

SUMMARY TABLE READ WITH ZOOM !

(Part of the publications published in <http://www.psychiatry.com>, © by Torsten Ostergaard, 2013-2025. (The links connect directly to corresponding sections.)

Overall, the table shows a new classification of the psyche, which in principle also applies to societies, and, from left to right, the occurrence of possible disorders.

The **Arrested vertical column** shows their classification in **Dimensions and Differentiations**.

The **Dimensions** include everything personal and social. I have described them in detail, for example, in the chapter ["Introduction"](#).

The **Dimensions** represent fundamental meanings (I-V) both personal and social. The sub-terms of (I) are (A) values (A) values (R) and nothing (O) are keywords for all dimensions.

The **horizontal rows** show - from left to right - the development of psychical and social disorders as schizophrenia or similar social disorders.

The column A includes **Introversion**, column B to **Extroversion**, columns C to **Psychosis**, and columns O to **Psychosis**, and columns T to **Schizophrenia** or similar social disorders.

The **Psychic Relevant** per se one focus on the top horizontal row. Below it, I listed general and personal "real" of forms, functions and actions in columns A to D as aspects.

This corresponds essentially to the classification of the psyche "Metaphysics" (A) and "Psychology" (B) in the above-mentioned publication.

I called the next big segment (columns E to K) **Emergence and Character of the I** to understand the term "I" as a new stage **emerge** created by "inversions", which dominates psychic or social reality (I) system. With **inversion**, I denote a change of fundamental meanings. As fundamental meanings (I), I suppose the above-mentioned dimensions.

I.e., I describe, relative to (I) and other fundamental meanings are contained 1) aspect of reaction. The content of such fundamental meanings is algorithmic. Typical examples are delusions. These, as well as similar delirious attitudes in families or the individual, occur with an absoluteness claim that absolutizes something Relative and at the same time negates and excludes others. This leads to fundamental delirious delusions. The column J should show with the symbol "I" that its make stage **psychic** and **social** or social forms.

The I have another effect on the personal system in the long term than in the short term. Column K shows the unfavorable long-term character of the Es in general from I to N and from O to V especially in personal ones. Finally, all possible symptoms of **Schizophrenia** or similar social disorders are listed exemplarily from column T to V.

A process important to understand the genesis of the disorder, which I called **Reversal and Extension** and described below in "Metaphysics" - i.e. every inversion starts with such a way, that it can cause all sorts of disorders, as well as one disorder can be caused by all sorts of inversions. Here I distinguish obligatory and optional effects ("main and secondary impact-effects").
