimination of symptoms. To me, it seems reasonable to practice symptoms consciously sometimes, to avoid a fixation on total symptom-elimination and thus to let the child know that it is unconditionally loved beyond any symptoms and performances.
A collateral family-therapy is also important, not to seek fault on the parents' side but to relieve them, to strengthen them and to loosen unnecessary and overstraining attitudes. In the sense of 'primary psychotherapy', as described in this work later, attempts of change are ultimately secondary and subordinate to the unconditional acceptance of all involved parties.

Alzheimer's

Hypothesis: I am convinced that mental disintegration precedes cerebral disintegration. It is known that mental trauma can cause brain changes. In my experience, emotional traumas are a common cause of many dementias. Older people are increasingly confronted with existential problems (loss of meaning, serious illnesses, relatives' deaths, etc.) which are usually not diagnosed as traumas, however, they are often experienced in the same way.
In addition to these traumas, any demands can be experienced as negative Absolutes if the person affected can no longer compensate what (s)he could still handle before his/her illness but is no longer able to do so, now. In the terminology of this work, the older person

is no longer able to reach his/her +sA, to fend off the −sA and to fill inner emptiness (0). The sA burn out because they can no longer be served by the person concerned. And with them, his/her spirit goes out. They burn out like dying stars and remain in the brains only as dead nerve cells.

Every person has experienced how their thinking and remembering was blocked in an every-day situation, due to certain unsolved problems. Why should that temporary mechanism not become chronic and somatized?

It also needs to be mentioned that such psychodynamic hypotheses are rarely pursued because they are not a source of income for the pharmaceutical companies, while billions of dollars are earned only with the pharmacotherapy of dementia.

**Addiction**

See `Addiction´ in Metapsychiatry.

**Others**

I suppose that many diseases that are not primarily organic, such as psychosomatic diseases in general but also many that have multi-factorial causes such as epilepsy, rheumatism, migraine, irritable bowel syndrome, Crohn's disease, asthma, etc., are less genetic than caused by basic pre- or postnatal psychical reasons due to certain It/sA.

**Repetition for Clarification**

Mental illness may also occur due to the process of trying deep solutions, which is reflected by the term 'progressive illness'.

The opinion that a healthy person acts more correct than an ill person or that a healthy person may even be a better human is wrong. In the Christian ambit, there are often misunderstandings when it comes to the connection of 'sin' and illness, which is mostly based on certain parts of the old testament. Especially the assumption that an ill person has to be some sort of sinner is very common. Jesus disagrees with this error. We cannot automatically assume closeness to God or strong faith just because someone is healthy and well, just as pain, sorrow or illness does not indicate the distance from God or a lack of faith. But on the other way, there are positive connections between good belief and health as I try to explain in this book.

**About Anti-Psychiatry**

The list of `anti-psychiatrists´ is long. I will name the most important ones: Silvano Arieti, Franco Basaglia, Fred Baughman, Ernest Becker, Clifford Beers, Lauretta Bender, Richard

---

The anti-psychiatrists had/have different professions and criticized the established psychiatry in diverse ways. The criticism varied from radical denial to suggestions for improvement. In my view, established psychiatry has not integrated meaningful 'antipsychiatric' ideas to its own detriment. It is also regrettable that psychiatry and anti-psychiatry are contrasted in literature. Therefore I would speak better of `complementary psychiatry' instead of `antipsychiatry'.

Often used abbreviations

+ = positive
− = negative
¹ = first-rate or primary
² = second-rate (or secondary) not to be confused with coordinate (nebengeordnet)
→ = 'see or 'result is'.
* = Sign for absolutizing and / or dominance. (Often used to point to an absolutizing.)
| = a sign that the German original version has been shortened at this point.
A = the Absolute (+A = positive Absolute, −A = negative Absolute)
All ( ∀) = here strange everything, which stands in opposition to the nothing(ness).
asp. = aspect
C = general abbreviation for complexes that dominate personal and other areas of reality.
D = Dynamism D¹ = first-rate D., D² = second-rate D.
DM = Dimensions
DM = Defense-mechanisms
e.g. = exempli gratia (for example)
e.g. = for example
etc. = et cetera
fig. = figure
l = I in general ( l¹ = first-rate I, l² = strange I = ego)
i.e. = id est (that is)
ibid. = ibid.
It = dominating entity-instance, consisting of 2 or 3 cores:
   2 parts: all and nothing ( ∀/ 0) = 'dyad' or
   3 parts: Pro-sA or + sA, Contra-sA or -sA and 0 = 'triad'
It/sA resp. It/sS: if I want to emphasize the absolute role of an It-part.
KW = keyword = headword
ns = new-strange/ new-second-rate (new secondary)
No. = Number
P = Person; P¹ = first-rate personality; P² = second-rate personality (often only P labeled)
pr = psychically relevant
r = relative
R = the Relative (R represents everything that is not A or 0.)
R* = Relativistic
resp. = respectively
s = strange = second-rate (²)
sA = strange resp. second-rate Absolute
   pro-sA and contra-sA = opposing sA.
   asA = absolutistic strange Absolute
   rsA = relativistic strange Absolute
s0 (or 0) = strange, determining nothing(ness) = nihilistic
sS = strange Self
BLQC = being, life, qualities, connections
syn. = synonym
W = World, reality,
WPI = world, person, I.

209 Discussion and definition of this term as in literature - see in 'Metapsychiatry': The strange-Self (the strange personal absolute).
